SQUIBB'S MATERIA MEDICA
1919 EDITION

UNIV. OF CALIFORNIA
AT LOS ANGELES
LIBRARY

ANNUAL REPORT

OF THE

STATE OF

SQUIBB'S MATERIA MEDICA

== 1919 Edition ==

A COMPLETE ALPHABETICAL LIST OF THE SQUIBB PRODUCTS, including all the articles of the United States Pharmacopœia (IXth Revision) and of the National Formulary (IVth, 1916, edition), together with the Non-official Chemicals, Pharmaceuticals and Newer Remedies in general use; setting forth their Origin, Latin and English Titles, Synonyms, Physical and Chemical Characteristics, Incompatibilities, Antidotes, Therapeutic Indications, Doses, etc.

ALSO A COMPREHENSIVE DESCRIPTIVE LIST OF TABLETS for Internal and for Hypodermic Use; of BIOLOGICAL PRODUCTS, and of REAGENTS, including Test Solutions, Volumetric Solutions and Indicators.

PUBLISHED FOR
THE PHYSICIAN AND THE SURGEON

The Squibb Chemical and Pharmaceutical Laboratories, Brooklyn, N. Y.

very truly yours.
E. R. Squibb

DR. E. R. SQUIBB

"The late Dr. Edward R. Squibb was a true gentleman of the older school, whose thoughts, words and actions were guided by those sterling qualities of principle, honor and integrity. One need but look at his photograph to discern that he was a good and noble man. His character is in his face. I honor and revere the name of this distinguished gentleman whose life work was devoted to the highest ideals in the practice of medicine and pharmacy. The house of E. R. Squibb & Sons stands today as a living monument to the honor, integrity, zeal and devotion of its founder. The medical and pharmaceutical professions alike owe a debt of gratitude to Dr. Edward R. Squibb which they can never pay. Although Dr. Squibb passed on some few years ago, yet he still lives. In the business which he established half a century ago he lives. His rare skill, his honor, his integrity and his pride are there. The influence of his noble life and character will never die; it will live on forever."

The Squibb Research and Biological Laboratories, New Brunswick, N. J.

The One Hundredth Anniversary of the Birth of Doctor Squibb

On July The Fourth, 1819, the forty-third anniversary of Our Nation's birth, was born of Quaker parents, in Wilmington, Delaware, Edward Robinson Squibb, who, as a man, was destined to stamp upon pharmacy and medicine an ethical imprint which time cannot efface. Receiving good early education in the public schools of his native town, he served five years as apprentice in pharmacy in the drug stores of Warder Morris and J. M. Sprague of Philadelphia, where he earned sufficient money to pay for a medical education. He graduated from Jefferson Medical College in 1845.

During the two years he practiced medicine in Philadelphia he continued scientific investigation serving his *alma mater* as Clerk of Clinics, Assistant Demonstrator of Anatomy and Curator of The Museum. In 1847 he joined the U. S. Navy.

On March 29, 1847, Dr. Squibb reported at the Philadelphia Navy Yard for duty on board the U. S. Brig Perry; and on April 26, 1847, he received his appointment as Assistant Surgeon, his papers being signed by President Polk. Three weeks later he sailed on an expedition, the purposes of which were in connection with the Mexican War and the breaking up of the South American slave trade as far as it was carried on in vessels owned in the United States. During July, 1849, The Perry returned to Hampton Roads, discharged at Norfolk and was put out of commission.

On August 11, 1849, Dr. Squibb reported at the Brooklyn Navy Yard for duty on board the Store Ship Erie and on September 5 sailed for The Mediterranean. While on this cruise he was ordered to The Frigate Cumberland on which he returned to The Charlestown Navy Yard in July, 1851 and left Boston, having been ordered to the Brooklyn Naval Hospital. Here he was assigned to temporary duty on the S. S. Mississippi, the Str. Allegheny and to Naval Rendezvous and finally was attached permanently to the Naval Hospital.

During Dr. Squibb's active service at sea he had studied how the national medical service could be improved. Particularly, he had noted the poor quality of ammunition and of medicines furnished the Navy and it was largely through his influence that ammunition and medical supplies were exempted from competitive bids, quality being given preference to price. But Dr. Squibb did more than this. Not only did he exert himself to have good supplies obtained from outside sources but also he himself endeavored to produce trustworthy pharmaceuticals. Consequently he established a laboratory in an outbuilding belonging to the Naval Hospital, equipping it largely with apparatus of his own manufacture or of his own invention.

In 1853, at this Naval Laboratory Dr. Squibb perfected the still which he had devised for the making of the Squibb Ether, which was soon recognized to be and still is The Standard Anæsthetic Ether. Here also he made the Squibb stills for the manufacture and purification of Chloroform and his original process produces after all

these years the best anæsthetic chloroform, one safer and otherwise better than that of the U. S. P. Here he devised also methods and apparatus for subliming benzoic acid and for making calcium chloride; also, he invented and built mills for powdering drugs of all sorts. He discovered and established suitable methods for producing phosphoric acid and for crystallizing ammonium phosphate. As today, so sixty years ago, Dr. Squibb's mercurials were unequalled; and the processes worked out and perfected by Dr. Squibb for the making of extracts and fluidextracts have not been improved upon since his day. To mention the perfection of aconite and ergot preparations, and of other pharmaceutical products and processes, all from Dr. Squibb's own brain and hands, while of great interest, would occupy a treatise by itself.

From the start, then, Dr. Squibb was successful in producing pharmaceuticals and chemicals of the finest quality. The Historian in the U. S. Naval Medical Bulletin Vol. IX, No. 3, writes, "At first only a few standard mediums were prepared for the use of the Naval Hospital at Brooklyn, but gradually, other hospitals were supplied until the value (of the Squibb Laboratory) being recognized Congress authorized the Navy Department to establish a larger pharmaceutical laboratory for the manufacture of important articles on the supply table." In this new laboratory Dr. Squibb, the instigator and founder became the chief factor and here he worked until he entered civil life to establish his own laboratory.

In 1857 Dr. Squibb resigned his naval position. Soon after its establishment Congress closed

the laboratory which had been established at the Naval Hospital. The War Department, however, impressed with the utility of the laboratory as established by Dr. Squibb and with the unequalled quality of the drugs produced by him, sought to re-establish it but failed on account of political opposition. It was then that Dr. R. S. Satterlee, Chief Medical Purveyor of the Army, persuaded Dr. Squibb to establish a laboratory of his own. Dr. Satterlee assured Dr. Squibb that if he would make drugs of as good a quality as he made in the Naval Laboratory, the U. S. Government would buy of him such products as it might need. Consequently in 1858 The Squibb Chemical and Pharmaceutical Laboratories were established and The House of Squibb was founded.

For nearly fifty years Dr. Squibb personally worked in his own establishment. Soon after beginning his work a fire which started in the ether house destroyed the laboratories and severely injured Dr. Squibb. However, he rebuilt his laboratories and although crippled and rendered a constant sufferer he continued to labor and toiled faithfully in the interest of scientific pharmacy and medicine until his death, which occurred on October 25, 1900.

Although Dr. Squibb is no more he lives in the laboratories which he established, and those upon whom his mantle has fallen carry on the work as conscientiously as he did, being actuated by the same motives, governed by the same policy and making the same earnest effort to spread the influence which originated with Dr. E. R. Squibb.

The Sixtieth Anniversary of the Founding of the House of Squibb

It is now sixty years since the House of E. R. Squibb and Sons was founded. Instituted not merely for business, the object of which is profit, it began its career with unique intentions. Its inception was in a sense of duty. The circumstances in which Dr. Squibb found himself when at the Brooklyn Naval Hospital made him realize that as a citizen and as a naval officer he owed to his country an effort to better certain conditions, and this obligation he immediately set about to fulfil.

The integrity of the products made and offered by Dr. Squibb gained for the Squibb Laboratories the confidence, not only of the United States Government, but of physicians and surgeons in civil practice as well. Quality, which to Dr. Squibb had always been first in importance, was appreciated by others. He had realized that in the treatment of the sick the physician was handicapped unless he had at hand remedies which were true to their formulæ and of known potency. And when the physician himself, by using the Squibb drugs, saw their effect, he, too, understood the necessity of trustworthy products. Thus the Squibb ideal proved a success.

Because of this, it always has been a principle of the Squibb Laboratories to select, with the most scrupulous care, all crude materials used in manufacture and also to devise correct methods of manufacturing.

In order further to assure perfect results, Dr. Squibb established a Control Laboratory, in which

experienced chemists are employed to examine and test every lot of each product as soon as it is made and before it is put into stock. This was an additional check on the quality of the finished drug; therefore, each article which bears the Squibb label represented then, as to-day, a product in strict conformity with highest standards.

The rapid and wide-spread demand for drugs of Squibb Quality soon made expansion imperative, so that to-day not only are the original laboratories enlarged, but new ones have sprung up in various parts of the Union. For instance, The Squibb Chemical and Pharmaceutical Laboratories, located in Brooklyn, occupy an entire block with overflows in other parts of the city. The Squibb Chemical, Biological and Research Laboratories, located in New Brunswick, New Jersey, occupy over fifty-six acres. In these New Brunswick Laboratories are made the Squibb Biological and Bacteriological Products, including the Squibb Antitoxins, Serums, Vaccines, Leucocyte Extract, etc., etc. Also the Squibb Mercurials including Mercury Bichloride, Calomel, etc. Also the Dakin Chlorinated Antiseptics and Disinfectants, including Chloramine-T, Dichloramine-T, Chlorcosane, Halazone, etc. Further, in New Brunswick, N. J., is located the Squibb Ether Plant, whence comes the Squibb Ether, of one quality only, the best that can be made for anæsthesia.

At Berlin, N. H., are the Laboratories for the manufacture of the Squibb Chloroform, located there because in Berlin, N. H., there is available the purest chlorine at the lowest cost.

At Richmond, Cal., are situated the Labora-

tories for the purifying, testing, bottling and shipping of The Squibb Mineral Oil, known as Liquid Petrolatum Squibb, Heavy (Californian). These laboratories are located there because only in California is found the naphthene oil, a hydrocarbon superior not only to all other American mineral oils, but also to the Russian oils. From this Californian highest quality crude is specially refined under Squibb Control, for internal use, the unequalled Squibb Mineral Oil, which maintains a high and correct viscosity in the intestine, where it does its work.

That the Squibb policy of maintaining *Uniform Purity and Efficacy* and, therefore, *Full Reliability* directs all the activities of the Squibb Laboratories is apparent from what has been said above; it is evident also from the fact that when the Pure Food and Drugs Act was passed in 1906, The House of Squibb did not have to change any of its standards, and it is a matter of record that the products supplied under the Squibb Label always have been and still are of a quality better than that which is demanded by the United States Pharmacopœia and by other recognized authorities.

It must, therefore, be obvious that the Squibb Laboratories are devoted exclusively to the production of medicinal agents of the highest quality, true to their name and their formulæ, products the best that can be made for the purposes intended: and that in this way the Squibb Laboratories are endeavoring to serve efficiently the medical profession in whatever manner such service can be rendered most acceptably.

E. R. SQUIBB & SONS.

Foreword

SQUIBB'S MATERIA MEDICA is, in part, a conspectus of the products of the Squibb Laboratories. In addition, however, to descriptions of these Squibb products, which consist of preparations of the U. S. P. and of the N. F. and also of many other approved medicinal chemicals, galenicals, etc., there are given facts relating to a large number of non-official and newer remedies which are approved by the Council of Pharmacy and Chemistry of the American Medical Association, but which are not offered under the Squibb label.

While the scope of SQUIBB'S MATERIA MEDICA is very broad, it gives full yet concise information concerning each product. Of this it sets forth source; physical, chemical and pharmaceutical characteristics; therapeutic uses; doses; incompatibilities; antidotes; etc. It is, therefore, a trustworthy compendium of the approved materia medica of to-day and if kept at hand for ready reference, will prove to be a valuable aid to the physician in prescribing and of practical use to the pharmacist in compounding.

This 1919 edition of SQUIBB'S MATERIA MEDICA, in the character and the arrangement of its contents, is similar to its predecessors. However, a large number of additions have been made to it, and the names of such products as have become obsolete, since the preceding edition was issued, have been omitted. All descriptive notes

have been revised carefully and those which concern official products now accord with the U. S. P. IXth Revision, which became official September 1, 1916. The list of these is complete.

As regards the preparations of the National Formulary, all are listed and described, but only those which are considered satisfactory from pharmaceutical and therapeutical standpoints, or which are in more or less common use by the medical profession, are made and sold by us.

On the following pages the names of all products which are made by us and furnished under the Squibb Label are printed in bold type, followed by the word Squibb thus:

Bismuth Subcarbonate Squibb

while the names of products *not* offered by us but which are included in the list in order that it may be complete, are printed in lighter face type, thus:

BENZIN, PETROLEUM, PURIFIED.

The description of an article of the U. S. Pharmacopœia begins with its Latin title simply; the description of an article of the National Formulary begins with its Latin title followed by N. F.; while in the case of a product which is neither U. S. P. nor N. F. the Latin title is omitted.

The chemical formula of the product described is given whenever possible.

By "Average Dose" is meant the dose given in the U. S. P. IXth Rev. or in the N. F. IVth Ed. The word "Dose" alone indicates that no dose is given by the U. S. P. or the N. F. and

that the dose suggested is that approved by those considered to be authority.

It should be borne in mind while using SQUIBB'S MATERIA MEDICA that each Squibb product is made from first quality crude material, selected in accordance with the Squibb standards for crude drugs, and is worked by experts who exercise the most scrupulous care in each step necessary to produce a therapeutically active product.

Medicinal Tablets have become an essential part of the physician's armamentarium. The list of the Squibb Tablets comprises not only those composed of a single drug but also some approved combinations which are recommended and employed by internists.

In the manufacture of these Squibb tablets, only drugs of the Squibb quality are used and only expert skill is employed in their production. Since experience has proved that in the majority of cases carefully controlled compression produces the best tablet, we make use now of this method except in a very few instances in which the "moulded form" offers some advantage.

The coating of the Squibb tablets, listed as "coated," completely masks the taste of the drugs contained in the tablet; prevents loss of volatile ingredients; and hinders chemical reaction between ingredients which should be kept separate until in the stomach, *e.g.*, Bland's Tablets. Tablets Bland Squibb are efficacious without exception and, therefore, are preferred by all internists. The reason for this is, the iron and alkali carbonate are so mingled and the tablet so coated

that no combination of the two takes place until, after swallowing, the two chemicals are released and nascent ferrous carbonate is formed in the gastro-intestinal tract.

Because of the method of manufacture and the permanent solubility of the coating all Squibb Tablets, coated or uncoated, may be depended upon to disintegrate quickly and completely in the stomach, thus insuring speedy therapeutic action. This is true even of those tablets which contain insoluble medicaments such as acetanilid, bismuth salts, acetphenetidin, salol, and the like.

The *Titles of the Squibb Tablets* deserve attention and study. In accordance with the ethical principles formulated by the American Medical Association, we have adopted pharmaceutical titles in all instances and have discarded from the labels titles derived from diseases for which the tablet may be used or which otherwise might be therapeutically suggestive.

Biological Products, while comparatively new as remedial agents, are now recognized to be very valuable for the treatment of certain diseases. The Squibb list of Biologicals includes all that to-day are recognized to be of value and they are classed as Antitoxins; Serums; Bacterial Vaccines (Bacterins); Hæmostatics, as Thromboplastin; also Leucocyte Extract; Smallpox Vaccine, and Pasteur's Anti-Rabic Treatment.

Trustworthy Reagents are of prime importance in any laboratory work. Therefore we have added to our list certain Analyzed Reagents. As the quantity of impurity in chemicals used for reagents is small, the amount taken for analy-

sis may not be sufficiently large to make the impurity apparent. It is noteworthy then, that of the Squibb Analyzed Reagents, enough is analyzed to insure either the absence of any impurity or an accurate determination of the amount present. On our labels either the absence or the exact amount of impurity—together with the quantity analyzed—is stated. No labels are kept in stock. New labels are printed for each lot of reagents analyzed.

E. R. SQUIBB & SONS.

January, 1919.

PART I

Drugs and Chemicals

Comprising Drugs, Chemicals and Pharmaceuticals of the United States Pharmacopœia IXth Revision and the National Formulary IVth Edition, Together With Some Non-Official and New Remedies in General Use

The DOSES are those for adults by the mouth, unless otherwise stated. Of the official products the average doses as published in the U. S. Pharmacopœia IXth Revision and the National Formulary IVth Ed. are given.

To determine the fraction of the adult dose suitable for *children* of different ages, divide the age (in years) by 12 plus the age. Thus: for a child 2 years old the proportionate dose is 2 divided by (12+2), or $1/7$ that for adults.

In the case of powerful narcotic drugs about one-half this proportion holds; whereas of cathartics two or three times this proportion is usual; and children also bear belladonna preparations, pilocarpine, arsenic and mercury well.

The dose for *hypodermic* injection is ordinarily one-half to two-thirds, the *rectal* dose one and a half to double, that by mouth.

"Av. Dose," or "Aver. Dose," stands for average dose; "Cc." for cubic centimeter; "Gm." for gramme or grammes; "gr." for grain or grains; "mil" (the new U. S. P. succedaneum for "Cc.") for milliliter; "min." for minim or minims; "g. s." for glass-stopper.

The solubility statements apply at 25°C.

An * indicates the form supplied on unspecified orders.

Those products whose titles are preceded by an ⊕ are included in "Useful Drugs," prepared under the direction and supervision of the Council on Pharmacy and Chemistry of the American Medical Association.

A † means that the item is covered by the Harrison Law, and therefore must be ordered on the official narcotic order blank.

ABSINTHIUM.

Absinthium, N. F.; Wormwood; Madderwort; Vermuth. Dried leaves and flowering tops of *Artemisia Absinthium* (Fam. *Compositæ*). Aromatic odor; very bitter taste. Acc. to Council on P. & C. of A. M. A., absinthium is an "obsolete aromatic bitter, without advantage over gentian." Average Dose: 30 grains (2 Gm.).

⊕ **Acacia, Squibb**

* Granulated or Powdered carton. lb. ; ¼ lb.

Acacia; Gum Arabic; Gum Acacia. Dried gummy exudation from *Acacia Senegal* and other African species of *Acacia*. Great care is exercised in selecting a good market grade. Dirt and pieces of bark and twigs, invariably present in the whole tears, are completely removed by a special process before granulating or powdering the gum; hence the article here offered is exceedingly acceptable for pharmaceutical use. Soluble slowly and almost completely in 2 parts water; insoluble in alcohol, ether, oils. Demulcent; Vehicle for water-insoluble substances; Emulsifier; Adhesive. Incompatible with mineral acids, alcohol, ether, ammonia, tartar emetic, strongly alcoholic or ethereal tinctures, fluidextracts.

ACETAMIDOSALOL. See Salophen.

⊕ **Acetanilid, Squibb**

* Crystals or Powdered carton. lb. ; ¼ lb.

Acetanilidum; Phenylacetamide; Antifebrin. C_8H_9NO . Monacetyl derivative of aniline. 1 Gm. dissolves in 190 mls (Cc.) water, 3.4 alcohol, 3.7 chloroform, 5 glycerin, 17 ether. Antipyretic, Analgesic, Wound Antiseptic. Average Dose: 0.2 Gm. (3 grs.) When mixed with nitrous ether, acetanilid yields a solution turning yellow then red on standing. Antidotes: stimulants; atropine or strychnine subcutaneously; oxygen. (See also Powder; Tablets [Part II].)

Acetone, Squibb

tin, lb. ; ¼ lb.

Acetonum; Dimethylketone. Not less than 99 percent. C_3H_6O . Perfectly free from empyreumatic substances, and containing no weighable impurities. Sp. gr. about 0.790. Miscible with water, alcohol, ether, chloroform, most volatile oils. Inflammable. Keep protected from fire. Pharmaceutical Solvent, Reagent.

ACETONE-CHLOROFORM. See Chlorbutanol (Chloretone).

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

ACETOZONE.

Acetyl-benzoyl Peroxide. Soluble in 1000 parts water, 20 oil, slightly in alcohol, moderately in ether or chloroform, but slowly decomposing in these solvents and on contact with alkalis and organic matter. Marketed only as 50 percent. mixture with inert absorbent powder. Antiseptic, Disinfectant. **Dose:** 3 to 5 grains (0.2 to 0.3 Gm.), usually in dilute solution.

⊕ **Acetphenetidin, Squibb**

carton, oz.

Acetphenetidinum; Acetparaphenetidin; Para-Acetphenetidin; Phenacetin. $C_{10}H_{13}NO_2$. Monacetyl derivative of para-amidophenetol. White, shining, odorless, tasteless, crystalline powder. 1 Gm. dissolves in 1310 mls (Cc.) water, 15 alcohol, 14 chloroform, 90 ether. Antipyretic, Analgesic. **Average Dose:** 5 grains (0.3 Gm.). **Antidotes:** same as of Acetanilid. (See also Tablets [Part II].)

ACET-THEOCIN-SODIUM.

Soluble Theocin. White powder; 60 percent. theocin. Soluble in about 20 parts water; insoluble in alcohol, ether. Acids precipitate theocin. Diuretic. **Dose:** 3 to 5 gr. (0.2 to 0.3 Gm.).

ACET-THEOPHYLLIN-SODIUM. Same as Acet-theocin-sodium.

⊕ **Acid Acetic, Squibb**

bottle, 5 lbs., per lb. ; lb. ; ¼ lb.

Acidum Aceticum. 36 to 37 percent. $C_2H_4O_2$. Caustic, Rubefacient; in diluted form (vinegar), antidote to alkalis. **Average Dose:** 5 minims (0.3 mil [Cc.]), diluted.

Acid Acetic Anhydride, Reagent. See Reagents (Part IV).

ACID ACETIC DILUTED.

Acidum Aceticum Dilutum. Assays 5.7 to 6.3 percent. $C_2H_4O_2$. Miscible with water or alcohol. Refrigerant, Astringent. **Average Dose:** 30 minims (2 mls [Cc.]).

Acid Acetic Glacial, Squibb

g. s. bottle, lb. ; ¼ lb. ; oz.

Acidum, Aceticum Glaciale. The strongest acid obtainable by redistillation is subjected to careful recrystallization, which raises its strength to 99.5 percent. (as against 99 percent. in U. S. P.) and shuts out impurities. Caustic, pure. **Antidotes:** magnesia, chalk, soap and water, or lime water; emetics; oil and demulcents. (See also Reagents [Part IV].)

⊕ **Acid Acetylsalicylic, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Acetylsalicylic Acid, $C_9H_8O_4$, is commonly known by the trade name "Aspirin." The article here offered is of highest purity; free from uncombined salicylic acid. White, odorless needles; acidulous taste. Soluble in about 300 parts water, 3 alcohol, 20 ether; readily in chloroform. Decomposed by heat, moisture, diluted acids, alkalis and their carbonates and bicarbonates. Antirheumatic, Analgesic, Antipyretic, like salicylic acid, but better borne it is claimed. **Dose:** 5 to 15 grains (0.3 to 1 Gm.). Should not be dispensed with quinine or its salts, lest poisonous quinotoxin be formed. (See also Tablets [Part II].)

Acid Arsenous. See Arsenic Trioxide.

⊕ **Acid Benzoic, Squibb** tin, lb. ; ¼ lb. ; oz.
Synthetic (from toluol). Solubility, dose, etc.: same as of following.

⊕ **Acid Benzoic from Benzoin, Squibb**
tin, lb. ; ¼ lb. ; oz.

Acidum Benzoicum; Flowers of Benzoin. $C_7H_6O_2$. True or natural Benzoic Acid, obtained from gum benzoin by sublimation. White or yellowish, lustrous scales; pungent, acid taste. 1 Gm. dissolves in 275 mls (Cc.) water, 2.3 alcohol, 4.5 chloroform, 3 ether, 23 oil turpentine; soluble in oils. Borax or sodium phosphate increases aqueous solubility. Antiseptic, Diuretic. **Average Dose:** 8 grains (0.5 Gm.). Keep well stoppered, in cool place. Readily volatilizes in warm room; darkens on exposure to light.

Acid Boracic. See Acid Boric.

⊕ **Acid Boric, Squibb**
Granulated or * Impalpable Powder
tin, lb. ; ¼ lb.

Impalpable Powder 3-oz. sifter top tins, per doz.

Acidum Boricum; Boracic Acid. H_3BO_3 . Very high grade, carefully recrystallized and free from borax, chlorides, sulphates, heavy metals, etc. Notwithstanding the well-known difficulty of pulverizing boric acid, due to the peculiarly slippery character of the crystals, the powdered acid here offered has been reduced to an impalpable powder in chaser mills, being what is termed an "air-floated" powder, the finest it is possible to produce. This form is very desirable for use as a dusting powder, for insufflation, for antiseptic dressings, in eye surgery and in prescription work generally. 1 Gm. dissolves in 18 mls (Cc.) water, 18 alcohol, 4 glycerin. Mild Antiseptic and Astringent. Used in conjunctivitis, cystitis, wounds, etc. **Average Dose:** 8 grains (0.5 Gm.). (See also Reagents [Part IV]; Tablets [Part II].)

ACID BROMAURIC.

Acidum Bromauricum, N. F. $HAuBr_4 \cdot 5H_2O$. Dark red-brown, odorless crystals or granular masses; metallic, acid taste; 32 percent. gold. Melts at about $27^\circ C$. Very soluble in water, alcohol. Asserted Alterative, but employed principally for preparing Solution Gold and Arsenic Bromide. **Average Dose:** $\frac{1}{10}$ grain (0.006 Gm.).

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Acid Carbolic Crude, Solution. See Solution Acid Carbolic.

Acid Carbolic Crystals. See Phenol.

ACID CARBOLIC IODIZED. See Phenol Iodized.

ACID CHROMIC. See Chromium Trioxide.

Acid Chromic Reagent. See Reagents (Part IV).

ACID CHRYSOPHANIC, so-called. See Chrysarobin.

⊕ **Acid Citric (Cryst.), Squibb** bottle, lb. ; ¼ lb.

Acidum Citricum. $C_6H_8O_7 \cdot H_2O$. Tribasic organic acid usually obtained from juice of limes or lemons. Recrystallized. (99.5 percent.). 1 Gm. dissolves in 0.5 mil (Cc.) water, 1.8 mils alcohol, 30 ether; freely soluble in glycerin. Antiscorbutic; substitute for lemon juice, and for diluted hydrochloric acid in hypoacidity. **Average Dose:** 8 grains (0.5 Gm.). Used externally pure or in 5 to 10 percent. solutions. (See also Reagents [Part IV].)

Acid Cresylic. See Cresol.

ACID DIETHYLBARBITURIC. See Barbital.

ACID FORMIC.

Acidum Formicum, N. F. 24 to 26 percent. $HCOOH$. Clear, colorless, strongly acid liquid; pungent odor; sp. gr. about 1.058. Miscible with water, alcohol, glycerin. Caustic irritant; Diuretic. **Average Dose:** 5 minims (0.3 mil).

Acid Gallic, Squibb carton, lb. ; ¼ lb. ; oz.

Acidum Gallicum; Trihydroxybenzoic Acid. $C_7H_6O_5 \cdot H_2O$. Prepared from tannic acid, of high purity, and free from tannin. 1 Gm. dissolves in 87 mils (Cc.) water, 4.6 alcohol, 10 glycerin, 190 ether; almost insoluble in chloroform. Astringent. **Average Dose:** 15 grains (1 Gm.). Applied topically pure or in strong solution. Incompatible with ferric and silver salts, potassium chlorate or permanganate, lead acetate or opium in solution. (See also Reagents [Part IV].)

Acid Gallotannic. See Acid Tannic.

Acid Hydriodic Diluted, Squibb g. s. bottle, lb.

31.25 mil ampuls, 2 in box, per box

Acidum Hydriodicum Dilutum. Contains 9.5 to 10.5 percent. HI. Made by process superior to official one, and insuring a much cleaner and more stable product. Colorless or pale-yellow, odorless liquid; sp. gr. about 1.100. Miscible with water and alcohol. Alterative, acting like potassium iodide. **Average Dose:** 8 minims (0.5 mil [Cc.]), well diluted, after meals. (See also Syrup.)

Acid Hydrobromic, Squibbg. s. bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Highly pure, made by special process, and adjusted to 34 percent. HBr, equivalent to just half the bromine strength of potassium bromide, in place of which it is quite generally used. It also serves for making official diluted hydrobromic acid by mixing 5 parts of it with 12 parts distilled water. **Dose:** 5 to 10 minims (0.3 to 0.6 mil [Cc.]), well diluted. **Antidotes:** magnesia or alkaline carbonates. (See also Reagents [Part IV].)

Acid Hydrobromic Diluted, Squibbparaffin s. bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Acidum Hydrobromicum Dilutum. Contains 9.5 to 10.5 percent. HBr. Colorless liquid, sp. gr. about 1.076. Nervine. **Average Dose:** 15 minims (1 mil [Cc.]). This acid will be sent on orders for hydrobromic acid when no strength is specified.

⊕ Acid Hydrochloric, Squibbg. s. bottle, 6 lbs., per lb. ; lb. ; $\frac{1}{4}$ lb.

So-called "C. P." *Acidum Hydrochloricum*; Concentrated Muriatic Acid. Contains 31 to 33 percent. HCl. An exceptionally pure quality. Sp. gr. about 1.155. Used pharmaceutically and technically. **Antidotes:** chalk, magnesia; emetics; albumin and demulcents. (See also Reagents [Part IV].)

⊕ ACID HYDROCHLORIC DILUTED.

Acidum Hydrochloricum Dilutum. Contains 9.5 to 10.5 percent. HCl. Sp. gr. about 1.049. Digestive Acid, Antiseptic. **Average Dose:** 15 minims (1 mil [Cc.]).

⊕ Acid Hydrocyanic Diluted, Squibb ; oz.

Acidum Hydrocyanicum Dilutum; Dilute Prussic (Cyanhydric) Acid. Contains 1.9 to 2.1 percent. HCN. The improved method of manufacture gives an acid which is not very prone to decomposition. But however made, the acid is liable to eventually become discolored, and is then unfit for use. Antispasmodic, Cough Sedative; Antipruritic (only on unbroken skin), in 1:8 to 16 lotions or ointments. **Average Dose:** $1\frac{1}{2}$ minims (0.1 mil [Cc.]). **Antidotes:** hydrogen dioxide freely by mouth and subcutaneously, or arsenic antidote with some iron sulphate, then emetics; ammonia or atropine; brandy later.

Acid Hydrofluoric Reagent. See Reagents (Part IV).

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Acid Hypophosphorous, Squibb

g. s. bottle, lb. ; ¼ lb. ; oz.

Acidum Hypophosphorosum. 30 to 32 percent. HPH_2O_2 . Colorless, odorless liquid; sp. gr. about 1.130; miscible with water. Serves for preparation of diluted acid.

Acid Hypophosphorous Diluted, Squibb

g. s. bottle, lb. ; ¼ lb. ; oz.

Acidum Hypophosphorosum Dilutum. 9.5 to 10.5 percent. absolute acid. Used as Nerve Tonic; ingredient of compound hypophosphite preparations. **Average Dose:** 8 minims (0.5 mil [Cc.]). Incompatible with iodine, arsenical salts, cupric and ferric salts, and sulphuric and sulphurous acids.

Acid Lactic, Squibb

bottle, lb. ; ¼ lb. ; oz.

Acidum Lacticum. High quality. 85 to 90 percent. $\text{C}_3\text{H}_5\text{O}_3$, as against 75 percent. in previous U. S. P. Colorless or faintly yellow, syrupy, nearly odorless liquid; acid taste. Freely miscible with water, alcohol or ether; insoluble in chloroform. Caustic in 50 to 80 percent. solution; Astringent internally; also Reagent. **Average Dose:** 30 minims (2 mils [Cc.]), well diluted. Readily absorbs moisture on exposure, thereby becoming weakened.

ACID METHYLENOCITRYLSALICYLIC. See Novaspirin.

Acid Molybdic Reagent. See Reagents (Part IV).

Acid Muriatic. See Acid Hydrochloric.

⊕ **Acid Nitric, Squibb** g. s. bottle, 7 lbs., per lb. ; lb. ; ¼ lb.

Acidum Nitricum; so-called "C. P." Concentrated Nitric Acid; Aqua Fortis. 67 to 69 percent. HNO_3 . An especially pure product. Sp. gr. about 1.403. Caustic. **Antidotes:** magnesia, chalk, lime water, or soap and water; emetics; oil, demulcents. (See also Reagents [Part IV].)

Acid Nitrohydrochloric, Squibb

g. s. bottle, lb. ; ¼ lb.

Acidum Nitrohydrochloricum; Aqua Regia. A strong aqueous solution containing hydrochloric acid, nitric acid, nitrosyl chloride and chlorine. Yellow, fuming, very corrosive liquid. Caustic; also used as Hepatic Stimulant. **Average Dose:** 3 minims (0.2 mil [Cc.]), well diluted. **Antidotes:** magnesia, chalk, lime water, or soap and water; emetics; oil and demulcents.

. ACID NITROHYDROCHLORIC DILUTED.

Acidum Nitrohydrochloricum Dilutum. Two-ninths strength of preceding article. Used in biliary calculi, dyspepsia, etc. **Average Dose:** 15 minims (1 mil [Cc.]).

Acid Oleic, Squibb bottle, lb. ; ½ lb. ; ¼ lb.

Acidum Oleicum; Elaïc Acid. Obtained from fats. $C_{18}H_{34}O_2$. Yellowish or brownish-yellow, oily liquid, becoming darker and absorbing oxygen on exposure. Sp. gr. about 0.895. Soluble in alcohol, chloroform and oils. Because of its freedom from stearin and allied fatty acids, it produces oleates which are more rapidly and completely absorbed than ordinary oleates, and are free from that greasy property which is so objectionable. Also Reagent.

Acid Ortho-Hydroxybenzoic. See Acid Salicylic.

Acid Oxalic, Squibb bottle, lb. ; ¼ lb.

$H_2C_2O_4 \cdot 2H_2O$. Of very high purity; specially recrystallized, free from calcium sulphate and chlorides. Transparent granules; very acid taste. Soluble in water or alcohol. Emmenagogue, Sedative. Dose: ½ to 1 grain (0.03 to 0.065 Gm.), in sweetened water. Antidotes: calcium saccharate, syrup lime, lime water, or magnesia, then emetics. (See also Reagents [Part IV].)

⊕ **ACID PHENYLCINCHONINIC.**

Acidum Phenylcinchoninicum; Phenyl-quinoline-carboxylic Acid; Atophan. White or yellowish white, crystalline, bitter powder. Insoluble in water; slightly soluble in alcohol, readily in alkali solutions. Uric-acid Eliminant. Average Dose: 8 grains (0.5 Gm.), with copious draught of water, liberal doses of sodium bicarbonate being taken simultaneously.

Acid Phosphoric, Squibb g. s. bottle, lb. ; ¼ lb.

Acidum Phosphoricum; Ortho-phosphoric Acid. Contains 85 to 88 percent. H_3PO_4 . Best syrupy acid. Sp. gr. about 1.72. Miscible with all proportions of water or alcohol. Antidotes: alkalies and their carbonates and bicarbonates. (See also Reagents [Part IV].)

ACID PHOSPHORIC DILUTED.

Acidum Phosphoricum Dilutum. Contains 9.5 to 10.5 percent. H_3PO_4 . Digestive, Refrigerant. Average Dose: 30 minims (2 mls [Cc.]), diluted. Incompatible with ferric chloride, lead acetate, solutions soluble iron phosphate and pyrophosphate, and silver nitrate.

Acid Phosphoric Glacial, Squibb

(Sticks) bottle, lb. ; ¼ lb. ; oz.

Acid Metaphosphoric. HPO_3 . Transparent, highly deliquescent solid. Soluble in water, alcohol. Urine-albumin test; also used pharmaceutically and technically.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

Acid Phosphotungstic Reagent. See Reagents (Part IV).

ACID PICRIC. See Trinitrophenol.

Acid Prussic Diluted. See Acid Hydrocyanic Diluted.

Acid Pyrogallic. See Pyrogallol.

⊕ **Acid Salicylic, Squibb**

* Crystals	carton, lb.	; ¼ lb.	; oz.
Powdered	carton, lb.	; ¼ lb.	; oz.

Acidum Salicylicum; Orthohydroxybenzoic Acid. $C_7H_6O_3$. Recrystallized. A high-grade medicinal acid. 1 Gm. dissolves in 460 mls (Cc.) water, 2.7 alcohol, 42 chloroform, 3 ether. Aqueous solubility increased by borax, potassium citrate, sodium phosphate or sulphite. Antirheumatic; Antiseptic, Germicide, Keratolytic; also Reagent. **Average Dose:** 12 grains (0.75 Gm.). Incompatible with iron salts, spirit nitrous ether, lead acetate, potassium iodide, and quinine salts, in solution.

Acid Salicylic Natural, Squibb

carton, lb. ; ¼ lb. oz.

The true, natural acid; from oil betula. Colorless crystals, with characteristic odor. Preferred by many physicians to the synthetic acid, but, acc. to Council on P. & C. of A. M. A., not superior to latter. **Dose:** same as preceding.

Acid Stearic, Squibb

tin, lb.

Acidum Stearicum. $C_{18}H_{36}O_2$. From tallow and other fats. Especially adapted for the manufacture of stearates. Hard, white, nearly odorless, tasteless solid. 1 Gm. dissolves in 21 mls (Cc.) alcohol, 2 chloroform, 3 ether; almost insoluble in water. Uses technical and pharmaceutical; also Reagent.

Acid Sulphuric, Squibb

g. s. bottle, 9 lbs. lb. ; lb. ; ¼ lb.

Acidum Sulphuricum; Concentrated, so-called "C. P." Sulphuric Acid; Oil Vitriol. Contains 93 to 95 percent. H_2SO_4 . Sp. gr. about 1.83. Caustic, oily liquid miscible with water and alcohol with evolution of much heat. **Antidotes:** chalk, magnesia or albumin. (See also Reagents [Part IV].)

Acid Sulphuric Aromatic, Squibb

g. s. bottle, lb. ; ¼ lb.

Acidum Sulphuricum Aromaticum; Elixir of Vitriol. Contains 19 to 21 per cent. H_2SO_4 , with tincture ginger, oil cinnamon and alcohol. Intestinal Astringent, Stomachic; good solvent for quinine sulphate. **Average Dose:** 15 minims (1 mil [Cc.]), well diluted.

ACID SULPHURIC Diluted.

Acidum Sulphuricum Dilutum. Contains 9.5 to 10.5 percent. H_2SO_4 . Sp. gr. about 1.067. **Average Dose:** 15 minims (1 mil [Cc.]).

Acid Sulphurous, Squibb g. s. bottle, lb. ; ¼ lb.

Acidum Sulphurosium, U. S. P. VIIIth Rev.; dropped from the present pharmacopœia. Contains about 6.5 percent. SO_2 . Exceptionally free from sulphuric acid. Colorless liquid; odor of burning sulphur, and sulphurous taste. Antiseptic and Antizymotic. **Average Dose:** 30 minims (2 mils [Cc.]), well diluted. (See also Reagents [Part IV].)

⊕ Acid Tannic, Squibb carton, lb. ; ¼ lb. ; oz.

Acidum Tannicum; Gallotannic Acid; Tannin. $\text{HC}_{14}\text{H}_9\text{O}_9$. A specially repurified, *medicinal* product; not the regular market grade. Bulky and light colored. 1 Gm. dissolves in 1 mil (Cc.) glycerin; very soluble in water, alcohol; almost insoluble in ether, chloroform. Prone to darken on exposure. Astringent, Styptic; Antidote for certain alkaloidal and metallic salts. Used locally in hemorrhages, pure; in 1 to 10 percent. solutions as mouth wash, injections, lotions, collodion, etc.; internally, in diarrhea, night-sweats, diabetes, etc. **Average Dose:** 8 grains (0.5 Gm.). Incompatible with salts of antimony, copper, iron, lead, mercury and silver; with alkaloids, albumin, gelatin, iodine, iodoform; with permanganates, chlorates and other oxidizers. (See also Glycerite; Troches [Part II]; Reagents [Part IV].)

Acid Tartaric, Squibb

(Powdered) carton, lb. ; ¼ lb.

Acidum Tartaricum; Dioxysuccinic Acid. Contains not less than 99.5 percent. $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$. White powder. 1 Gm. dissolves in 0.75 mil (Cc.) water, 3.3 mils alcohol, 4 glycerin; slightly soluble in ether; almost insoluble in chloroform. Refrigerant and Antiscorbutic. **Average Dose:** 8 grains (0.5 Gm.). Incompatible with salts of calcium, lead, and mercury. (See also Reagents [Part IV].)

Acid Trichloracetic, Squibb g. s. bottle, oz.

Acidum Trichloraceticum. $\text{HC}_2\text{Cl}_3\text{O}_2$. Colorless, deliquescent crystals; pungent, suffocating odor. 1 Gm. dissolves in 0.1 mil (Cc.) water; very soluble in alcohol or ether. Caustic, Styptic, Astringent; in nasopharyngeal diseases, warts, etc. Applied pure or in concentrated solution, as caustic; in 1 to 3 percent. solution, as astringent. Used also as test for albumin.

ACIDOL.

Betaine Hydrochloride. Colorless crystals; 23.8 percent. HCl. Soluble freely in water. Substitute for diluted hydrochloric acid as Digestive. **Dose:** 8 grains (0.5 Gm.), in water.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

⊕ **Aconite Root, Squibb****Ground for Percolation**

tin, lb.

Aconitum; Monkshood; Wolfsbane. Best quality, dried root of *Aconitum napellus* (Fam. *Ranunculaceæ*). U. S. P. requires not less than 0.5 percent. ether-soluble alkaloids. Physiologically assayed according to U. S. P. IXth Rev. and found to yield official preparations of not less than standard strength. Circulatory Sedative, Sudorific, Antineuralgic. **Average Dose:** $\frac{1}{2}$ grain (0.03 Gm.). **Antidotes:** emetics; atropine, digitalis or ammonia; small frequent doses of stimulants; artificial respiration. (See also Extract; Fluidextract; Liniment; Tincture.)

Aconitine Crystals, Squibb $\frac{1}{8}$ -oz. ; 15-gr. vial

Aconitina. $C_{34}H_{47}O_{11}N$. Crystalline alkaloid from aconite root. Colorless or white, odorless crystals. 1 Gm. dissolves in 28 mls (Cc.) alcohol, about 65 ether; very slightly soluble in water. Antineuralgic, Sudorific, Circulatory Sedative. **Average Dose:** $\frac{1}{400}$ grain (0.00015 Gm.), in pills or tablets. Used externally in 1:2000 to 500 ointments, or 2 percent. oleate, in neuralgias. **Antidotes:** stimulants, atropine, digitalis or ammonia. Dangerous to use on abraded surfaces. (See also Tablets [Part II].)

ADALIN.

Bromdiethylacetylcarbamide. Nearly colorless, odorless powder. Readily soluble in alcohol, ether, chloroform; sparingly in water. Nerve Sedative, mild Hypnotic. **Dose:** 5 to 15 grains (0.3 to 1 Gm.).

Adeps Lanæ. See Wool-Fat.**ADONIS.**

Adonis, N. F.; Pheasant's Eye. Dried, overground portion of *Adonis vernalis* (Fam. *Ranunculaceæ*). Cardiac Tonic of digitalis group, but acc. to Council on P. & C. of A. M. A. of unreliable activity. **Average Dose:** 2 grains (0.13 Gm.).

ADRENALIN. See under Epinephrine.**AGAR.**

Agar; Agar-Agar. Dried mucilaginous substance from marine algæ growing along eastern coast of Asia. Odorless, tasteless shreds, or granular powder. Insoluble in cold water; slowly soluble in hot water, forming jelly when cool. Culture medium; mechanical Laxative. Used in chronic constipation; passes through intestines almost unchanged. **Average Dose:** 150 grains (10 Gm.).

AGARIC.

Agaricus, N. F.; White Agaric; Larch Agaric. Dried fruit body of fungus *Polyporus officinalis* (Fam. *Polyporaceæ*). deprived of its outer rind. Used as Antihydrotic. **Average Dose:** 10 grains (0.65 Gm.).

AGURIN.

Theobromine-Sodium Acetate. White, hygroscopic, alkaline powder. 60 percent. theobromine. Soluble freely in water; decomposed by acids and carbon dioxide. Diuretic. **Dose:** 8 to 15 grains (0.5 to 1 Gm.).

AIKEN'S TONIC PILLS. See Pills Iron, Quinine, Strychnine and Arsenic, Mild.

AIROL.

Airoform; Bismuth Oxyiodogallate. $C_6H_2(OH)_3CO_2-Bi(OH)I$. Grayish-green, fine, odorless, insoluble powder; 20 percent. iodine. Vulnerary, Antigonorrheic. Incompatible with water and calomel.

ALBARGIN.

Compound of silver nitrate with gelatose. Coarse, yellow powder, readily soluble in water; contains about 15 percent. silver. Astringent and Bactericide, like silver nitrate.

⊕ ALCOHOL.

Alcohol. 92.3 percent. by weight or 94.9 percent. by volume of $C_2H_5.OH$. Sp. gr. not above 0.816 at $15.56^\circ C$. Stimulant internally; Refrigerant, Rubefacient, Astringent and Antiseptic topically. **Dose:** 1 to 4 fluidrachms (4 to 16 mls [Cc.]). Incompatible with acacia, albumin, bromine, chromic acid, permanganates.

Alcohol Dehydrated (Absolute), Squibb

bottle, gal. ($6\frac{5}{8}$ lbs.), per lb. ; lb. ; $\frac{1}{4}$ lb.

Alcohol Dehydratum; Anhydrous Alcohol. $C_2H_5.OH$. The U. S. P. permits 1 percent. water; our product contains only 0.2 percent. and thus runs about 99.8 percent. strength, sp. gr. 0.7945 at $15.56^\circ C$., contains no empyreumatic impurities, and complies with all official tests. However, when it is kept for any length of time in cork-stoppered bottles, it is apt to show slight traces of discoloration when the sulphuric acid test is applied, which, however, if within the limits of merely browning the acid, may be regarded as not seriously objectionable. (See also Reagents [Part IV].)

ALCOHOL DILUTED.

Alcohol Dilutum. 41 to 42 percent. by weight or 48.4 to 49.5 volume percent. $C_2H_5.OH$.

Alcohol Methyl, Reagent. See Reagents (Part IV).

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

ALETNIS.

Aletris, N. F.; Unicorn Root; Star Grass. Dried rhizome and root of *Aletris farinosa* (Fam. *Liliaceæ*). Simple Bitter, without advantage over gentian. Largely used in "female remedies," but, acc. to Council on P. & C., without good evidence of value. **Average Dose:** 30 grains (2 Gm.). (See also Fluidextract.)

Allspice, Squibb	* Whole	tin, lb.
	Powdered	tin, lb.
	sprinkler-top tins, 4 oz., per doz. 2 ozs., per doz. ; 1 oz., per doz.	

Pimenta, N. F.; Pimento. Dried, nearly ripe fruit of *Pimenta officinalis* (Fam. *Myrtaceæ*). Derived mostly from Jamaica. Collected just before the berries become ripe and carefully dried in the sun. Its odor resembles a mixture of cinnamon, nutmeg and cloves. Allspice should contain from 3 to 4 percent. of oil, upon which its virtue chiefly rests. Condiment, Aromatic, Stomachic. **Average Dose:** 15 grains (1 Gm.).

ALLIUM. See Garlic.

Allyl Sulphocarbamide. See Thiosinamine.

ALMOND, SWEET.

Amygdala Dulcis. Dried ripe seeds of *Prunus amygdalus dulcis* (Fam. *Rosaceæ*). Demulcent, Nutrient; also used pharmaceutically.

⊕ ALOES.

Aloe. Inspissated juice of leaves of *Aloe Perryi*, *A. vera* or *A. ferox*, respectively Socotrine, Curaçao or Cape Aloes. Moderately active Cathartic, acting mostly on the large intestine. **Average Dose:** 4 grains (0.25 Gm.).

Aloes Purified, Squibb

Ground for Percolation	tin, lb.
*Powdered	tin, lb. ; ¼ lb.

Aloes Purificata, U. S. P. VIIIth Rev. Dropped from new pharmacopœia. From best quality Curaçao aloes. Dull-brown or reddish-brown powder, almost completely soluble in alcohol also soluble in alkalis. Cathartic; acts mostly on large intestine. **Average Dose:** 4 grains (0.25 Gm.).

⊕ Aloin, Squibb bottle, lb. ; ¼ lb. ; oz.

Aloinum. Pentoside or mixture of pentosides from aloes. Yellow to yellowish-brown, very bitter powder; faint odor. Soluble in water, alcohol, acetone, ammonia water and alkali solutions; slightly soluble in ether. Acts like aloes. **Average Dose:** ¼ grain (0.015 Gm.).

ALTHÆA LEAVES.

Althæa Folia, N. F.; Marsh Mallow Leaves. Dried leaves of *Althæa officinalis* (Fam. *Malvaceæ*). Emollient, Demulcent; mostly used as cataplasm.

Althæa Root Powdered, Squibb tin, lb.

Althæa; Marsh Mallow Root. Dried root of *Althæa officinalis* (Fam. *Malvaceæ*), deprived of brown, corky layer and small roots. Very rich in mucilaginous principle. Preserve in tightly-closed containers, adding a few drops chloroform from time to time to prevent insects. Emollient, Demulcent.

⊕ **Alum, Squibb** * **Granulated** carton, lb.
Powdered carton, lb. ; ¼ lb.

Alumen; Ammonium Alum; Aluminum and Ammonium Sulphate. $\text{AlNH}_4(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$. Soluble in water; freely soluble in glycerin; insoluble in alcohol. Astringent, Styptic, Emetic; in night-sweats, diarrhea, hemorrhage, epistaxis, wounds, etc. **Average Dose:** 8 grains (0.5 Gm.); as emetic, a teaspoonful is usually given. Incompatible with borax, carbonates, galls, kino, lead acetate, magnesia, mercury salts, phosphates and tartaric acid. **NOTE:** The present U. S. P. recognizes both *ammonium* alum and *potassium* alum; the latter is not obtainable at this time.

⊕ **Alum Exsiccated, Squibb** tin, lb. ; ¼ lb.

Alumen Exsiccatum. Preceding article rendered anhydrous by drying. White, hygroscopic powder; astringent taste. Escharotic, Astringent, Vulnerary. Keep well stoppered, in dry place. (See also Powder Alum Compound.)

Alum Powder Compound. See Powder Alum Compound.

Alum, Chrome, Squibb carton, lb. ; ¼ lb.

Chromium and Potassium Sulphate. $\text{CrK}(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$. Dark-violet, large crystals. Soluble in about 5 parts water. Basis for manufacture of pigments (for dyeing, calico-printing, etc.).

⊖ **Aluminum Acetate, Squibb** bottle, lb. ; ¼ lb.

Basic Aluminum Acetate. Fine, white powder; slight astringent, acidulous taste. Well-nigh insoluble in water or alcohol. External and Intestinal Astringent. **Dose:** 5 to 10 grains (0.3 to 0.65 Gm.). (See also Solution Aluminum Acetate.)

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

ALUMINUM CHLORIDE.

Alumini Chloridum, N. F. $\text{AlCl}_3 \cdot 6\text{H}_2\text{O}$. White or yellowish-white, nearly odorless powder; sweetish, astringent taste. 1 Gm. dissolves in about 0.5 mil (Cc.) water, 4 alcohol; soluble in glycerin. Antiseptic, Astringent; without advantage over alum. Average Dose: 5 grains (0.3 Gm.).

ALUMINUM HYDROXIDE.

Alumini Hydroxidum; Precipitated Aluminum Oxide. $\text{Al}(\text{OH})_3$. White, bulky, odorless, tasteless, amorphous powder. Insoluble in water, alcohol, etc. Astringent, Desiccant Dermic.

Aluminum Nitrate Reagent. See Reagents (Part IV).

Aluminum Sulphate, Squibb

***Granulated or Powdered** carton, lb.

Alumini Sulphas, N. F. $\text{Al}_2(\text{SO}_4)_3 \cdot 16\text{H}_2\text{O}$. White granules or powder; sweetish, astringent taste. 1 Gm. dissolves (not clearly) in about 1 mil (Cc.) water; insoluble in alcohol. Antiseptic, Astringent; on ulcers, enlarged tonsils in endometritis, etc.; usually applied in 1 to 5 percent. solutions, occasionally in concentrated solution. Also Reagent.

Aluminum-Ammonium Sulphate. See Alum.

Aluminum-Potassium Sulphate Reagent. See Reagents (Part IV).

ALUMNOL.

Aluminum Betanaphtholsulphonate. $\text{Al}(\text{C}_{10}\text{H}_6[\text{OH}]\text{SO}_3)_3$. White, hygroscopic, bitter powder. Soluble in about 1.5 parts water; easily in glycerin, sparingly in alcohol. Astringent, Antiseptic; in 0.5 to 3 percent. solutions.

ALYPIN.

White, hygroscopic, bitter powder. Soluble very freely in water, easily in alcohol. Local Anesthetic; in 10 percent. solution topically, 1 to 4 percent. hypodermically.

AMINOFORM. Brand of Hexamethylenamine.

⊕ Ammonia Water (10% = 16° Be.), Squibb

g. s. bottle, lb.,

Aqua Ammoniae; Liquor Ammoniae; Spirit of Hartshorn. 10 percent. NH_3 . Sp. gr. about 0.958. Local Irritant and Antacid, in liniments; fugacious indirect Circulatory and Respiratory Stimulant, internally or hypodermically; antidote in chlorine poisoning, by inhalation; also Reagent. Average Dose: 15 minims (1 mil [Cc.]). Incompatible with chlorine water, iodine, alkaloidal salts, acids, etc. Liable to deteriorate on keeping.

Ammonia Water Stronger (28% = 26° Be.), Squibb

g. s. bottle, lb.,

Aqua Ammoniae Fortior; Concentrated or Stronger Ammonia. 28 percent. NH_3 . Uses chiefly pharmaceutical, chemical and technical. **Antidotes**: vinegar; vapor of acetic acid or chlorine water by inhalation. **NOTE**: Should be handled with extreme caution, lest an accident occur. In warm weather the bottles should preferably be placed on ice for a while, before withdrawing stopper. (See also Spirit; Reagents [Part IV]).

Ammonio-Formaldehyde. See Hexamethylenamine.

Ammonium Benzoate, Squibb

bottle, lb. ; 1/4 lb. ; oz.

Ammonii Benzoas. From Synthetic Benzoic Acid. $\text{NH}_4\text{C}_7\text{H}_5\text{O}_2$. White laminae or powder; saline, bitter, acrid taste. 1 Gm. dissolves in 10 mls (Cc.) water, 35.5 alcohol, 8 glycerin. Mild Antiseptic and Diuretic, like sodium benzoate but more irritant; also Reagent. **Average Dose**: 15 grains (1 Gm.). Incompatible with ferric salts.

Ammonium Benzoate from Natural (True) Acid, Squibb

bottle, lb. ; 1/4 lb. ; oz.

Ammonium Bromide, Squibb

bottle, lb. ; 1/4 lb.

Ammonii Bromidum. NH_4Br . White, odorless granules, of pungent, saline taste. 1 Gm. dissolves in 1.3 mls (Cc.) water, 12 alcohol. Nerve Sedative. **Average Dose**: 15 grains (1 Gm.). Incompatible with alkaloidal, mercuric and silver salts.

⊕ Ammonium Carbonate, Squibb

(Cubes)

bottle, lb. ; 1/4 lb.

Ammonii Carbonas; Hartshorn; Volatile Salt; Volatile Alkali. Mixture of acid ammonium carbonate, NH_4HCO_3 , and ammonium carbamate, $\text{NH}_4\text{NH}_2\text{CO}_2$. The widely known Squibb article which has deservedly won high reputation for its exceptional quality, high strength and reliability. Colorless, translucent, and has but a slight coating of bicarbonate on the surface. It is of full U. S. P. strength, assaying at time of bottling about 32 percent. ammonia gas. Intended especially for medicinal use, and peculiarly adapted to prescription work and for making aromatic spirit of ammonia or solution of ammonium acetate. 1 Gm. dissolves slowly in 4 mls (Cc.) water, 4 glycerin; partly soluble in alcohol; decomposed by hot water. Cardiac Stimulant and Expectorant. **Average Dose**: 5 grains (0.3 Gm.). Incompatible with salts of alkaloids, acids and acid salts or syrups, calomel and tartar emetic. Keep well stoppered, in a cool place; on exposure it loses ammonia. A piece of cotton placed into a slit in bottom of cork and kept moist with stronger ammonia water will retard change. (See also Reagents [Part IV].)

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality; the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

⊕ **Ammonium Chloride, Squibb**

(Granulated)

carton, lb. ; ¼ lb.

Ammonii Chloridum; Ammonium Muriate; Pure Sal Ammoniac. NH_4Cl . High quality; prepared from refined sal ammoniac by recrystallizing; above U. S. P. requirement of 99.5 per cent. purity. 1 Gm. dissolves in 2.6 mils (Cc.) water, 100 alcohol, 8 glycerin. Liquefying Expectorant, Alterative; in bronchial affections, glandular enlargements, dysmenorrhea, etc. **Average Dose:** 5 grains (0.3 Gm.). Incompatible with alkaline hydroxides and carbonates, soluble lead and silver salts. (See also Reagents [Part IV]; Tablets, Troches, [Part II].)

Ammonium Chromate Reagent. See Reagents (Part IV).

Ammonium Citrate, Squibb

bottle, lb. ; ¼ lb. ; oz.

$(\text{NH}_4)_3\text{C}_6\text{H}_5\text{O}_7$. Granular, deliquescent; very soluble in water. Diaphoretic, Refrigerant; also Reagent. **Dose:** 15 grains (1 Gm.). Keep well-stoppered.

Ammonium Hypophosphite, Squibb

bottle, lb. ; ¼ lb. ; oz.

Ammonii Hypophosphis, N. F. $\text{NH}_4\text{PH}_2\text{O}_2$. White, odorless, scaly crystals. 1 Gm. dissolves in 1 mil (Cc.) water, 20 mils alcohol. Used as Alterative and Anticatarrhal. **Average Dose:** 5 grains (0.3 Gm.). Keep from light and air; darkens

Ammonium Iodide, Squibb

bottle, lb. ; ¼ lb. ; oz.

Ammonii Iodidum. NH_4I . White or nearly white, granular, hygroscopic powder; saline taste. 1 Gm. dissolves in 0.6 mil (Cc.) water, 3.7 mils alcohol, 1.5 glycerin. Saline Expectorant, Alterative; more irritant than other iodides. **Average Dose:** 5 grains (0.3 Gm.). Keep from light and air; darkens on exposure. A deeply colored salt should not be dispensed.

Ammonium Molybdate. See Reagents (Part IV).

Ammonium Muriate. See Ammonium Chloride.

Ammonium Nitrate Reagent. See Reagents (Part IV).

Ammonium Oxalate Reagent. See Reagents (Part IV).

Ammonium Persulphate Reagent. See Reagents (Part IV).

Ammonium Phosphate, Squibb bottle, lb. ; ¼ lb.

Ammonii Phosphas, N. F.; Diammonium Ortho-phosphate. $(\text{NH}_4)_2\text{HPO}_4$. Colorless, odorless crystals; saline taste. 1 Gm. dissolves in about 4 mils (Cc.) water; insoluble in alcohol. Similar in action to sodium phosphate, but used mainly as Antirheumatic and Alterative. **Average Dose:** 5 grains (0.3 Gm.). (See also Reagents [Part IV].)

Ammonium Salicylate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Ammonii Salicylas. $\text{NH}_4\text{C}_7\text{H}_5\text{O}_3$. White, odorless, crystalline powder; faintly saline, bitter taste. 1 Gm. dissolves in 1 mil (Cc.) water, 3 mils alcohol. Antirheumatic, Analgesic, Expectorant. Average Dose: 8 grains (0.5 Gm.).

Ammonium Sulphate Reagent. See Reagents (Part IV).

Ammonium Sulphocyanate Reagent. See Reagents (Part IV).

AMMONIUM SULPHOICHTHYOLATE. See Ichthyol.

Ammonium Valerate, Squibb g.s. bottle, ¼ lb. ; oz.

Ammonii Valeras; Ammonium Valerianate. $\text{NH}_4\text{C}_5\text{H}_9\text{O}_2$. White plates; valerian odor; sharp, sweetish taste. 1 Gm. dissolves in 0.3 mil (Cc.) water, 0.6 alcohol; soluble in ether. Nerve Sedative in hysteria. Average Dose: 8 grains (0.5 Gm.).

SQUIBB'S AMPULS**of Sterile Solutions for Hypodermic or Intramuscular Injection**

In response to a request from many physicians we have added to our list a number of sterile solutions for hypodermic or intramuscular injection, and will add others as the demand arises. They are put up in hermetically sealed tubules or *ampuls*. For use, sterilize the syringe and the needle, break off the stem of the ampul at the file mark on the neck, turn the ampul upside down, introduce the needle, withdraw the contents and inject.

Caffeine Sodio-Salicylate

Contains about 50 percent. caffeine, and is soluble in 2 parts water, hence serviceable for hypodermic use (chiefly in acute articular rheumatism complicated with heart disease, and in threatened collapse in pneumonia). 0.1 Gm. (1½ gr.) in 1 Cc. (mil) ampuls, box of 1 dozen.

Camphor

Is employed subcutaneously as a stimulant in sudden depression and collapse as seen in infectious diseases and other exhausting affections and after operations. The ordinary dose is 8 grains per injection; however, in pneumonia larger doses are used—up to 30 grains per day, smaller quantities having proved of no avail here. Supplies as solutions in expressed oil almond:

0.1 Gm. (1½ grs.) in 1 Cc. ampuls, box of 1 dozen,

0.2 Gm. (3 grs.) in 1 Cc. ampuls, box of 1 dozen.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

Squibb's Ampuls (Cont.)**Ergot (Sterile).**

An aqueous solution containing the active constituents of ergot, free from inert extractive. Physiologically tested and standardized; 1 mil (Cc. or 16 min.) equals 2 Gm. best Spanish ergot. Box of 6 x 1 Cc. ampuls,
Box of 12 x 1 Cc. ampuls,

IRON ARSENITE.

And combinations. Discontinued in deference to the ruling of the Council on Pharmacy and Chemistry of A. M. A.

IRON CITRATE GREEN. Discontinued; see under this title.**Iron Cacodylate**

Is an arsenical compound of iron employed as an alterative and hematinic in chlorosis, leukemia, lymphadenitis, etc. The hypodermic dose is 0.03 to 0.1 Gm. ($\frac{1}{2}$ to $1\frac{1}{2}$ grains) daily. 0.03 Gm. ($\frac{1}{2}$ gr.) in 1 Cc. ampuls, box of a dozen,

Mercury Iodide Red

Is a mercurial commonly employed hypodermically in syphilis. It is supplied in 1 percent. oily solution, in 1 Cc. ampuls, each thus containing 0.01 Gm. ($\frac{1}{6}$ gr.) of the medicament. Per box of 1 dozen ampuls,

Mercury Salicylate

Is offered in sterile suspension in emulsion of wool-fat and almond oil. It is a favorite with many physicians in the subcutaneous treatment of syphilis. 0.065 Gm. (1 gr.) in 1 Cc. ampuls, box of 1 dozen,

Quinine Dihydrochloride

Contains about 75 percent. of quinine alkaloid, and is the most readily soluble simple salt of quinine. Hence it is well adapted for intramuscular injection as an antiperiodic in obstinate cases of malarial fever. Sizes:

0.25 Gm. ($3\frac{3}{4}$ grs.) in 2 Cc. ampuls, box of 1 dozen,
0.5 Gm. ($7\frac{1}{2}$ grs.) in 2 Cc. ampuls, box of 1 dozen,
1 Gm. ($15\frac{1}{2}$ grs.) in 2 Cc. ampuls, box of 1 dozen,
box of six,

Quinine and Urea Hydrochloride

Also known as Carbamidated Quinine Dihydrochloride, contains about 70 percent. of alkaloidal quinine and is soluble in an equal part of water. Its 1 percent. solution is employed by injection as a local anesthetic, slower but more prolonged in action than cocaine, and non-toxic; in 10 to 20 percent. solution it is applied topically to mucous membranes and wound surfaces. As an antiperiodic it is injected deep into the gluteal or deltoid muscles. Offered in sterile aqueous solutions as follows:

0.25 Gm. ($3\frac{3}{4}$ grs.) in 2 Cc. ampuls, box of 1 dozen,
0.5 Gm. ($7\frac{1}{2}$ grs.) in 2 Cc. ampuls, box of 1 dozen,
1 Gm. ($15\frac{1}{2}$ grs.) in 2 Cc. ampuls, box of 1 dozen,
1% solution, for local anesthesia, in 1 Cc. ampuls, box of 1 doz.,
1% solution, for local anesthesia, in 5 Cc. ampuls, box of six.

Squibb's Ampuls (Cont.)

Silver Nitrate 1% Solution

box of 1 dozen,

For preventing ophthalmia neonatorum, 1 or 2 drops being instilled into each eye.

Sodium Cacodylate

Though it contains 35 percent. of metallic arsenic (equivalent to 47 percent. of arsenic trioxide [so-called arsenous acid]), is regarded as a relatively non-toxic succedaneum for the ordinary arsenical preparations in skin diseases; chlorosis, malarial cachexia, etc., and it has lately come to the fore in the treatment of syphilis, by intramuscular injection. For the latter purpose the ordinary dose is 0.45 Gm. (7 grs.) for men, 0.4 Gm. (6 grs.) for women, and 0.05 Gm. ($\frac{3}{4}$ gr.) for infants.

0.05 Gm. ($\frac{3}{4}$ gr.) in 1 Cc. ampuls, box of 1 dozen,

0.13 Gm. (2 grs.) in 1 Cc. ampuls, box of 1 dozen,

0.2 Gm. (3 grs.) in 1 Cc. ampuls, box of 1 dozen,

0.45 Gm. (7 grs.) in 1 Cc. ampuls, box of 1 dozen,

Amyl Acetate, Squibb

bottle, lb.

$C_5H_{11}.C_2H_3O_2$. Colorless liquid; agreeable, pear-like odor.

Slightly soluble in water; miscible with alcohol, ether. Solvent of resins; constituent of fruit essences and perfumes; Reagent.

⊕ Amyl Nitrite, Squibb

ampul, oz. ; $\frac{1}{4}$ oz.

covered tubules, 3 minims, box of 10,

covered tubules, 5 minims, box of 10,

Amylis Nitris. $C_5H_{11}NO_2$. Clear, yellowish liquid; ethereal, fruity odor; pungent aromatic taste. Contains when fresh 80 percent. $C_5H_{11}NO_2$. Is free from water and aldehyde, and contains much less than permissible limit of free acid. On keeping, it loses in strength and becomes more acid. Miscible with alcohol, ether; almost insoluble in water. Offered in tubules covered with tubular braid, which acts as absorbent and inhaler. For use, a tubule is broken between the thumbs and fingers and the vapor inhaled from the braid covering. Prompt Vaso-dilator; chiefly in spasms of angina pectoris, asthma, general convulsions, fainting, etc. Average Dose: 3 minims (0.2 mil [Cc.]), by inhalation. Antidotes: atropine; ergot or strychnine hypodermically. Keep in a cool place, and disturb as little as possible. Inflammable!

Amylopsin. See Diastase from Pancreas.

ANGELICA FRUIT.

Angelica Fructus, N. F.; Angelica Seed. Ripe fruit of *Angelica Archangelica* and other species of *Angelica* (Fam. *Umbelliferae*). Aromatic Stomachic, Carminative. Average Dose: 15 grains (1 Gm.).

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

ANGELICA ROOT.

Angelica Radix, N. F. Rhizome and roots of *Angelica atropurpurea* (Fam. *Umbelliferae*) and other species. Stimulating Expectorant. Average Dose: 30 grains (2 Gm.).

Anise, Squibb Whole tin, 5 lbs., per lb. ; lb.

Anisum; Aniseed. Dried ripe fruit of *Pimpinella Anisum* (Fam. *Umbelliferae*), obtained from cultivated plants only, of fine aromatic odor and taste. Aromatic Carminative. Average Dose: 8 grains (0.5 Gm.).

Anodyne, Hoffmann's. See Spirit Ether Compound.

Antidote, Arsenic, Squibb per set,

Iron Hydroxide (Ferric) with Magnesium Oxide. In two bottles, one containing diluted solution of tersulphate of iron, the other a mixture of magnesia and water; all in such proportions that when combined there is produced official *Ferri Hydroxidum cum Magnesii Oxido*. Valuable for emergency use.

Antifebrin. See Acetanilid.

Antilithic, Granular Effervescent. See Sodium Phosphate Compound, Granular Effervescent.

ANTIMONY OXIDE.

Antimonii Oxidum, N. F. Sb_2O_3 . White or grayish-white, odorless, tasteless powder. Insoluble in ordinary solvents. Expectorant, Emetic. Average Dose: 1 grain (0.06 Gm.).

ANTIMONY SULPHURATED.

Antimonium Sulphuratum, N. F.; Kermes Mineral; Red Antimony Sulphide. Chiefly Sb_2S_3 , with small quantities antimony trioxide, sodium pyroantimonate and sulphur. Reddish-brown, odorless, tasteless powder. Insoluble in usual solvents. Obsolete Cathartic, Alterative, Emetic. Ordinary Dose: 2 grains (0.13 Gm.); emetic, 10 grains (0.65 Gm.).

⊕ Antimony and Potassium Tartrate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Antimonii et Potassii Tartras; Tartar Emetic; Tartrated Antimony. $2K(SbO)C_4H_4O_6 \cdot H_2O$. White, odorless, granular powder; sweet, afterwards disagreeable metallic taste. 1 Gm. dissolves in 12 mls (Cc.) water, 15 glycerin. Nauseant Expectorant, Emetic; Pustulant externally. Average Dose: expectorant, $\frac{1}{12}$ gr. (0.005 Gm.); emetic, $\frac{1}{2}$ gr. (0.03 Gm.). Best to begin with small doses ($\frac{1}{60}$ gr. [0.001 Gm.]), which may be repeated hourly. Incompatible with antipyrine, mercuric chloride, alkaline carbonates, tannic acid, and vegetable infusions containing tannin. (See also Wine; Reagents [Part IV].)

⊕ Antipyrine, Squibb

bottle, oz.

Antipyrina; Phenyl dimethylpyrazolone; Phenazone; Methozine. $C_{11}H_{12}N_2O$. White, almost odorless, slightly bitter, crystalline powder. 1 Gm. dissolves in about 1 mil (Cc.) water, 1.3 mils alcohol, 0.7 mil chloroform, 43 mils ether. Antipyretic and Analgesic, internally; Styptic and Antiseptic, externally. **Average Dose:** 5 grains (0.3 Gm.). Applied topically in 1:8 ointment, or pure, or in 20 percent. solution (in bleeding). Incompatible with alum, amyl nitrite, benzoates, ferric chloride, carbolic acid, calomel, iodides, resorcin, sodium bicarbonate, spirit nitrous ether (when not very recently made), tartar emetic and tannic acid, in solution; with chloral hydrate and betanaphthol on trituration; astringent infusions. **Antidotes:** stimulants; atropine or strychnine subcutaneously; oxygen.

ANTIPYRINE SALICYLATE. See Salipyrine.

APIOL, LIQUID. See Oleoresin Parsley Fruit.

APOCYNUM.

Apocynum, N. F.; Black'Indian or Canadian Hemp. Dried rhizome and roots of *Apocynum cannabinum* (Fam. *Apocynaceæ*). Cardiac Tonic, of digitalis group. **Average Dose:** 12 grains (0.75 Gm.)

†⊕ **APOMORPHINE HYDROCHLORIDE (CRYSTALS).**

Apomorphinae Hydrochloridum. $C_{17}H_{17}NO_2 \cdot HCl + \frac{1}{2}H_2O$. Alkaloidal derivative of morphine. Grayish-white, odorless prisms, turning green on exposure to light and air. 1 Gm. dissolves in 50 mils (Cc.) water, 50 alcohol; slightly soluble in chloroform, ether. Prompt, centrally acting Emetic for hypodermic use; nauseant Expectorant; Sedative (in delirium tremens). **Average Dose:** expectorant and sedative, $\frac{1}{20}$ gr. (0.003 Gm.); emetic, hypodermically $\frac{1}{12}$ gr. (0.005 Gm.), by mouth $\frac{1}{6}$ gr. (0.01 Gm.). Its solutions decompose rapidly. (See also Tablets [Part II].)

Apparatus Stand (Improved), Squibb

For filtering, holding burettes, supporting condensers, holding separatory funnels, and supporting crucibles and small beakers. This device has been in use in the Squibb Laboratories for some time and has proved very satisfactory. It consists of a nickel-plated, upright rod, about 22 inches in height and $\frac{1}{4}$ inch in diameter, secured in an iron cylinder base. Several attachments, adapted for various chemical manipulations, can be readily fitted to the rod. These special attachments consist of spring clamps which slide closely over the rod and lock automatically by binding on the same. A clamp is

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Apparatus Stand (Improved), Squibb (Cont.)

easily shifted up or down or swung sideways by a slight pressure. To move an attachment, take hold of the base of the stand with one hand and slide or pull the spring with the other, keeping the direction of the pull parallel to the rod. Do not attempt to remove an attachment while supporting an object, since its weight locks it to the rod; the greater the downward pressure the more firmly the attachment locks itself. It is advisable to apply a little petrolatum over the rod as lubricant and also to protect the parts from rusting. Should the attachments fail to slide easily, remove them and rub the rod lightly with emery powder; if the attachments slide too freely, the springs should be removed and tightened by means of pliers. The advantages of Squibb's Improved Apparatus-Stand over other such stands are in its stability, neat appearance and compactness. The stand is simple, portable and can be used for many simultaneous operations. Its uses are: (1) for filtering; (2) for holding burettes absolutely rigid, and perpendicular, permitting them to be easily moved up or down; (3) for supporting light condensers; (4) for holding separatory funnels and pipettes; (5) for supporting crucibles and small beakers. After use, the apparatus can be set aside and occupies no more space than an ordinary reagent bottle.

APPLE JUICE.

Succus Pomorum, N. F. Freshly expressed juice of sound, ripe, sour apples, the fruit of cultivated varieties of *Pyrus Malus* (Fam. *Rosaceæ*).

Aqua Ammoniæ. See Ammonia Water.

Aqua Fortis. See Acid Nitric.

Aqua Regia. See Acid Nitrohydrochloric.

ARALIA.

Aralia, N. F.; American Spikenard. Dried rhizome and root of *Aralia racemosa* (Fam. *Araliaceæ*). Alterative, Diaphoretic. Average Dose: 30 grains (2 Gm.).

ARBOR VITÆ. See Thuja.

ARGENTUM CREDÉ. See Collargol.

ARGONIN.

Silver-casein. Nearly white powder; 4.28 percent. silver. Soluble readily in water. Antigonorrheic, Astringent.

ARGYROL.

Silver-vitellin. Black, hygroscopic scales; 20 to 25 percent. silver. Soluble freely in water or glycerin; insoluble in alcohol or oils. Antigonorrheic, Astringent, Antipyric. Used in 10 to 25 percent. solutions.

ARISTOCHIN.

Aristoquin; Diquinine Carbonic Ester. White, odorless, tasteless powder; 96 percent. quinine. Soluble in chloroform; insoluble in water; difficultly soluble in alcohol, very sparingly in ether. Succedaneum for quinine sulphate. **Dose:** 2 to 15 grains (0.13 to 1 Gm.). Incompatible with acids or alkalies.

ARISTOL. Brand of Thymol Iodide.

Arnica Flowers, Squibb

Ground for Percolation

tin, lb.

Arnica. Dried flower-heads of *Arnica montana* (Fam. *Compositæ*), especially free from sophistication with flowers of other plants. Produce galenicals of correct quality, odor and taste. Feeble Rubefacient, used chiefly as tincture. (See Fluid-extract; Tincture.)

Arsenic Antidote. See Antidote, Arsenic.

Arsenic Iodide, Squibb

g. s. bottle, oz.

Arseni Iodidum. AsI_3 ; Arsenic Triiodide. Orange-red, odorless crystals or powder. 82.7 percent. iodine and 16.3 percent. arsenic. 1 Gm. dissolves in about 12 mls (Cc.) water, with partial decomposition; soluble in alcohol, chloroform, ether. Alterative, in cancer (internally and externally), scrofula, leprosy, etc. **Average Dose:** $\frac{1}{12}$ gr. (0.005 Gm.), in pills or tablets. Keep from light. (See also Tablets [Part II].)

⊕ Arsenic Trioxide, Squibb

(Acid Arsenous Powdered) bottle, $\frac{1}{4}$ lb. ; oz

Arseni Trioxidum; Arsenous Acid; As_2O_3 . Soluble in water, freely in glycerin, sparingly in alcohol or ether. Aqueous solubility is increased by tartaric or hydrochloric acid. Antiperiodic, Alterative, Caustic. **Average Dose:** $\frac{1}{30}$ grain (0.002 Gm.). **Antidotes:** arsenic antidote, emetics; milk or eggs; magnesia in milk. Incompatible with tannic acid and infusion cinchona and other vegetable astringent infusions, tinctures and decoctions; also with salts of iron and magnesium, lime-water, etc. (See also Reagents, Part IV; Tablets [Part II].)

ARSENPHENOLAMINE-S. See Neoarsphenamine.

ARSENOBENZOL. Brand of Arsphenamine (Salvarsan).

⊕ ARSPHENAMINE.

Name adopted by Federal Trade Commission for Diaminodihydroxy-arsenobenzene Hydrochloride (first introduced as Salvarsan and also known as Arsenobenzol and Ehrlich's 606) as made in America. Yellow powder, containing about 31.5 percent arsenic. Readily soluble in water. Alterative and Antiluetic; succedaneum for arsenic, but used mainly in syphilis by intravenous, intramuscular or hypodermic injection. **Dose** (in lues): men, 9 grains (0.6 Gm.); women, 6 grains (0.4 Gm.); children, 2 to 5 grains (0.13 to 0.3 Gm.).

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

⊕ **ASAFETIDA.**

Asafætida. Gum-resin obtained by incising rhizome and roots of *Ferula Asafætida*, *F. fætida*, and other species of *Ferula* (Fam. *Umbelliferae*). Soft mass; persistent, garlicky odor; bitter, acrid taste. Carminative, Sedative; in hysteria, asthma, etc. **Average Dose:** 4 grains (0.25 Gm.). (See also Tablets [Part II].)

ASARUM.

Asarum, N. F.; Canada Snake-root. Dried rhizome and roots of *Asarum canadense* (Fam. *Aristolochiaceae*). Carminative, Flavor; similar to ginger. **Average Dose:** 30 grains (2 Gm.).

Asbestos Wool Reagent. See Reagents (Part IV).

ASCLEPIAS.

Asclepias, N. F.; Pleurisy Root. Dried roots of *Asclepias tuberosa* (Fam. *Asclepiadaceae*). Slight odor; bitterish, disagreeable, acrid taste. Domestic remedy for pleurisy; also used as Diaphoretic. **Average Dose:** 30 grains (2 Gm.). (See also Fluidextract.)

ASPIDIUM.

Aspidium; Male Fern. Rhizome and stipes of *Dryopteris Filix-mas* or *D. marginalis* (Fam. *Polypodiaceae*). Anthelminthic. **Average Dose:** 1 drachm (4 Gm.).

ASPIDOSPERMA.

Aspidosperma; Quebracho. Dried bark of *Aspidosperma Quebracho blanco* (Fam. *Apocynaceae*). Respiratory Tonic. Antidyspneic; chiefly in asthma and emphysema. **Average Dose:** 1 drachm (4 Gm.). (See also Fluidextract.)

ASPIRIN. Brand name for Acetylsalicylic Acid.

ATOPHAN. See Acid Phenylcinchoninic.

⊕ **ATOXYL.**

Sodium Arsanilate. White, odorless powder; about 22 per cent. arsenic. Soluble in water. Alterative, Antiluetic. **Dose:** $\frac{1}{3}$ to 3 grains (0.02 to 0.2 Gm.), hypodermically every second day.

⊕ **Atropine, Squibb**

$\frac{1}{8}$ -oz. vial, ; 10-gr. vial,
5-gr. vial,

Atropina. $C_{17}H_{23}O_3N$. An alkaloid from *Atropa Bella-donna* and other plants of *Solanaceae*. White, odorless, bitter, acrid crystals. 1 Gm. dissolves in 455 mls (Cc.) water, 2 alcohol 27 glycerin, 1 chloroform, 25 ether. Respiratory and Cardiac Stimulant; Antispasmodic, Antihydrotic, Antisialagogue. **Average Dose:** $\frac{1}{120}$ gr. (0.0005 Gm.). Acts within $\frac{1}{2}$ hour, eliminated within 3 hours. Applied locally as oleate. Antidotes: tannin, then emetics; morphine, pilocarpine, physostigmine, aconitine.

⊕ **Atropine Sulphate, Squibb** $\frac{1}{8}$ -oz. vial, ; 10-gr. vial, ; 5-gr. vial,

Atropinæ Sulphas. ($C_{17}H_{23}O_3N$) $_2$.H $_2$ SO $_4$. White, crystalline, odorless, bitter powder. 1 Gm. dissolves in 0.4 mil (Cc.) water, 5 mils alcohol, 2.5 glycerin, 420 chloroform, 3200 ether. Uses same as alkaloid, but largely as Mydriatic, in $\frac{1}{2}$ percent. solution. **Average Dose:** $\frac{1}{120}$ grain (0.0005 Gm.).

BACILLUS BULGARICUS CULTURE.

Offered in liquid and tablet forms. Antizymotic internally, Antipyric topically. **Dose:** liquid, 7 mils (Cc.); tablets, 1 or 2, after meals.

Baking Powder, Squibbtin, lb. ; $\frac{1}{4}$ lb.

After a formula approved by the U. S. Government, but with slight modification to enhance its effectiveness. Free from all injurious substances, hence perfectly harmless to health. Owing to the fact that this powder is made from the purest materials and thoroughly dried before putting up, it should be used with moderation; it is more active than most powders—a level teaspoonful of Squibb's Baking Powder is equivalent to a heaping teaspoonful of the regular baking powders of the market. Keep the can well closed and in a dry place.

BALM GILEAD BUDS. See Balsam Poplar Buds.

BALSAM POPLAR BUDS.

Populi Gemmæ, N. F.; Balm of Gilead Buds. Air-dried, closed winter leaf-buds of *Populus nigra* or *P. balsamifera* (Fam. *Salicaceæ*). Anticatarrhal, Expectorant; similar to cubeb or turpentine.

BALSAM COPAIBA. See Copaiba.

Balsam, Friars' or Turlington's. See Tincture Benzoin Compound.

⊖ **Balsam Peru, Squibb**bottle, lb. ; $\frac{1}{4}$ lb.

Balsamum Peruvianum. From *Toluifera Pereiræ* (Fam. *Leguminosæ*). Soluble in alcohol and chloroform with not more than slight opalescence; partly in ether. Contains 50 to 56 percent. cinnamein. Thick, dark-brown liquid; vanilla-like odor; bitter, acrid taste. Sp. gr. 1.130 to 1.160. Antiseptic, Alterative, Expectorant. Used chiefly externally, on wounds, ulcers, chilblains, etc.; internally, in chronic catarrh, asthma, phthisis, etc. **Dose:** 10 to 20 grains (0.65 to 1.3 Gm.). Incompatible with iodoform in substance, and hydrogen dioxide.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

⊕ **Balsam Tolu, Squibb** tin, lb.

Balsamum Tolutanum. From *Toluiifera Balsamum* (Fam. *Leguminosæ*). Free from rosin and copaiba and in other respects fully U. S. P. Yellow-brown, plastic solid, becoming brittle when old or dried or exposed to cold; vanilla-like odor; mild aromatic taste. Soluble in alcohol, chloroform, ether. Expectorant; used chiefly as its syrup, a pleasant vehicle. **Dose:** 8 to 15 grains (0.5 to 1 Gm.). (See also Fluid; Syrup; Tincture.)

BAPTISIA.

Baptisia, N. F.; Wild Indigo. Dried roots of *Baptisia tinctoria* (Fam. *Leguminosæ*). Used as Astringent. **Average Dose:** 15 grains (1 Gm.).

BARBITAL-SODIUM (SODIUM DIETHYLBARBITURATE)

This is the name adopted by the Federal Trade Commission for the product known by various brand names, such as: Medinal, Veronal-Sodium, etc. White powder, of bitter-alkaline taste. Soluble in 5 parts water. Hypnotic; used also hypodermically and by rectum. **Dose:** 5 to 15 grains (0.3 to 1 Gm.).

BARBERRY. See *Berberis*.

⊕ **BARBITAL.**

Name adopted by Federal Trade Commission for Diethylmalonylurea or Diethylbarbituric Acid (first introduced under the trade name Veronal and also known as Malo-Urea) as made in America during the suspension of the German patents. White, crystalline, odorless, slightly bitter powder. Soluble in about 150 parts water, readily in ether, slightly in chloroform. Hypnotic. **Dose:** 5 to 15 grains (0.3 to 1 Gm.), with a hot drink.

Barium Acetate Reagent. See Reagents (Part IV).

Barium Carbonate Reagent. See Reagents (Part IV).

Barium Chloride Reagent. See Reagents (Part IV).

Barium Hydroxide Reagent. See Reagents (Part IV).

Barium Nitrate Reagent. See Reagents (Part IV).

Barium Sulphate for X-Ray Work, Squibb

carton, lb. ; ¼ lb.

BaSO_4 . White, odorless, tasteless, quite bulky powder. Insoluble in usual organic solvents. Barium Sulphate has come into use for X-Ray work on the stomach and intestines. Instances of poisoning that have occurred point out the necessity of employing only a perfectly pure grade free from soluble barium salts, which latter are the cause of toxic symptoms. The article here offered is perfectly free from these noxious soluble salts, and is especially prepared for X-Ray work. Being insoluble in water, acids or alkalies, it passes through the system unchanged and unabsorbed. Hence no untoward action whatever need be feared. Also suitable for use as Reagent. When ordering Barium Sulphate for X-Ray work specify "Squibb." Send for literature.

BARKER'S POST-PARTUM PILLS. See Pills Laxative, Post-Partum.

Bateman's Pectoral Drops. See Tincture, Pectoral.

BAYBERRY BARK.

Myrica, N. F.; Candleberry; Wax Berry. Dried bark of root of *Myrica cerifera* (Fam. *Myricaceæ*). Used as Digestive, Carminative, Nerve Stimulant. Average Dose: 8 grains (0.5 Gm.).

BAY RUM. See Spirit Myrcia Compound.

BEARBERRY LEAVES. See Uva Ursi.

⊕ Belladonna Leaves, Squibb

Ground for Percolation

tin, lb.

Belladonnæ Folia; Deadly Nightshade Leaves. Dried leaves and tops of *Atropa Belladonna* (Fam. *Solanaceæ*). Assays not less than 0.3 percent. alkaloids. Preparations made from this leaf may assay above official standard and must be adjusted accordingly. Anodyne, Antispasmodic, Antihydrotic. Average Dose: 1 grain (0.065 Gm.). (See also Extract; Fluid-extract; Ointment; Tincture.)

BELLADONNA ROOT.

Belladonnæ Radix. Assays not less than 0.45 percent. alkaloids. Average Dose: $\frac{3}{4}$ grain (0.05 Gm.). (See also Extract; (Fluid extract)

Benzaldehyde, Squibb

bottle, lb. ; $\frac{1}{4}$ lb.

Benzaldehydum; Benzoic Aldehyde; Artificial Essential Oil Almond. Contains not less than 85 percent. C_7H_6O . Colorless or yellowish liquid; odor of bitter almond; burning taste. Sp. gr. about 1.045. Miscible with alcohol, ether, oils; slightly soluble in water. Non-poisonous substitute for oil bitter almond; also Flavoring. Average Dose: $\frac{1}{2}$ minim (0.03 mil).

BENZENE.

Benzol Medicinal. C_6H_6 . From light oil of coal tar. Colorless liquid; strong odor; burning taste. Soluble in alcohol, ether; insoluble in water. Used in Hodgkin's disease, leukemia, etc. Dose: 8 to 15 minims (0.5 to 1 mil [Cc.]) four times a day, in capsules or as emulsion. Use cautiously.

BENZIN, PETROLEUM, PURIFIED.

Benzinum Purificatum; Petroleum Ether. Purified distillate from petroleum, consisting of hydrocarbons chiefly of marsh-gas series. Sp. gr. 0.638 to 0.660. Freely soluble in alcohol; miscible with chloroform, benzene, and oils (excepting castor oil); insoluble in water. Antiparasitic dermic; in scabies, pediculosis, barber's itch, etc.; but used chiefly pharmaceutically. Very inflammable.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

⊕ **Benzoin, Squibb**

tin, lb. ; ¼ lb.

Benzoinum; Gum Benjamin; Gum Benzoin. Extra select Siam gum, in nice, clean tears; wholly different from the regular market article. Balsamic resin obtained from *Styrax Benzoin* and other species of *Styrax* (Fam. *Styracaceæ*). Yields less than 2½ percent. ash, and especially rich in benzoic acid. Yellowish-brown, pebble-like tears; vanilla-like odor; slightly acrid taste. Soluble in solution sodium or potassium hydroxide, in 5 parts warm alcohol. Wound Antiseptic, 1:5 ointment; Expecto- rant, in inhalations. Used mainly technically and phar- maceutically. Average Dose: 15 grains (1 Gm.). (See also Fluid; Tincture).

Benzoinated Cream, Squibbsmall jars per doz. ; oz. jars, per doz.
½-oz. tubes, per doz.

This medicated Cold Cream has been supplied for many years as a special laboratory product. It has been proved a most valuable article in cases where the action of ordinary cold cream is insufficient to effect prompt relief. It differs from the ordinary article in being a therapeutic salve instead of a simple mechanical ointment. It is used for the same purposes for which cold cream is so generally employed, but being compounded with other remedial agents, it possesses valuable medicinal properties which permit of its wider and more beneficial use as a safe and healing application. It contains benzoin, camphor, expressed oil almond and natural beeswax. Emollient, Antiseptic and Antipruritic.

Benzol (Benzene) Reagent. See Reagents (Part IV).

Benzonaphthol. See Betanaphthol Benzoate.

BENZOSALIN.

Methyl Benzoylsalicylate. Fine, white crystals, of faint aromatic odor. Soluble readily in chloroform, moderately in alcohol; insoluble in water. Intestinal Antiseptic. Dose: 8 to 15 grains (0.5 to 1 Gm.).

BENZOSOL.

Benzoyl-guaiacol; Guaiacol Benzoate. $C_6H_4(OCH_3).C_6H_5-CO_2$. White powder; slight odor and taste; 54 percent. guaia- col. Soluble in alcohol, chloroform; sparingly soluble in ether; insoluble in water. Intestinal and Urinary Antiseptic, Anti- diabetic. Dose: 3 to 10 grains (0.2 to 0.65 Gm.).

⊕ **BENZOSULPHINIDE.**

Benzosulphinidum; Saccharin; Benzoylsulphonic Imide; Glu- side. $C_7H_5O_3NS$. White, nearly odorless powder; intensely sweet taste. 1 Gm. dissolves in 290 mls (Cc.) water, 31 alcohol; slightly soluble in ether or chloroform; easily in am- monia water, alkaline hydroxide or sodium bicarbonate solution. About 500 times as sweet as cane sugar. Non-fermentable sweetener; corrigent of bitter or acrid drugs. Rarely medicinally, as acidifier of urine in cystitis. Average Dose: 3 grains (0.2 Gm.), well diluted. (See also Tablets [Part II].)

⊕ **Benzosulphinide-Sodium.** See Sodium Benzosulphinide.

BERBERIS.

Berberis, N. F.; Barberry Root; Oregon Grape Root. Dried rhizome and roots of *Berberis aquifolium* and other species of *Berberis* (Fam. *Berberidaceæ*). Bitter Tonic, like hydrastis. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

BESTUSCHEFF'S TINCTURE. See Tincture Iron Chloride, Ethereal.

† **BETAEUCAINE HYDROCHLORIDE.**

Betaeucainæ Hydrochloridum; Trimethylbenzoyloxypiperidine Hydrochloride. $C_{15}H_{21}NO_2 \cdot HCl$. White, odorless powder. 1 Gm. dissolves in 30 mls (Cc.) water, 35 alcohol, 6 chloroform. Incompatible with alkalis and their carbonates. Local Anesthetic; in 2 percent. solution for eye, 5 to 10 percent. solution for nose and throat.

⊕ **Betanaphthol, Squibb** 1-oz. vial

Betanaphthol; Naphthol. $C_{10}H_7OH$. A monohydroxy-phenol occurring in coal tar, but usually made from naphthalene. Colorless or buff-colored, shining laminæ; faint, phenol-like odor; sharp taste. 1 Gm. dissolves in about 1000 mls (Cc.) water, 0.8 alcohol, 17 chloroform, 1.3 ether; soluble in glycerin, olive oil, alkali-hydroxide solutions. Antiparasitic Dermic; Intestinal Antiseptic, Anthelmintic. Internally, in typhoid fever, chronic diarrhea, etc.; externally in psoriasis, scabies and other parasitic skin diseases. Also used as Reagent. Average Dose: 4 grains (0.25 Gm.). Applied in 3 to 10 percent. ointment. Incompatible on trituration with antipyrine, camphor, menthol or phenol.

Betanaphthol Benzoate, Squibb 1-oz. vial

Benzonaphthol. $C_6H_5CO_2 \cdot C_{10}H_7$. Creamy-white, nearly odorless and tasteless needles or powder; darkens with age. Soluble in alcohol, ether, chloroform. Intestinal Antiseptic. Dose: 3 to 8 grains (0.2 to 0.5 Gm.).

BETANAPHTHOL-BISMUTH. See Bismuth Betanaphtholate.

BETH ROOT. See Trillium.

BISMUTH BETANAPHTHOLATE.

Bismuthi Betanaphtholas; Betanaphthol-Bismuth. Newly official. 15 percent. betanaphthol, 75 percent. bismuth oxide. Buff-colored to grayish-brown, almost odorless, tasteless powder, nearly insoluble in water, alcohol, chloroform, ether. Intestinal Antiseptic. Average Dose: 8 grains (0.5 Gm.).

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

Bismuth Carbonate. See Bismuth Subcarbonate.

Bismuth Citrate, Squibb bottle, oz.

$\text{BiC}_6\text{H}_5\text{O}_7$. Dropped from U. S. P. White, odorless, tasteless powder. When fresh or not too old, soluble in ammonia water and solutions alkaline citrates; insoluble in water and alcohol. Stomachic, Astringent; also Reagent. **Ordinary Dose:** 2 grains (0.13 Gm.).

Bismuth Citrate Soluble. See Bismuth and Ammonium Citrate.

Bismuth Gallate Basic. See Bismuth Subgallate.

Bismuth Magma, Squibb bottle, pint

Magma Bismuthi; Milk of Bismuth. Yields 5.6 to 6.2 percent. bismuth oxide. Each fluidounce represents equivalent of about 40 grains bismuth subnitrate, suspended in plain distilled water. Antacid, Gastro-intestinal Astringent and Sedative. **Average Dose:** 1 fluidrachm (4 mils [Cc.]). Keep protected against light; shake well before dispensing.

Bismuth, Milk of. See Bismuth Magma.

Bismuth Nitrate Reagent. See Reagents (Part IV).

Bismuth Oxide Hydrated, Squibb bottle, oz.

$\text{Bi}(\text{OH})_3$. White, bulky, odorless powder. To make *Cremor Bismuthi* or Cream of Bismuth, mix 20 parts of this oxide with 80 parts water. Antacid, Gastric Protective, internally; Astringent, locally. Also Reagent. **Dose:** 5 to 20 grains (0.3 to 1.3 Gm.).

Bismuth Oxychloride, Squibb bottle, oz.

Bismuthyl Chloride; Pearl White. BiOCl . White, odorless, lustrous powder. Soluble in acids; insoluble in water. Used in face powders, etc.

Bismuth Oxyiodide, Squibb bottle, oz.

Bismuth Subiodide. BiOI . Brownish-red, odorless, tasteless powder, insoluble in ordinary solvents. Antiseptic, Vulnery. **Dose:** 3 to 10 grains (0.2 to 0.65 Gm.).

Bismuth Oxynitrate. See Bismuth Subnitrate.

Bismuth Salicylate Basic. See Bismuth Subsaliolate.

⊕ **Bismuth Subcarbonate, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Bismuthi Subcarbonas; Bismuth Carbonate $(\text{BiO})_2\text{CO}_3$. Yields not less than 90 percent. bismuth oxide, and free from alkalis, arsenic, alkaline earths and heavy metals. White, odorless, tasteless powder. Insoluble in water, alcohol, ether, etc. Protective Vulnery, Gastric Sedative, Intestinal Astringent; also used as Reagent and in X-ray work. **Average Dose:** 8 grains (0.5 Gm.). Incompatible with sulphides, sulphur, acids and acid salts. (See also Tablets [Part II].)

⊕ **Bismuth Subgallate, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Bismuthi Subgallas; Basic Bismuth Gallate. $\text{Bi}(\text{OH})_2\text{C}_7\text{H}_5\text{O}_5$. Yields 52 to 57 percent. bismuth oxide. Contains no free gallic acid. Bright-yellow, odorless powder. Soluble in solutions of alkali hydroxides; insoluble in ordinary solvents. Drying Antiseptic externally; Astringent internally. Average Dose: 8 grains (0.5 Gm.). Applied pure or as 10 to 20 percent. dusting-powder or ointment. Incompatible with acids, alkalies, sulphides and sulphur. (See also Tablets [Part II].)

Bismuth Subiodide. See Bismuth Oxyiodide.

⊕ **Bismuth Subnitrate, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Bismuthi Subnitratis; Magistery of Bismuth; Bismuth Oxynitrate. $\text{BiONO}_3 \cdot \text{H}_2\text{O}$ or $\text{Bi}(\text{OH})_2\text{NO}_3$. Pure, nice white and bulky. Not only fully meets the U. S. P. purity requirements, but exceeds them. White, odorless, almost tasteless powder. Insoluble in ordinary solvents. Incompatible with gallic, salicylic and tannic acids, solutions of alkaline carbonates, sulphides and sulphur. Topical and Gastro-intestinal Astringent and Protective. Average Dose: 8 grains (0.5 Gm.). (See also Reagents [Part IV]; Tablets [Part II].)

⊕ **Bismuth Subsalsicylate, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Bismuthi Subsalsicylas; Basic Bismuth Salsicylate. $\text{Bi}(\text{OH})_2\text{C}_7\text{H}_5\text{O}_3$. Yields 62 to 66 percent. bismuth oxide. White, or nearly white, odorless, tasteless powder. Insoluble in ordinary solvents. External and internal Astringent and Antiseptic. Average Dose: 8 grains (0.5 Gm.). Topically used like iodoform. Incompatible with alcohol, alkali carbonates, and bicarbonates, tannin and iron salts. NOTE: The acid salsicylate is not official, and should not be dispensed when "salsicylate" is called for in prescriptions. (See also Tablets [Part II].)

Bismuth and Ammonium Citrate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Bismuthi et Ammonii Citras; Soluble Bismuth Citrate. A particularly handsome and pure product, scaled with great care. Yields 46 to 52 percent. bismuth oxide. Shining, pearly, odorless scales; metallic taste; very soluble in water, sparingly soluble in alcohol. Stomachic, Astringent. Average Dose: 2 grains (0.13 Gm.). Injected in urethritis in 1:500 solution. Keep well stoppered; becomes opaque, loses ammonia, and sacrifices its solubility on exposure.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

BITTER APPLE. See *Colocynth*.

BITTERSWEET.

Dulcamara, N. F. Dried stems and branches of *Solanum Dulcamara* (Fam. *Solanaceæ*). Used as Alterative. Average Dose: 60 grains (4 Gm.).

BLACKBERRY BARK. See *Rubus*.

BLACK COHOSH. See *Cimicifuga*.

BLACK DROP. See *Vinegar Opium*.

BLACK HAW. See *Viburnum Prunifolium*.

BLACK WASH. See *Lotion, Black*.

BLADDERWRACK. See *Fucus*.

BLANCARD'S PILLS. See *Pills Iron Iodide*.

Blood, Occult, Test Tablets. See under *Tablets (Part II)*.

Blood-Root. See *Sanguinaria*.

BLUE COHOSH. See *Caulophyllum*.

BLUE FLAG.

Iris Versicolor, N. F. Dried rhizome of *Iris versicolor* (Fam. *Iridaceæ*). Cathartic. Average Dose: 30 grains (2 Gm.).

BLUE GUM TREE. See *Eucalyptus*.

Blue Mass or Blue Pill. See *Mass Mercury*.

Blue Stone or Blue Vitriol. See *Copper Sulphate*.

BLUE VERVAIN. See *Vervain*.

BOLDO.

Boldo, N. F. Leaves of *Boldu Boldus* (Fam. *Monimiaceæ*). Aromatic, Mild Diuretic. Average Dose: 8 grains (0.5 Gm.).

BONESET. See *Eupatorium*.

Borax. See *Sodium Borate*.

BORNYL BROMOVALERATE. See *Brovalol*.

Boroglycerin Glycerite. See *Glycerite Boroglycerin*.

BRAYERA.

Brayera, N. F.; Kousso; Cusso. Dried panicles of flowers of *Hagenia abyssinica* (Fam. *Rosaceæ*). Tonic. Average Dose: 240 grains (16 Gm.).

BROMETONE.

Tribrominated Tertiary Butyl Alcohol. $C_4H_7OBr_3$. White crystals; camphor-like odor and taste. Soluble freely in alcohol, ether, chloroform; slightly in water. Nerve Sedative, Antispasmodic. **Dose:** 5 to 10 grains (0.3 to 0.65 Gm.).

BROMINE.

Bromum, N. F. Br. Heavy, dark brownish-red liquid, evolving reddish fumes highly irritating to eyes and lungs; peculiar, suffocating odor; sp. gr. about 3.016. 1 mil (Cc.) dissolves in about 90 mls water; freely soluble in alcohol, ether, chloroform. Caustic (pure), Antiseptic Inhalant (1:500 water); used chiefly technically. **Antidotes:** ammonia by inhalation; sodium carbonate, albumen. Must be kept in cool place and handled with great care. Its vapor is very irritating to mucosæ.

BROMIPIN.

Bromine addition products of fatty acids of sesame oil. Yellow, oily liquids; 10 and $33\frac{1}{3}$ per cent. bromine, respectively. Nervine. **Dose:** 10 percent., 1 to 4 fluidrachms (4 to 15 mls [Cc.]); $33\frac{1}{3}$ percent., 20 to 60 minims (1.3 to 4 mls [Cc.]).

BROMOFORM.

Bromoformum; Formyl Tribromide; Tribromomethane. $CHBr_3$. Heavy liquid; ethereal odor, chloroform-like taste. Sp. gr. 2.595 to 2.620. Miscible with chloroform, alcohol, ether, oils; soluble in 80 parts glycerin; very slightly in water. Antispasmodic and Sedative, chiefly in whooping-cough. **Average Dose:** 3 minims (0.2 mil [Cc.]), in hydroalcoholic solution or emulsion. **Antidotes:** atropine or strychnine hypodermically; amyl nitrite or ammonia by inhalation; oxygen. Bromoform is so extremely volatile that the vials are liable to lose in weight rapidly on keeping. It is hence best ordered in small quantities, and should be kept in cool place protected against light.

BROMURAL.

Monobromisovalerylurea. White, almost tasteless needles. Soluble readily in hot water, ether, alcohol or alkalis. Nerve Sedative, Hypnotic. **Dose:** 5 to 10 grains (0.3 to 0.65 Gm.).

BROOM TOPS. See *Scoparius*.

BROVALOL.

Bornyl Bromovalerate. Colorless, oily, faintly aromatic liquid; 25.2 percent. bromine. Soluble in alcohol, chloroform or ether; insoluble in water. Analeptic, Nerve Sedative. **Dose:** 4 to 12 grains (0.25 to 0.75 Gm.), in capsules.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

BRYONIA.

Bryonia, N. F.; Bryony. Dried root of *Bryonia alba* or *B. dioica* (Fam. *Cucurbitaceæ*). Drastic Resinous Cathartic; used in dropsies, pleurisy, etc. **Average Dose:** 1 Gm. (15 grains). (See also Fluidextract; Tincture.)

Buchu, Squibb

tin, lb. ; ¼ lb.

Buchu. Dried leaves of *Barosma betulina* (Short Buchu) or of *B. serratifolia* (Long Buchu). (Fam. *Rutaceæ*). The article here listed is *short buchu* of best quality; in odor, taste, and other characteristics satisfying the most exacting requirements. Diuretic, Anticatatarrhal; chiefly in diseases of bladder and kidneys. **Average Dose:** 30 grains (2 Gm.). (See also Fluidextract; Tablets [Part II].)

BUCKBEAN. See *Menyanthes*.

BUCKTHORN BARK. See *Frangula*.

BUCKTHORN BERRIES.

Rhamnus Cathartica, N. F. Dried, ripe fruit of *Rhamnus cathartica* (Fam. *Rhamnaceæ*). Purplish-black externally; faint, unpleasant odor; sweetish, then nauseating, bitter taste. Cathartic. **Average Dose:** 15 grains (1 Gm.).

BURDOCK. See *Lappa*.

Burow's Solution. See Solution Aluminum Acetate.

BUTTERNUT BARK. See *Juglans*.

CACAO. See *Cocoba*.

Cacao Butter. See Oil *Theobroma*.

CACTUS GRANDIFLORUS.

Cactus Grandiflorus, N. F.; Night-blooming Cereus. Fresh succulent stems of wild-growing *Cactus grandiflorus* (*Cereus grandiflorus*; Fam. *Cactaceæ*). Used in neurotic heart disturbances; value doubted by many.

Cadmium Iodide Reagent. See Reagents (Part IV).

Cadmium-Potassium Iodide Reagent.

See Reagents (Part IV).

Cadmium Sulphate Reagent. See Reagents (Part IV).

⊕ Caffeine, Squibb

carton, oz.

Caffeina; Coffeine; Theine; Guaranine; Trimethylxanthine. $C_8H_{10}O_2N_4 \cdot H_2O$. Base from leaves of *Thea sinensis* (Fam. *Ternstræmiaceæ*), or dried seeds of *Coffea arabica* (Fam. *Rubiaceæ*). White, silky, bitter needles; efflorescent in dry air. 1 Gm. dissolves in 46 mils (Cc.) water, 66 alcohol, 5.5 chloroform, 530 ether. Aqueous solubility increased by potassium bromide, sodium benzoate, sodium salicylate. Diuretic; Cardiac, Respiratory and Psychic Stimulant. **Average Dose:** 2½ grains (0.15 Gm.). See also Tablets [Part II].)

⊕ **Caffeine Citrated, Squibb** bottle, oz.

Caffeina Citrata. Unstable compound of caffeine and citric acid, containing when dried 48 percent. anhydrous caffeine. White, odorless powder; of slightly bitter, acid taste. Soluble in about 25 parts water, in mixture of equal volumes chloroform and alcohol. **Average Dose:** 5 grains (0.3 Gm.). (See also Tablets [Part II].)

CAFFEINE CITRATED, GRANULAR EFFERVESCENT.

Caffeina Citrata Effervescens. 4 percent. official citrated caffeine. **Average Dose:** 60 grains (4 Gm.).

Caffeine Hydrobromide, Squibb

bottle, oz. ; 1/8-oz. vial

$C_8H_{10}N_4O_2 \cdot HBr \cdot 2H_2O$. Large, white crystals, turning reddish on exposure. Soluble in water, with decomposition.

⊕ **Caffeine and Sodium Benzoate, Squibb**

bottle, oz. ; 1/8-oz. vial

Caffeina Sodio-Benzoeas. Newly official. White, odorless, slightly bitter powder; assays when dried 46 to 50 percent. anhydrous caffeine. 1 Gm. dissolves in 1.1 mls (Cc.) water, some caffeine separating on standing; in 30 mls alcohol. Cardiac, Respiratory and Psychic Stimulant. **Average Dose:** hypodermically, 3 grains (0.2 Gm.); per os, 5 grains (0.3 Gm.)

Caffeine Sodio-Salicylate, Squibb

bottle, oz. ; 1/8-oz. vial

Caffeina Sodio-Salicylas, N. F. White, odorless, slightly bitter powder, containing about 50 percent. caffeine. 1 Gm. dissolves in about 2 mls (Cc.) water. Cardiac Stimulant, Analgesic; used mainly hypodermically, in rheumatism complicated with heart disease, and in threatening collapse. **Average Dose:** 3 grains (0.2 Gm.). (See also Ampuls.)

Cajuputol. See Eucalyptol.

CALABAR BEAN. See Physostigma.

CALAMINE, PREPARED.

Calamina Præparata, N. F.; Lapis Calaminaris. Native zinc carbonate, calcined; or calcined zinc carbonate containing small amount ferric oxide. Fine, pink, odorless, tasteless powder. Insoluble in ordinary solvents. Protective, Siccative Dermic.

Calcium Acetate. See list of Reagent Chemicals, under Reagents (Part IV).

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Calcium Bromide, Squibb

bottle, lb. ; oz.

Calcii Bromidum. $\text{CaBr}_2 \cdot 2\text{H}_2\text{O}$; not anhydrous salt formerly official. White, granular, odorless; sharp, saline taste; very deliquescent. 1 Gm. dissolves in 0.7 mil (Cc.) water, 1.3 mils alcohol; insoluble in chloroform or ether. Nerve Sedative, similar to but more irritant than sodium bromide. Average Dose: 15 grains (1 Gm.). Keep well stoppered, in dry place.

Calcium Carbonate Precipitated. See Chalk Precipitated.

Calcium Carbonate Reagent. See Reagents (Part IV).

⊕ Calcium Chloride, Squibbbottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Calcii Chloridum. Hydrated form, containing about 2 molecules crystal water and assaying not less than 75 percent. Ca Cl_2 . White, hard, odorless fragments or granules; sharp, saline taste; very deliquescent. 1 Gm. dissolves in 0.62 mil (Cc.) water, 10 alcohol; insoluble in ether. Used as Hemostatic and Antipruritic, internally, as Antiphlogistic externally; in chronic itching hemorrhagic conditions, urticaria, serum rashes, etc. Average Dose: 8 grains (0.5 Gm.). Incompatible with soluble carbonates, phosphates and sulphates, producing corresponding insoluble salts of calcium. Keep well stoppered in dry place. (See also Reagents [Part IV].)

Calcium Glycerophosphate, Squibbbottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Calcii Glycerophosphas. $\text{C}_3\text{H}_5(\text{OH})_2\text{PO}_4\text{Ca}$. Newly official. White, odorless, almost tasteless, slightly hygroscopic powder. 1 Gm. dissolves in about 50 mils (Cc.) water; citric acid increases solubility. Used as Nerve Tonic, especially in neurasthenia; generally in combination with other glycerophosphates. Average Dose: 4 grains (0.25 Gm.) Solutions do not keep well; 1 minim chloroform to fluidounce retards change. Use cold, sterile, distilled water only. (See also Tablets [Part II].)

Calcium Hypophosphite, Squibbbottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Calcii Hypophosphis. $\text{Ca}(\text{H}_2\text{PO}_2)_2$. White prisms, scales or crystalline powder; nauseous, bitter taste. 1 Gm. dissolves in 6.5 mils (Cc.) water; insoluble in alcohol. Used as general reconstructive tonic, largely in tuberculosis, usually in combination with other hypophosphites. Average Dose: 8 grains (0.5 Gm.). NOTE: Caution should be observed in dispensing this salt as explosion is liable to occur when it is triturated or heated with nitrates, chlorates or other oxidizing agents.

⊕ **Calcium Lactate, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Calcii Lactas. $\text{Ca}(\text{C}_3\text{H}_5\text{O}_3)_2 \cdot 5\text{H}_2\text{O}$. Newly official. White, odorless, nearly tasteless granules. 1 Gm. dissolves in 20 mls (Cc.) water; almost insoluble in alcohol. Alterative, Anticachectic; latterly also Hemostatic, in conditions referable to defective blood coagulability, in operations about nose and throat to prevent postoperative hemorrhage, and in such blood dyscrasias as boils, urticaria, hemoglobinuria, etc. Has characteristic action of calcium; less irritating and hence better adapted to hypodermic use than calcium chloride. **Average Dose** (acc. to U. S. P.): 8 grains (0.5 Gm.); other authorities advise 15 to 20 grains (1 to 1.3 Gm.) an hour before meals in solution. Incompatible with soluble carbonates, phosphates and sulphates, producing corresponding insoluble salts of calcium.

Calcium Lactophosphate Soluble, Squibb

bottle, lb. ; ¼ lb. ; oz.

Calcii Lactophosphas, N. F. Granular combination of calcium lactate and calcium phosphate. Soluble in water; almost insoluble in alcohol. Alterative, Anticachectic; similar to calcium lactate, but not adapted to hypodermic use. **Average Dose**: 8 grains (0.5 Gm.).

CALCIUM MONOIODOBEHENATE. See Sajodin.

Calcium Oxide. See Lime.

Calcium Oxide Reagent. See Reagents (Part IV).

Calcium Phenolsulphonate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Calcium Sulphocarbolate. An exceptionally fine article, free from sulphates, chlorides and metallic impurities. Readily soluble in water. Used as Intestinal Antiseptic. **Dose**: 2 to 5 grains (0.13 to 0.3 Gm.), in solution or tablets.

Calcium Phosphate Precipitated, Squibb carton, lb.

Calcii Phosphas Præcipitatus, N. F. Dropped from U. S. P. $\text{Ca}_3(\text{PO}_4)_2$. White, bulky, odorless, tasteless powder; insoluble in water and alcohol. Reconstructive, like calcium salts in general; in malnutrition, rickets, osteomalacia, etc. Also Reagent. **Average Dose**: 15 grains (1 Gm.).

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Calcium Sulphide Crude, Squibb

bottle, lb. ; ¼ lb. ; oz.

Calcii Sulphidum Crudum; formerly officially called Sulphurated Lime. Not less than 55 percent. CaS. Pale-gray or yellowish powder; hydrogen-sulphide odor; nauseous, alkaline taste. Gradually decomposes on exposure to moist air. Slightly soluble in water; insoluble in alcohol. Antipyric, Alterative; in boils, scrofula, phthisis, etc. Also Depilatory. **Average Dose:** 1 grain (0.065 Gm.). Keep well stoppered. (See also Tablets [Part II].)

CALCREOSE.

Loose chemical combination of equal parts creosote and lime. Dark-brown powder; empyreumatic odor; sharp, phenolic taste. Form of creosote. **Dose:** 5 to 15 grains (0.3 to 1 Gm.).

Calendula, Squibb

tin, lb.

Calendula, N. F.; Marigold. Dried ligulate florets of *Calendula officinalis* (Fam. *Compositæ*). Used externally, as mild Irritant.

Calisaya Bark. See Cinchona.**Calomel.** See Mercury Chloride, Mild.**CALOMELOL.**

Colloidal Calomel. Whitish-gray, odorless, tasteless powder; 80 percent. calomel, 20 percent. proteins. With water it forms an opalescent suspension; insoluble in alcohol or ether; precipitated by acids from its solutions, redissolved by alkalis. Incompatible with soluble hydroxides, carbonates, iodides and oxidizing agents. Succedaneum for calomel internally and externally, in same doses and strengths. *Calomelol Ointment* contains 20 percent. mercury as calomelol.

Calumba, Squibb Ground for Percolation tin, lb.

Calumba; Columbo. Dried root of *Jateorhiza palmata* (Fam. *Menispermaceæ*). Simple Bitter, Stomachic. **Average Dose:** 30 grains (2 Gm.). (See also Fluidextract; Tincture.)

CAMPHO-MENTHOL. See Menthol Camphorated.⊕ **CAMPBOR.**

Camphora; Gum Camphor. $C_{10}H_{16}O$. Ketone obtained from *Cinnamomum Camphora* (Fam. *Lauraceæ*). Sp. gr. 0.990. Very volatile. Freely soluble in alcohol, chloroform, ether, oils; slightly soluble in water. Readily pulverizable in presence of little alcohol, ether or chloroform. Stimulant, Analeptic, Antispasmodic, Antipruritic, Rubefacient; in collapse, flatulence, cramps, spasmodic cough, asthma, neuralgia, etc. **Average Dose:** by mouth, 3 grains (0.2 Gm.); hypodermic, 1½ grains (0.1 Gm.). (See also Ampuls; Spirit.)

Camphor Monobromated, Squibb

* Crystals or Powdered bottle ; ¼ lb. ; oz.

Camphora Monobromata; Bromcamphor. $C_{10}H_{15}OBr$. Bromine substitution product of camphor. Colorless needles or scales, of mild camphoraceous odor and taste. Almost insoluble in water. 1 Gm. dissolves in 6.5 mls (Cc.) alcohol, 0.5 chloroform, 1.6 ether. Sedative, Antispasmodic, Antineuralgic, Average Dose: 2 grains (0.13 Gm.).

CANELLA.

Canella, N. F. Dried inner bark of *Canella Winterana* (Fam. *Canellaceæ*). Cinnamon-like odor; warm aromatic taste. Aromatic Bitter, Corrigent. Average Dose: 30 grains (2 Gm.).

CANNABIS.

Canella, N. F. Dried inner bark of *Canella Winterana* (Fam. *sativa* or of variety *indica* (Fam. *Moraceæ*). Physiological assay required by U. S. P. Sedative, Anodyne. (See also Extract; Fluidextract; Tincture.)

⊕ Cantharides Powdered, Squibb tin, ¼ lb.

Cantharis; Spanish Flies. The thoroughly dried beetle *Cantharis vesicatoria*. Best Russian beetle, assaying at least 0.6 percent. cantharidin, as officially demanded. Rubefacient and Vesicant externally; Genito-urinary Irritant internally. Antidotes: flaxseed tea, opium per rectum, morphine subcutaneously. Oils should be avoided. (See also Cerate; Collodion; Liniment; Tincture.)

Capsicum. See Pepper, Red.**CARAMEL.**

Caramel, N. F.; Burnt Sugar Coloring. Concentrated aqueous solution of product obtained by heating sugar or glucose until the sweet taste is destroyed and a uniform dark-brown mass results, a little alkali being added while heating. Thick liquid, odor of burnt sugar; pleasant, bitter taste; sp. gr. about 1.35. Mixes clearly with water, diluted alcohol. Coloring agent.

CARAWAY.

Carum; Caraway Seed. Dried fruit of *Carum Carvi* (Fam. *Umbelliferæ*). Aromatic Carminative; Condiment. Average Dose: 15 grains (1 Gm.).

Carbon Disulphide Reagent. See Reagents (Part IV).**Carbon Tetrachloride Reagent. See Reagents (Part IV).**

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

⊕ **Cardamom Seed, Squibb**

* Whole	tin, lb.	; 1/4 lb.
Ground for Percolation		tin, lb.

Cardamomi Semen. Dried seeds of *Elettaria Cardamomum* (Fam. *Zingiberaceæ*). Free from twigs, leaves and other portions of plant, possessing a characteristic, agreeably aromatic odor and taste, yielding less than officially permitted quantity of ash. Carminative, Corrective; Flavor. **Average Dose:** 15 grains (1 Gm.). (See also Fluid; Fluidextract; Tincture.)

Cardamom Compound, Squibb

Ground for Percolation	tin, lb.
------------------------	----------

Mixture of cardamom, Saigon cinnamon, caraway and cochineal, intended for preparation of Tincture Cardamom Compound.

CARGENTOS.

Colloidal Silver Oxide. 50 percent. Ag. Odorless, tasteless black, shining scales. Forms colloidal suspension with water or glycerin. Antiseptic Astringent, in 5 to 25 percent. suspensions or 10 percent. dusting powder.

CARMINE.

Carminum, N. F. Aluminum lake of coloring principle of cochineal. Irregular, bright red, odorless, tasteless fragments. Soluble freely in ammonia water and alkaline liquids, slightly in water. Red coloring.

CARRAGEEN. See Chondrus.⊕ **Cascara Sagrada, Squibb**

Whole	carton, lb.
* Ground for Percolation	tin, lb.

Cascara Sagrada; Sacred Bark. Dried bark of trunk and branches of *Rhamnus Purshiana* (Fam. *Rhamnaceæ*) thoroughly seasoned. In its selection it is carefully differentiated from barks of allied species. Being the best procurable and well seasoned, preparations made from it are of maximum efficacy. Laxative, acting mainly on colon; has but little tendency to produce secondary constipation. **Average Dose:** 15 grains (1 Gm.). (See also Extract; Fluid; Fluidextract. Tablets [Part II].)

CASCARILLA.

Cascarilla, N. F.; Sweet Bark. Dried bark of *Croton Eluteria* (Fam. *Euphorbiaceæ*). Clove-like odor; warm, aromatic, bitter taste. Aromatic Bitter, like gentian. **Average Dose:** 30 grains (2 Gm.).

Cassia. See Cinnamon, Cassia.

CASSIA FISTULA.

Cassia Fistula, N. F.; Purging Cassia. Dried fruit of *Cathartocarpus Fistula* (Fam. *Leguminosæ*). Laxative, similar to Senna. Average Dose: 60 grains (4 Gm.).

CASTANEA.

Castanea, N. F.; Chestnut Leaves. Dried leaves of *Castanea dentata* (Fam. *Fagaceæ*). Astringent but used mainly in whooping cough. Average Dose: 60 grains (4 Gm.). (See also Fluidextract.)

Cataplasm Kaolin, Squibb special tins, lb. ; ½ lb.

Cataplasma Kaolini, N. F.; Kaolin Poultice. Dropped from U. S. P. Consists of kaolin, boric acid, thymol, methyl salicylate, oil peppermint and glycerin. A very smooth, homogeneous mass, free from grittiness and irritating properties, each of the ingredients being of selected quality.

CATECHU. See Gambir.**CATNEP.**

Cataria, N. F.; Catmint. Dried leaves and flowering tops of *Nepeta Cataria* (Fam. *Labiatae*). Aromatic, mint-like odor, bitter, pungent, aromatic taste. Aromatic Carminative, similar to peppermint. Average Dose: 60 grains (4 Gm.).

CAULOPHYLLUM.

Caulophyllum, N. F.; Blue Cohosh. Dried rhizome and roots of *Caulophyllum thalictroides* (Fam. *Berberidaceæ*). Asserted Diuretic and Emmenagogue. Average Dose: 8 grains (0.5 Gm.).

Caustic Potash. See Potassium Hydroxide.**Caustic Soda.** See Sodium Hydroxide.**CELERY FRUIT.**

Apii Fructus, N. F.; Celery Seed. Ripe fruit of *Apium Graveolens* (Fam. *Umbelliferae*). Agreeable odor; aromatic, warm taste. Domestic Emmenagogue. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

CENTAURY.

Centaurium, N. F. Dried flowering plant of *Erythræa Centaurium* (Fam. *Gentianaceæ*). Faint odor; persistently bitter taste. Bitter Stomachic, similar to gentian. Average Dose: 30 grains (2 Gm.).

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

Cerate, Squibb

jar, lb.

Ceratum; Simple Cerate. Made from white wax and benzoinated lard, modified as necessary for use in southern latitudes or during the hot season, by replacing a portion of the benzoinated lard by white wax. The several ingredients are all of pharmacopœial quality. Emollient, base for cerates.

Cerate, Blistering. See Cerate Cantharides.**CERATE CAMPHOR.**

Ceratum Camphoræ, N. F.; Camphorated Ointment or Cerate. Dropped from U. S. P. Contains 10 percent. camphor liniment, equivalent to 2 percent. camphor, in combination of white wax 7 parts, white petrolatum 3 and benzoinated lard 8. Antiseptic and Antipruritic.

⊕ Cerate Cantharides, Squibb tin, lb. ; ¼ lb.

Ceratum Cantharidis; Blistering Cerate. 100 Gm. represent 35 Gm. best Russian cantharides, extracted with oil turpentine and a little acetic acid. As the active principle of cantharides is not soluble in water, a very thin film of water upon the skin will prevent blistering effect of the cerate. Therefore the skin should be thoroughly cleansed before applying. Soap and water are usually effective, but frequently it is necessary to resort to diluted acetic acid or vinegar, which not only removes the excretions from the skin, but is an excellent solvent of the active principle of cantharides.

CERATE LEAD SUBACETATE.

Ceratum Plumbi Subacetatis, N. F.; Goulard's Cerate; Lead Cerate. Combination of solution lead subacetate 20 percent., camphor 2 percent., with wool-fat, white wax and white petrolatum. Astringent, in inflammatory cutaneous lesions.

CERATE ROSIN.

Ceratum Resinæ; Basilicon Ointment. Combination of rosin 35 parts, lard 50, wax 15. Antiphlogistic, Discutient; to "draw."

Cerate Rosin Compound, Squibb

jar, lb.

Ceratum Resinæ Compositum, N. F.; Deshler's Salve. Dropped from U. S. P. Combination of rosin 45 parts, yellow wax 45, suet 60, turpentine 23, linseed oil 27. Antiphlogistic, Discutient; in external inflammations, to "draw."

Cerium Oxalate, Squibb

carton ; ¼ lb. oz.

Cerii Oxalas. Natural mixture of oxalates of cerium, didymium, lanthanum, and other associated elements. The chemical formula cannot therefore be stated. White or pinkish-white, odorless, tasteless powder, insoluble in ordinary solvents. Gastric Sedative; in vomiting of pregnancy, seasickness, etc. Average Dose: 3 grains (0.2 Gm.). (See also Tablets

CETACEUM. See *Spermaceti*.

[Part II].)

⊕ **Chalk Precipitated, Squibb** carton, lb.

CaCO_3 . Particularly acceptable for pharmaceutical purposes, dentifrices, etc. Nearly insoluble in water; insoluble in alcohol. Carbonic acid and ammonium salts increase aqueous solubility. Antacid. Average Dose: 15 grains (1 Gm.). Offered in three densities; Light, Medium, and Heavy. On unspecified orders the *medium* grade is supplied. Write for quotations on bulk quantities.

CHALK PREPARED.

Creta Præparata; Drop Chalk. CaCO_3 . Differs from precipitated chalk, in that it is a native calcium carbonate freed from most of its impurities by elutriation. White to grayish-white, odorless, tasteless powder. Insoluble in the ordinary solvents. Antacid. Average Dose: 15 grains (1 Gm.).

Chamomile, German. See *Matricaria*.**CHANNING'S SOLUTION**

See Solution Mercury and Potassium Iodide.

CHAPMAN'S MIXTURE. See Mixture Copaiba and Opium.⊕ **Charcoal Powdered, Squibb** bottle, lb. ; $\frac{1}{4}$ lb.

Carbo Ligni. C. Soft-wood charcoal, offered in fine powder. Antizymotic, Absorbent; in flatulent dyspepsia, fetid breath, etc. Average Dose: 15 grains (1 Gm.). (See also Tablets and Troches [Part II].)

CHEMICAL FOOD. See Syrup Phosphates Compound.**CHESTNUT LEAVES.** See *Castanea*.**CHIMAPHILA.**

Chimaphila, N. F.; Pipsissewa. Dried leaves of *Chimaphila umbellata* (Fam. *Ericaceæ*). Formerly used as Tonic, Astringent, Diuretic. Average Dose: 30 grains (2 Gm.).

CHINOSOL.

Oxyquinoline Sulphate. Yellow powder; saffron odor; astringent, aromatic taste. Readily soluble in water; sparingly in alcohol; insoluble in ether. Antiseptic (1:500 to 1:3000 solution), Antizymotic. Dose: 3 to 5 grains (0.2 to 0.3 Gm.). Incompatible with lead acetate, mercuric chloride, iron salts, etc.

CHIONANTHUS.

Chionanthus, N. F.; Fringe Tree Bark. Dried bark of root of *Chionanthus virginica* (Fam. *Oleaceæ*). Characteristic odor; bitter taste. Used as Alterative and Aperient. Average Dose: 30 grains (2 Gm.).

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

CHIRATA.

Chirata, N. F.; *Chiretta*. Dried plant of *Swertia Chirayita* (Fam. *Gentianaceæ*). Bitter Stomachic, similar to gentian. Average Dose: 15 grains (1 Gm.).

Chloral Camphorated, Squibb

bottle, oz.

Chloralum Camphoratum, N. F. Equal parts chloral and camphor, liquefied. Transparent, colorless, oily liquid. Soluble in alcohol, ether, oils; insoluble in water. Topical Anodyne, in neuralgia, toothache, etc.

Chloramine-T, Squibbbottle, 6 $\frac{2}{3}$ ozs. ; 582 grs.

Sodium Para-Toluenesulfonchloramine. $\text{CH}_3\cdot\text{C}_6\text{H}_4\cdot\text{SO}_2\text{Na}:\text{NCl}_2\cdot 3\text{H}_2\text{O}$. White powder; slight chlorous odor. Soluble in water; insoluble in oils. Introduced by Drs. Carrel, Dakin and colleagues as a water-soluble Germicide and Wound Disinfectant acting much like the hypochlorites but being less irritating and more stable. Used chiefly in 1 or 2% solutions; in nose and throat in $\frac{1}{4}\%$ solution. (See next title, and Tablets [Part II]; also Dichloramine-T and Halazone Tablets.)

Chloramine-T Surgical Paste, Squibbjar, lb. ; $\frac{1}{4}$ lb. ; 2 ozs.

A white, odorless paste, of "vanishing cream" type. Contains 1% chloramine-T (Dakin), combined with a neutral base (sodium stearate) according to formula of Dr. Alexis Carrel. Introduced by Drs. Carrel, Dakin and colleagues as Germicide and Wound Disinfectant.

⊕ **Chloral Hydrate Crystals, Squibb** g. s. bottle, oz.

Chloralum Hydratum. $\text{C}_2\text{HCl}_3\text{O}\cdot\text{H}_2\text{O}$. Colorless, transparent, rhomboidal crystals; aromatic, penetrating odor; bitterish, caustic taste. 1 Gm. dissolves in 0.25 mil (Cc.) water, 1.3 alcohol, 2 chloroform, 1.5 ether; very soluble in olive oil; soluble also in glycerin. Hypnotic, Antispasmodic, Analgesic; also Reagent. Contraindicated in gastritis and fatty heart. Its continued administration is liable to produce a habit. Average Dose: 8 grains (0.5 Gm.), well diluted. Absorbed very quickly (5 to 10 minutes). Liquefies when triturated with about an equal quantity camphor, menthol, thymol, or phenol. Antidotes: cocaine, atropine or strychnine, hypodermically; stimulants: oxygen or amyl nitrite by inhalation. Incompatible with alkalis and alkali carbonates. NOTE: When kept in cork-stoppered bottles Chloral Hydrate is liable to become discolored, from chemical action on the cork. Unless otherwise specified, we supply it only in glass-stoppered bottles. Because of its volatility it should be kept carefully stoppered, in a cool place.

CHLORAZENE. Brand of Chloramine-T.

CHLORBUTANOL.

Acetone-Chloroform; Chloretone. White, volatile crystals; camphoraceous odor and taste. Soluble in alcohol, chloroform, glycerin, oils; in about 125 parts water. Local Anesthetic, Sedative, Antiseptic. Dose: 5 to 20 grains (0.3 to 1.3 Gm.). Used locally in saturated aqueous solution.

Chlorcosane, Squibb bottle, pint, : ¼ pint

Chlorinated Paraffin. New oil-solvent for Dichloramine-T, devised by Drs. Dakin and Dunham. Bland, tasteless, yellow, non-irritant, non-toxic, stable oil, which will hold 8 to 10 per cent. Dichloramine-T in solution. To prepare solutions, warm Chlorcosane, stir-in Dichloramine-T until dissolved, filter if desired (usually not necessary), and cool to suitable temperature for use. For wounds, 2 to 5 percent. solutions of Dichloramine-T are used, in nose and throat 1 percent. or weaker applied with swab, director or atomizer. While Chlorcosane solutions of Dichloramine-T keep for quite some time they should be discarded if they contain a precipitate that does not disappear on gently warming.

CHLORETONE. Brand of Chlorbutanol.

⊕ **Chloroform, Squibb** For Anesthesia.

lb. ; ½ lb. ; ¼ lb. ; 2 ozs. ; oz.

Dropping Ampul 50 Gm. ; 25 Gm.

Chloroformum; Formyl Trichloride. CHCl_3 . Made and purified in the Squibb Laboratories by a process yielding a product above pharmacopœial requirements; contains less than 1 percent. of alcohol, and is free from chlorides, free chlorine, chlorinated pyrogenous compounds, and all impurities decomposable by sulphuric acid. Chloroform is soluble in about 210 times its volume of water, miscible with alcohol, ether, benzin and oils. Sp. gr. 1.474 to 1.478. General Anæsthetic; Analgesic, Antispasmodic. Used also pharmaceutically and as Reagent. Average Dose: (by mouth) 5 minims (0.3 mil [Cc.]), dissolved in elixir; avoid water. Antidotes: If venous engorgement of head and neck exists, artificial respiration (Schæfer's method). If cerebral anemia exists, inversion of patient, artificial respiration while inverted. Always first empty the lungs of vapor. Atropine or camphor hypodermically; amyl nitrite or ammonia by inhalation. Caution: Chloroform vapor decomposes on contact with a flame or white-hot

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

⊕ **Chloroform, Squibb (Cont.)**

solids; chlorine, hydrochloric acid gas, phosgene and other intensely irritating products being produced. Therefore, chloroform should not be administered by artificial light unless the flames or wires are protected by a closed case. Heaters (grates, stoves, electric, etc.) should have all glowing surfaces enclosed. Always provide for the rapid escape from the room of all decomposition products. NOTE. Chloroform is not to be relied upon for anæsthesia after the container has been opened and the product exposed to the air for some time.

CHONDRUS.

Chondrus; Irish Moss; Carrageen. Dried plant of *Chondrus crispus* or of *Gigartina mamillosa* (Fam. *Gigartinaceæ*). Demulcent, Lubricant.

⊕ **CHROMIUM TRIOXIDE.**

Chromii Trioxidum; so-called Chromic Acid; Chromic Anhydride. CrO_3 . Small, dark purplish-red crystals, deliquescent in moist air. 1 Gm. dissolves in 0.6 mil (Cc.) water; decomposed by organic solvents. Caustic, Astringent; in ulcers, hypertrophic coryza, sweating feet, etc., as 5 to 20 percent, aqueous solution. Antidotes: magnesia or chalk; demulcents. Because of its activity as an oxidizing agent, great caution should be observed in bringing it into contact with organic substances, such as alcohol, ether, glycerin, cork, tannic acid, sugar and collodion. Disregard hereof is liable to result in dangerous accident.

Chromium Trioxide Reagent. See Reagents (Part IV).

⊕ **CHRYSAROBIN.**

Chrysarobinum; often erroneously called Chrysophanic Acid. Mixture of neutral principles extracted from goa powder. Brownish to orange powder; tasteless, odorless; irritating to mucous membranes. 1 Gm. dissolves in 385 mils (Cc.) alcohol, 12.5 chloroform, 16 ether; very slightly soluble in water. Antiparasitic, Antiseptic, in 6 percent. ointment, in psoriasis, trichophytosis, alopecia areata, etc. Poisonous. No special antidotes known.

CIMICIFUGA.

Cimicifuga; Black Cohosh; Black Snakeroot; Macrotys. Dried rhizome and roots of *Cimicifuga racemosa* (Fam. *Ranunculaceæ*). Used as Alterative, Sedative, Emmenagogue; in rheumatism, chorea, hysteria, dysmenorrhea, etc. Average Dose: 15 grains (1 Cm.).

⊕ **Cinchona, Squibb****Ground for Percolation**

tin, lb.

Cinchona; Calisaya Bark; Yellow Cinchona. Dried bark of *Cinchona Ledgeriana*, *C. Calisaya*, and of hybrids of these (Fam. *Rubiaceæ*). Special care is observed in the selection to insure botanical authenticity. Assays not less than 5 percent. alkaloids. Antiperiodic, Bitter Tonic. **Average Dose:** 15 grains (1 Gm.). (See also Extract; Fluidextract.)

Cinchona Compound Ground, Squibb**For Percolation**

tin, lb.

Mixture of 5 parts red cinchona, 4 parts bitter orange peel, and 1 part serpentaria, for preparing Tincture Cinchona Compound.

⊕ **Cinchona, Red, Squibb***** Ground for Percolation**

tin, lb.

Powdered

tin, lb. ; ¼ lb.

Cinchona Rubra; Red Bark; Red Peruvian Bark. Dried bark of *Cinchona succirubra* or its hybrids (Fam. *Rubiaceæ*), assaying not less than 5 percent. alkaloids. Uses and dose, as cinchona. (See also Fluid; Fluidextract; Tincture.)

Cinchonidine (Alkaloid), Squibb

bottle, oz.

$C_{19}H_{22}ON_2$. Alkaloid from cinchona. White crystals. Soluble in alcohol, chloroform, dilute acids; slightly in ether; insoluble in water. Bitter Tonic, Antiperiodic, like quinine. **Dose:** tonic, 1 to 2 grains (0.065 to 0.13 Gm.), in pills or syrup; antiperiodic, 15 grains (1 Gm.), between paroxysms.

Cinchonidine Salicylate, Squibb

bottle, oz.

$C_{19}H_{22}ON_2 \cdot C_7H_6O_3$. Colorless, microscopic crystals or needles. Soluble readily in alcohol, sparingly in water. Antiperiodic, Antirheumatic; chiefly in subacute and chronic rheumatism. **Dose:** 15 to 30 grains (1 to 2 Gm.) per day.

Cinchonidine Sulphate, Squibb

bottle, oz. ; tin, 5 ozs., per oz.

Cinchonidinæ Sulphas. $(C_{19}H_{22}ON_2)_2 H_2SO_4 \cdot 2H_2O$. White, glistening, odorless, very bitter needles or prisms. 1 Gm. dissolves in 65 mls (Cc.) water, 90 alcohol, 620 chloroform; nearly insoluble in ether. Antiperiodic, Bitter Tonic, like quinine. **Average Dose:** $2\frac{1}{2}$ grains (0.15 Gm.).

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Cinchonine Sulphate, Squibb

bottle, oz. . . . ; tin, 5 ozs., per oz.

Cinchoninæ Sulphas. ($C_{19}H_{22}ON_2$)₂ H₂SO₄.2H₂O. White, odorless, bitter crystals or prisms. 1 Gm. dissolves in 60 mls (Cc.) water, 12.5 alcohol, 47 chloroform, 3230 ether. Antiperiodic, Bitter Tonic. **Average Dose:** 2½ grains (0.15 Gm.).

Cineol. See Eucalyptol.**Cinnabar, Artificial.** See Mercury Sulphide Red.**Cinnamon, Cassia, Squibb**

Powdered

tin, lb.

sprinkler-top tins, 4 ozs., per doz. . . . ;
2 ozs., per doz. . . . ; 1 oz., per doz.

Cassia Bark; Chinese Cinnamon. Inner bark of *Cinnamomum Cassia*. Aromatic, Carminative; also used in perfumery and as flavoring. **Ordinary Dose:** 4 grains (0.25 Gm.).

Cinnamon, Ceylon, Squibb

Powdered

tin, lb.

sprinkler-top tins, 4 ozs., per doz.
2 ozs., per doz. . . . ; 1 oz., per doz.

Cinnamomum Zeylanicum. Dried inner bark of cultivated trees of *Cinnamomum Zeylanicum* (Fam. *Lauraceæ*). It is collected by stripping the bark from the shoots and collecting it in bundles. It is then allowed to remain in this state for a while, to undergo fermentation, which makes the subsequent process of removing the outer bark more easy. The bark then contracts, curling up into quills, which are wrapped around each other, the smaller inside, until six or eight layers are formed. Cassia bark is generally found less tightly curled up and each quill separate. It is redder and darker, and has a stronger but less pleasant odor. It is also rougher than Ceylon.

⊕ **Cinnamon, Saigon, Squibb**

Ground for Percolation

tin, lb. . . . ; ¼ lb.

* Powdered

tin, lb.

sprinkler-top tins, 4 ozs., per doz.
2 ozs., per doz. . . . ; 1 oz., per doz.

Cinnamomum Saigonicum. Bark of an undetermined species of *Cinnamomum* (Fam. *Lauraceæ*). Same action and uses as Cassia cinnamon.

Cinnamon, Sumatra, Squibb

tin, lb.

(Powdered)

sprinkler-top tins, 4 ozs., per doz.
2 ozs., per doz. . . . ; 1 oz., per doz.

A high-quality Cinnamon of exquisite flavor and superior strength, practically equalling in these respects the more costly Saigon cinnamon.

Citrine Ointment. See Ointment Mercury Nitrate.

CLEMENS' SOLUTION. See Solution Arsenic, Clemens'.

⊕ Clove, Squibb * Whole	tin, lb.
Powdered	tin, lb.
	sprinkler-top tins, 4 ozs., per doz. ;
	2 ozs., per doz. ; 1 oz., per doz.

Caryophyllus. Dried flower-buds of *Eugenia aromatica* (Fam. *Myrtaceæ*). Cloves are cultivated in the West Indies, Guiana, Cayenne, Sumatra, and Zanzibar, the Molucca Islands having been for a long time the chief source of the best cloves. The buds are at first white, then green and finally red, when they are immediately picked and dried by solar heat. The best cloves are large, dark, brittle, and exude oil on being scratched. The grade quoted is prime quality of most careful selection, and not deprived of any of its oil. Condiment; Aromatic, Carminative, Counter-irritant. **Average Dose:** 4 grains (0.25 Gm.).

COAGULEN.

Extract from blood platelets, with milk sugar. 1 Gm. represents 20 Gm. dried blood. Yellowish, granular powder; slight odor; sweet taste. Freely soluble in water. Coagulant, Hemostatic; usually in 5 percent. solution, locally, or by intramuscular or intravenous injection. (See also Thromboplastin.)

COAL TAR.

Pix Lithanthracis, N. F.; *Pix Carbonis*. Obtained as by-product in destructive distillation of coal. Nearly black, thick liquid or semisolid; naphthalene-like odor; sharp, burning taste. Soluble in chloroform, benzene; slightly soluble in water; partially soluble in alcohol. Antiseptic, Antiparasitic.

Cobalt Chloride Reagent. See Reagents (Part IV).

Cobalt Nitrate Reagent. See Reagents (Part IV).

† ⊖ Cocaine (Alkaloid), Squibb 1/8-oz. vial

Cocaina; Methylbenzoylecgonine. $C_{17}H_{21}O_4N$. Alkaloid obtained from coca. Colorless prisms; slightly bitter taste, producing on tongue temporary numbness. 1 Gm. dissolves in about 600 mls (Cc.) water, 6.5 alcohol, 0.7 chloroform, 3.5 ether, 12 olive oil; soluble in liquid petrolatum. Nerve Stimulant, Local Anesthetic, Mydriatic. **Average Dose:** 1/4 grain (0.015 Gm.). **Antidotes:** tannin, emetics; chloral hydrate; amyl nitrite by inhalation; morphine or caffeine hypodermically; stimulants.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. When prescribing, please specify SQUIBB'S.

† ⊕ **Cocaine Hydrochloride, Squibb** 1/8-oz. vial
 Large or * Small Crystals

Cocainæ Hydrochloridum. $C_{17}H_{21}O_4N.HCl$. Colorless prisms, flaky leaflets, or a white, crystalline, permanent powder; slightly bitter taste, and producing on tongue a tingling, followed by numbness. 1 Gm. dissolves in 0.4 mil (Cc.) water, 3.2 alcohol, 12.5 chloroform; soluble in glycerin; insoluble in ether. Local Anesthetic, Nasal Astringent and Mydriatic, externally; Anti-emetic and Cerebral Stimulant, internally. Used in 1 to 4 percent. solution on mucous membranes, in 0.2 to 1 percent. solution hypodermically. **Average Dose:** 1/4 grain (0.015 Gm.). (See also Tablets [Part II].). **NOTE.** Solutions of cocaine hydrochloride after being kept long are partly hydrolyzed; they cannot be sterilized by boiling without some loss, but amount of decomposition is ordinarily insignificant.

COCCULUS INDICUS.

Cocculus Indicus, N. F. Dried fruit of *Anamirta Cocculus* (Fam. *Menispermaceæ*). Parasiticide.

Cochineal, Squibb Powdered tin, lb. ; 1/4 lb.

Coccus; *Coccionella*. Dried female insect, *Pseudococcus cacti* (Fam. *Coccidæ*). Of best quality, and very satisfactory tinctorial power. Its coloring matter is soluble in water, alcohol, or ammonia water; insoluble in oils, slightly soluble in ether.

COCHINEAL COLOR.

Liquor Cocci, N. F. 6.5 Gm. cochineal in 100 mils (Cc.), with potassium carbonate, alum, potassium bitartrate, glycerin, alcohol, water. Red coloring.

COCILLANA.

Cocillana, N. F. Dried bark of *Guarea Rusbyi* (Fam. *Meliaceæ*). Characteristic odor, astringent, nauseating taste. Nauseant Expectorant, similar to ipecac. **Average Dose:** 15 grains (1 Gm.).

COCOA.

Cacao Præparata, N. F.; Soluble Cocoa. Powdered roasted kernels of ripe seeds of *Theobroma Cacao* (Fam. *Sterculiaceæ*). Beverage and Flavor.

† ⊕ **Codeine (Alkaloid), Squibb** 1/8-oz. vial

Codeina; Methylmorphine. $C_{18}H_{21}O_3N.H_2O$. An alkaloid of opium, but usually obtained from morphine by methylation. White, odorless, faintly bitter crystals. 1 Gm. dissolves in 120 mils (Cc.) water, 2 alcohol, 0.5 chloroform, 18 ether. Sedative, Analgesic, Hypnotic, Sedative; in coughs, pains, morphinism, etc. Less constipating and less apt to induce habit than morphine. **Average Dose:** 1/2 grain (0.03 Gm.). (See also Tablets [Part II].)

† **Codeine Hydrochloride, Squibb** 1/8-oz. vial
 $C_{18}H_{21}O_3N.HCl.2H_2O$. Small, white needles. Soluble in about 20 parts water. Action and dose, like codeine alkaloid.

† **Codeine Nitrate, Squibb** 1/8-oz. vial
 Action and dose like codeine alkaloid.

† ⊕ **Codeine Phosphate, Squibb** 1/8-oz. vial
Codeinæ Phosphas. $C_{18}H_{21}O_3N.H_3PO_4.2H_2O$. Fine, white, odorless, bitter needles or powder. 1 Gm. dissolves in 2.3 mls (Cc.) water, 325 alcohol, 4500 chloroform, 1875 ether. Preferred for subcutaneous use. **Average Dose:** 1/2 grain (0.03 Gm.). (See also Tablets [Part II].)

† ⊕ **Codeine Sulphate, Squibb** 1/8-oz. vial
 *Crystals or Powdered

Codeinæ Sulphas. $(C_{18}H_{21}O_3N)_2.H_2SO_4.5H_2O$. Long, glistening, white, efflorescent, odorless, bitter needles or prisms, or powder. 1 Gm. dissolves in about 30 mls (Cc.) water, 1280 alcohol; insoluble in ether or chloroform. Uses and dose same as codeine. (See also Tablets [Part II].)

Colchicine, Squibb 5-gr. vial

Colchicina. $C_{22}H_{25}O_6N$. Alkaloid from colchicum. Pale-yellow leaflets or powder, darkening on exposure to light, of peculiar odor and very bitter taste. 1 Gm. dissolves in 22 mls (Cc.) water, 220 ether; freely soluble in alcohol or chloroform. Antipodagric, Antineuralgic, Alterative; in gout, rheumatism, sciatica, asthma, etc. **Average Dose:** 1/128 grain (0.0005 Gm.), two or three times daily. **Antidotes:** tannin, emetics; opiates; strong coffee and other stimulants. (See also Tablets [Part II].)

COLCHICUM CORM.

Colchici Cormus; Colchicum Root. Dried corm of *Colchicum autumnale* (Fam. *Liliaceæ*). Assays not less than 0.35 percent. colchicine. Antineuralgic, Alterative; chiefly in gout. **Average Dose:** 4 grains (0.25 Gm.). (See also Fluidextract.)

⊕ COLCHICUM SEED.

Colchici Semen. Dried seeds of *Colchicum autumnale*. Assays not less than 0.45 percent. colchicine. Action as of colchicum root. **Average Dose:** 3 grains (0.2 Gm.). (See also Fluidextract; Tincture; Wine.)

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Cold Cream, Squibb

glass jar, 1 lb. ; 3 ozs.,
1-oz. collapsible tubes, per doz.

This product has been added to our list in response to repeated demands from physicians. A superior product delicately perfumed, and safe to use wherever cold cream is required. Perfectly harmless and free from irritating ingredients, hence may be freely applied even to the most tender skin. Does not cause growth of hair; does not become rancid on keeping.

Cold Cream Benzoinated. See Benzoinated Cream.

COLLAGOL.

Colloidal Silver; *Argentum Credé*. Black, crystalline substance. Soluble in 20 parts water. Systemic Disinfectant, Antipyic; largely intravenously or rectally in septicemia, pyemia, puerperal sepsis, etc.; internally in infectious gastric and intestinal diseases; externally in $\frac{1}{5}$ to 1 percent. solution in pus cavities, etc., and as 15 percent. ointment (*Unguentum Credé*) by inunction in mild septicemia and in local infections. **Dose:** 1 to 2 grains (0.065 to 0.13 Gm.) every 12 hours.

COLLODION, BLISTERING. See Collodion, Cantharidal.

COLLODION, CANTHARIDAL.

Collodium Cantharidatum; Blistering or Vesicant Collodion. Represents 60 percent. cantharides extracted with acetone and a little glacial acetic acid, in flexible collodion. The skin must be thoroughly cleansed (with vinegar, preferably) and dried before applying this collodion, as the active principle of cantharides is not soluble in water. If this precaution is not observed, there is danger of failure to secure the full vesicating action. Keep well stoppered, away from flame. Inflammable!

⊕ Collodion (Contractile), Squibb

bottle, lb. ; $\frac{1}{4}$ lb. ; oz. vials, per doz.

Collodium. Each 100 mils contains 4 Gm. pyroxylin dissolved in mixture of alcohol (1) and ether (3). Employed for drawing together the edges of incised wounds and for covering abraded surfaces. Incompatible with liquefied carbolic acid and water. Keep well stoppered, away from flame. Inflammable!

COLLODION, CORN. See Collodion Salicylic Compound.

COLLODION CROTON OIL.

Collodium Tiglii, N. F. 10 percent. croton oil. Counter-irritant.

⊕ COLOCYNTH.

Colocynthis; Colocynth (Bitter Apple) Pulp. Dried pulp of fruit of *Citrullus Colocynthis* (Fam. *Cucurbitaceæ*). Drastic Hydragogue Cathartic; rarely used alone. Average Dose: 1 grain (0.065 Gm.). (See also Extract.)

COLOGNE. See Spirit, Perfumed.

COLTSFOOT.

Farfara, N. F. Dried leaves of *Tussilago Farfara* (Fam. *Compositæ*). Faint odor; mucilaginous, bitter taste. Demulcent Expectorant. Average Dose: 60 grains (4 Gm.).

Columbo. See Calumba.

Compound Alum Powder. See Powder Alum Compound.

CONDURANGO.

Condurango, N. F. Dried bark of *Marsdenia Condurango* (Fam. *Asclepiadaceæ*). Bitter Stomachic, introduced especially for cancer cachexia. Average Dose: 60 grains (4 Gm.). (See also Fluidextract.)

CONFECTION ROSE.

Confectio Rosæ, N. F. Red rose leaves 8 parts, sugar 64 parts, clarified honey 12 parts and stronger rosewater 16 parts. Pill excipient.

Confection Senna, Squibb jar, lb. ; ¼ lb.

This confection enjoys a reputation for therapeutic efficiency of many years' standing, and is reliable as an effective Cathartic, especially in convalescence after child-birth. It contains senna (10 percent.), coriander, cassia fistula, tamarind, prune, and fig, with sugar and some water. Slightly different from N. F. *Confectio Sennæ*. Average Dose: 60 grains (4 Gm.).

CONIUM.

Conium, N. F. Hemlock; Poison Hemlock. Dried, full-grown, unripe fruit of *Conium maculatum* (Fam. *Umbelliferae*). Assays not less than 0.5 percent. coniine. Deteriorates rapidly and is wholly unfit for use after two years. Antispasmodic, Sedative, Antineuralgic. Average Dose: 3 grains (0.2 Gm.). (See also Fluidextract.)

Consumptive's Weed. See Yerba Santa.

CONVALLARIA FLOWERS.

Convallariæ Flores, N. F.; Lily of the Valley Flowers. Dried inflorescence of *Convallaria majalis* (Fam. *Liliaceæ*). Odor agreeable; taste sweetish, then slightly acid. Cardiac Tonic, similar to digitalis. Average Dose: 8 grains (0.5 Gm.).

CONVALLARIA ROOT.

Convallariæ Radix, N. F.; Lily of the Valley Root. Dried rhizome and rootlets of *Convallaria majalis* (Fam. *Liliaceæ*). Heart Tonic, similar to digitalis. Average Dose: 8 grains (0.5 Gm.).

⊕ COPAIBA.

Copaiba; Copaiva; Balsam Copaiba. Oleoresin from South American species of *Copaiba* (Fam. *Leguminosæ*). Pale yellow to brownish-yellow, viscid liquid; peculiar, aromatic odor; bitter, acid taste. Insoluble in water; partly soluble in alcohol; completely soluble in chloroform or ether. Sp. gr. 0.940 to 0.995. Anticatharrhal, Diuretic, Expectorant, mainly in gonorrhea, cystitis, chronic bronchitis, etc. Average Dose: 15 minims (1 mil [Cc.]).

⊕ Copper Sulphate, Squibb

Crystals

bottle, lb. ; ¼ lb.

* Granular

bottle, lb. ; ¼ lb.

Cupri Sulphas; Cupric Sulphate; Blue Vitriol; Blue Stone. $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$. An exceptionally pure product; free from aluminum and heavy metals. Large, deep-blue, odorless, efflorescent crystals, or greenish-blue granular powder, of nauseous, metallic taste. 1 Gm. dissolves in 2.5 mils (Cc) water, 500 alcohol, 2.8 glycerin. Escharotic, Astringent, Emetic, Nervine; externally in eye diseases, hyperidrosis, bleeding, etc.; internally in nervous diseases and to produce vomiting. Average Dose: astringent and nervine, 1/6 grain (0.01 Gm.); emetic, 4 grains (0.25 Gm.). Incompatible with fixed alkalis and alkali carbonates; with iodides, mercury bichloride, sodium borate, lead acetate, silver nitrate, and with tannin-containing infusions, tinctures, etc. Antidotes: milk and sugar, or white of egg freely; pure potassium ferrocyanide, 10 to 15 grains (0.65 to 1 Gm.). (See also Reagents [Part IV]; Tablets [Part II].)

COPTIS.

Coptis, N. F.; Gold Thread. Dried plant of *Coptis trifolia* (Fam. *Ranunculaceæ*). Faint odor; bitter taste. Bitter Stomachic, similar to gentian. Average Dose: 30 grains (2 Gm.).

CORDIAL, GODFREY'S. See Mixture Opium and Sassafras.

CORDIAL, NEUTRALIZING. See Mixture Rhubarb Alkaline.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

CORIANDER.

Coriandrum; Coriander Seed. Dried ripe fruit of *Coriandrum sativum* (Fam. *Umbelliferae*). Aromatic, Carminative, Corrective of action of drastic purgatives. **Average Dose:** 8 grains (0.5 Gm.).

CORN SILK. See Zea.

CORNUS.

Cornus, N. F.; Dogwood Bark. Dried bark of root of *Cornus florida* (Fam. *Cornaceae*); slight odor; bitter, astringent taste. Used as Astringent, Antiperiodic. **Average Dose:** 30 grains (2 Gm.).

CORNUTOL. Brand name for aqueous fluidextract ergot.

CORPUS LUTEUM, DRIED.

From cow's or pig's ovaries. Alterative, in disorders following menopause, obesity with dysmenorrhea, etc. **Dose:** $\frac{1}{2}$ to 1 grain (0.03 to 0.065 Gm.) two or three times daily.

Corrosive Sublimate. See Mercury Chloride, Corrosive.

CORYDALIS.

Corydalis, N. F.; Turkey Corn. Dried tubers of *Bicuculla canadensis* (Fam. *Fumariaceae*). Nearly odorless; slightly bitter. Formerly used as Antiluetic, but now considered useless by scientific practitioners. **Average Dose:** 10 grains (0.65 Gm.).

CORYFIN.

Ethylglycolic Acid Ester of Menthol. Colorless, oily liquid, of faint menthol odor. Soluble in alcohol, ether, chloroform, oils; sparingly soluble in water. Local Anodyne and Anticatharrhal. Applied pure or with olive oil.

COTARNINE HYDROCHLORIDE.

Cotarninae Hydrochloridum; Stypticin. Newly official. $C_{12}H_{14}NO_3Cl$. Salt of base obtained by hydrolyzing narcotine. Yellow, bitter, odorless powder. Very soluble in water, alcohol. Used as Uterine Hemostatic and Sedative, internally; Styptic, externally. **Average Dose:** 1 grain (0.065 Gm.).

COTO. See Paracoto.

COTTON, ABSORBENT.

Gossypium Purificatum; Purified Cotton. Hairs of seed from cultivated varieties of *Gossypium herbaceum* (Fam. *Malvaceae*).

COTTON, STYPTIC.

Gossypium Stypticum, N. F. Absorbent cotton impregnated with dilute solution ferric chloride.

COTTON-ROOT BARK.

Gossypii Cortex, N. F. Dried bark of root of *Gossypium herbaceum* (Fam. *Malvaceæ*) and other species of *Gossypium*. Used as Emmenagogue. **Average Dose:** 30 grains (2 Gm.). (See also Fluidextract.)

COUCH-GRASS. See *Triticum*.**COUMARIN.**

Coumarinum, N. F. Anhydride of ortho-oxycinnamic acid, occurring in tonka, melilot, etc., or prepared synthetically. Colorless crystals; fragrant odor; bitter, aromatic, burning taste. Freely soluble in alcohol, ether, chloroform, oils; sparingly soluble in water. Flavoring.

CRAMP BARK. See *Viburnum Opulus*.**CRANESBILL.** See *Geranium*.**Cream of Tartar.** See *Potassium Bitartrate*.**CREOSOTAL.** Brand of Creosote Carbonate.⊕ **Creosote, Squibb** bottle, $\frac{1}{4}$ lb. ; oz.

Creosotum; Wood-Tar Creosote; Beechwood Creosote. Mixture of phenols and phenol derivatives, chiefly guaiacol and creosol, obtained during distillation of wood-tar; preferably of that derived from beechwood. This official Creosote must not be confounded with the cheaper and dangerous so-called "creosote from coal-tar." The true is a valuable medicinal product; the imitation or coal-tar article is not only without the therapeutic action of the true drug, but liable to produce untoward and dangerous results. The article offered here has been tested with extreme care, and responds satisfactorily to all official requirements. Yellowish, oily liquid, of penetrating, smoky odor, and burning, caustic taste. Sp. gr. not under 1.078. Slightly soluble in water; miscible with alcohol, ether, chloroform and oils, and with up to 3 parts glycerin. Antitubercular, Antizymotic, Antiseptic. Used internally in phthisis, diabetes, intestinal fermentation; externally, in chilblains, burns, etc., like carbolic acid. Incompatible with acacia, ferric and cupric salts, silver salts and oxidizers. **Average Dose:** 4 minims (0.25 Cc.) well diluted, or in tablets or pills. (See also Tablets [Part II].)

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

Creosoté Carbonate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Creosoti Carbonas. Mixture of carbonates of constituents of creosote. Colorless to yellowish, thick, oily liquid; faint odor and taste of creosote. Sp. gr. 1.145 to 1.170. Insoluble in water; freely soluble in alcohol, ether, chloroform, fixed oils. Intestinal Antiseptic, Antitubercular, like creosote. **Average Dose:** 15 grains (1 Gm.), in milk, wine, coffee, etc. Also used by inunction.

⊕ Cresol, Squibb

bottle, lb.

Cresol. Often called Cresylic Acid. Mixture of isomeric cresols, obtained from coal-tar. Yellowish to brownish-yellow liquid, of phenol-like odor and darkening on exposure to light. Sp. gr. 1.030 to 1.038. 1 mil (Cc.) dissolves in about 50 mls water; miscible with alcohol, ether or glycerin. Disinfectant and Antiseptic, like phenol. **Average Dose:** 1 minim (0.06 mil). (See also Solution.)

CROCUS.

Crocus, N. F.; Spanish Saffron. Stigmas of *Crocus sativus* (Fam. *Iridaceæ*). Dark-red; strong aromatic odor; bitterish, aromatic taste. Domestic Diaphoretic and Antispasmodic; used largely as yellow coloring.

Cubeb, Powdered, Squibb

tin, lb. ; ¼ lb.

Cubeba; Cubeb Berries. Dried, unripe but fully grown fruits of *Piper Cubeba* (Fam. *Piperaceæ*). Antiseptic, Diuretic, Stimulating Expectorant; in genito-urinary catarrh, respiratory diseases, etc. **Average Dose:** 15 grains (1 Gm.). (See also Fluidextract; Oleoresin; Troches [Part II].)

Cudbear, Squibb

Ground for Percolation tin, lb.

Coloring matter from various species of lichens. Purplish-red powder. Soluble in alcohol. Used pharmaceutically. (See also Tincture.)

CULVER'S ROOT. See *Leptandra*.

CUSO. See *Brayera*.

CYMARIN.

Neutral substance from *Apocynum cannabinum* and *A. androsæmifolium*. Colorless, bitter prisms. Readily soluble in alcohol or chloroform; slightly in ether or water. Heart Stimulant. **Dose:** 1/200 to 1/100 grain (0.0003 to 0.0006 Gm.); by intravenous or intramuscular injection half as much.

CYPRIPEDIUM.

Cypripedium, N. F.; Ladies' Slipper. Dried rhizome and roots of *Cypripedium hirsutum* or of *C. parviflorum* (Fam. *Orchidaceæ*). Used as Nerve Stimulant and Tonic. (See also Fluidextract.)

DALBY'S CARMINATIVE. See Mixture Carminative.

DAMIANA.

Damiana, N. F. Leaves of *Turnera diffusa* or of *T. aphrodisiaca* (Fam. *Turneraceæ*). Aromatic odor; aromatic, resinous taste. Asserted Aphrodisiac. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

DANDELION. See *Taraxacum*.

DECOCTION SARSAPARILLA COMPOUND.

Decoctum Sarsaparillæ Compositum, N. F. Each 100 mils (Cc.) represents 10 Gm. sarsaparilla and 2 Gm. each sassafras, guaiac wood, glycyrrhiza and mezereum. Antiquated Alterative. Average Dose: 4 fluidounces (120 mils [Cc.]).

DELPHINIUM. See Larkspur Seed.

Deshler's Salve. See Cerate Rosin Compound.

DEWEE'S CARMINATIVE. See Mixture Magnesia and Asafetida.

DEXTRIN, WHITE.

Dextrinum Album, N. F. Mixture of soluble carbohydrates and some unconverted starch, obtained by incomplete hydrolysis of starch by acids. White, amorphous, odorless, sweetish powder. Completely soluble in 3 parts boiling water. Substitute for acacia and other gums.

† Diacetylmorphine, Squibb 1/8-oz. vial,

Diacetylmorphina. $C_{21}H_{23}NO_5$. White, odorless, bitter powder. 1 Gm. dissolves in about 1700 mils (Cc.) water, 31 alcohol, 1.4 chloroform, 100 ether. Similar in action to morphine; considered more toxic than latter, also habit-forming. Average Dose: $\frac{1}{20}$ grain (0.003 Gm.). Antidotes: potassium permanganate solution by mouth, apomorphine hypodermically as emetic; atropine, strychnine or caffeine; hot, strong coffee; flagellation; exercise. (See also Tablets [Part II].)

† ⊕ Diacetylmorphine Hydrochloride, Squibb 1/8-oz. vial,

Diacetylmorphinæ Hydrochloridum. White, odorless, bitter powder. 1 Gm. dissolves in 2 mils (Cc.) water; soluble in alcohol; insoluble in chloroform, ether. Action, Dose, etc., as of preceding. (See also Tablets [Part II].)

DIARRHEA Mixture. See Tincture Opium Compound.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

DIASPIRIN.

Succinyl-disalicylic Acid. White, odorless, almost tasteless powder; 77 percent. salicylic acid. Soluble in alcohol; nearly insoluble in water or ether. Diaphoretic, Antirheumatic. **Dose:** 5 to 15 grains (0.3 to 1 Gm.).

Diastase from Malt, Squibb bottle, $\frac{1}{4}$ lb. ; oz.

Diastaseum; Vegetable Diastase. Starch-digesting principle developed in malt or germinated grain. 1 part converts 50 parts potato starch into sugar in 30 minutes. Creamy-white powder, tasteless, soluble in water, almost insoluble in alcohol. Starch-Digestant. **Average Dose:** 8 grains (0.5 Gm.), two hours after meals.

Diastase from Pancreas, Squibb bottle, oz.

Animal Diastase; Amylopsin. Starch-digesting enzyme of pancreas in most highly purified form. Active in neutral, feebly alkaline and feebly acid solution. 1 part transforms 125 parts potato starch into sugar in 30 minutes. Starch-Digestant. **Dose:** 3 to 5 grains (0.2 to 0.3 Gm.), two hours after meals.

Dichloramine-T, Squibb bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Toluene - para - sulphonichloramine. $\text{CH}_3.\text{C}_6\text{H}_4.\text{SO}_2\text{NCl}_2$. White powder; chlorous odor. Soluble in about 10 parts chloroform, in chlorinated eucalyptol or chloroform; insoluble in water. Introduced by Dr. H. D. Dakin and colleagues as powerful Germicide and Disinfectant for use in oily solution. Applied to wounds in 2 to 5 per cent. solutions, to nose and throat in 1 per cent. strength, and to eyes in 0.5 to 1 per cent. dilution. Solutions are best prepared thus: Warm chloroform, stir in Dichloramine-T until dissolved, filter, if desired (usually not necessary), and cool to suitable temperature for use. While its solutions keep for quite some time they should be discarded if they contain a precipitate that does not disappear on gently warming. (See also Chloramine-T water-soluble), and Halazone Tablets [Part II].).

DIETHYLMALONYLUREA. See Barbital.

DIGIPOTEN.

Mixture of digitalis glucosides in soluble form, diluted with milk sugar and standardized to activity of digitalis leaves. **Dose:** same as latter.

DIGIPURATUM.

Standardized, purified extract digitalis; 1 Gm. represents 1 Gm. digitalis; contains digitoxin and digitalin as tannates. **Dose:** same as of digitalis.

Digitalin, Squibb $\frac{1}{8}$ -oz. vial, ; 15-grain vial,

Digitalin Germanic. Yellowish-white powder. Soluble in water and alcohol; almost insoluble in ether or chloroform. Cardiac Tonic and Diuretic, like digitalis. **Dose:** $\frac{1}{10}$ to $\frac{1}{2}$ grain (0.006 to 0.03 Gm.), in pills or tablets. **Antidotes:** tannic acid, emetics; nitroglycerin or morphine early; strophanthin later; camphor and other stimulants. (See also Tablets [Part II].)

⊕ **Digitalis, Squibb**

* Whole	tin, lb.	; $\frac{1}{4}$ lb.
---------	----------	---------------------

Ground for Percolation		tin, lb.
------------------------	--	----------

Powdered	tin, lb.	; $\frac{1}{4}$ lb.
----------	----------	---------------------

Digitalis; Foxglove. First quality, carefully selected, dried leaves of *Digitalis purpurea* (Fam. *Scrophulariaceæ*). Physiologically assayed according to U. S. P.; minimum lethal dose not more than 0.0006 Gm. per Gm. weight of frog. Also assayed by the "Cat Method" of Hatcher, for those who desire to administer it by Eggleston method. Direct Cardiac Stimulant, Diuretic. Used in cardiac decompensation; most efficient when heart is rapid and very irregular. Useful in edema only when latter arises from impaired circulation. Naturally apt to cause digestive disturbance. **Average Dose:** 1 grain (0.065 Gm.). (See also Extract; Fluidextract; Tincture; Tablets [Part II].)

DIGITOL. Brand of Fat-free Tincture Digitalis.

Dihydroxyphthalophenone. See Phenolphthalein.

DIODOHYDROXYPROPANE. See Iothion.

DIISOBUTYLCRESOL IODIDE. See Euophen.

DIMAZON.

Diacetylaminoozotoluene. Orange-colored powder. Insoluble in water; readily soluble in alcohol, ether, chloroform, oils and fats. Cicatrizant, Antipyric; in burns, chronic ulcers, etc., in 2 percent. ointment or 5 percent. dusting powder.

DIMETHYLAMINOANTIPYRINE. See Pyramidon.

Dimethylxanthine. See Theobromine.

⊖ **DIONIN.** A brand of Ethylmorphine Hydrochloride.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

DIPLOSAL.

Salicylosalicylic Acid; Salicylic Ester of Salicylic Acid. White, nearly odorless, tasteless powder. Soluble in ether, dilute alkali solutions; almost insoluble in water. Antirheumatic, Intestinal Antiseptic. **Dose:** 8 to 15 grains (0.5 to 1 Gm.).

DIURETIN. A brand of Theobromine Sodio-Salicylate.

Dobell's Solution. See Solution Sodium Borate, Compound.

DOG GRASS. See *Triticum*.

DOGWOOD BARK. See *Cornus*.

DONOVAN'S SOLUTION. See Solution Arsenic and Mercury Iodide.

Dover's Powder. See Powder Ipecac and Opium.

Dover's Powder, Liquid. See Tincture Ipecac and Opium.

DROSERA.

Drosera, N. F.; Sundew. Air-dried flowering plant of *Drosera rotundifolia*, *D. intermedia*, or *D. longifolia* (Fam. *Droseraceæ*). Used in respiratory diseases. **Average Dose:** 60 grains (4 Gm.).

DULCAMARA. See Bittersweet.

DUOTAL. A brand of Guaiacol Carbonate.

EASTON'S SYRUP. See Syrup Iron, Quinine and Strychnine Phosphates.

ECHINACEA.

Echinacea, N. F. Dried rhizome and roots of *Brauneria pallida* (*Echinacea angustifolia*; Fam. *Compositæ*). Faint, aromatic odor; sweetish taste. Used as Alterative. **Average Dose:** 15 grains (1 Gm.). (See also Fluidextract.)

Effervescent Granular Salts. See Granular Effervescent Salts.

EHRlich's 606. See Arsphenamine.

Eisenzucker. See Iron Oxide Red, Saccharated.

⊕ ELATERIN.

Elaterium. From elaterium, a substance deposited by juice of fruit of *Ecballium elaterium* (Fam. *Cucurbitaceæ*). White, odorless crystals; bitter, slightly acid taste. 1 Gm. dissolves in 325 mls (Cc.) alcohol, 15.5 chloroform, 450 ether; insoluble in water. Powerful Hydragogue Cathartic; in dropsy, convulsions, eclampsia, etc. **Average Dose:** $\frac{1}{20}$ grain (0.003 Gm.). (See also Tablets [Part II].)

ELDER FLOWERS. See *Sambucus*.

ELECAMPANE. See Inula.

ELIXIR ADJUVANT. See Elixir Glycyrrhiza.

ELIXIR ALMOND COMPOUND.

Elixir Amygdalæ Compositum, N. F. Each 100 mls (Cc.) contains 0.05 mil oil bitter almond, 0.1 Gm. vanillin, 15 mls stronger orange-flower water, with alcohol, syrup and water. Vehicle.

ELIXIR AMMONIUM BROMIDE.

Elixir Ammonii Bromidi, N. F. Each fluidounce contains about 40 grains ammonium bromide. Nerve Sedative, Antispasmodic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

Elixir Ammonium Valerate, Squibb pint, ; gal.

Elixir Ammonii Vateratis, N. F. Each fluidounce contains 16 grains ammonium valerate, in aromatic elixir with tincture vanilla and a little chloroform. Nerve Sedative; chiefly in hysteria and alcoholism. Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELIXIR ANISE.

Elixir Anisi, N. F.; Aniseed Cordial. Mixture of anethol, oil fennel, spirit bitter almond, deodorized alcohol, etc. Carminative, chiefly in children. Average Dose (infant): 15 minims (1 mil [Cc.]).

⊕ Elixir Aromatic, Squibb pint, ; gal.

Elixir Aromaticum; Simple Elixir. Contains 1.2 volume per cent. compound spirit orange. Aromatic Vehicle, Carminative.

ELIXIR AROMATIC RED.

Elixir Aromaticum Rubrum, N. F. Aromatic elixir colored red with cudbear.

ELIXIR BISMUTH.

Elixir Bismuthi, N. F. Each fluidounce contains 16 grains bismuth and sodium tartrate. Stomachic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELIXIR BITTER ORANGE.

Elixir Aurantii Amari, N. F. Replacing Elixir Curassao, N. F. III. Each 100 mls (Cc.) contains 0.4 mil oil bitter orange, 2 mls tincture bitter orange peel, 2 mls stronger orange-flower water, with alcohol, syrup, and water. Vehicle.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

ELIXIR BLACKBERRY COMPOUND.

Elixir Rubi Compositum, N. F. Each fluidounce represents $7\frac{1}{2}$ grains each blackberry root, galls and cinnamon, $1\frac{7}{8}$ grains cloves, and 1 grain each mace and ginger, together with syrup blackberry fruit. Antidiarrheal, Carminative. **Average Dose:** 4 fluidrachms (16 mils [Cc.]).

ELIXIR BLACK HAW. See *Elixir Viburnum Prunifolium*.

ELIXIR BUCHU.

Elixir Buchu, N. F. Each fluidounce represents 57 grains short buchu. Diuretic, Urinary Anticatarrhal. **Average Dose:** 1 fluidrachm (4 mils [Cc.]). Incompatible with spirit nitrous ether or ferrous sulphate.

ELIXIR BUCHU AND POTASSIUM ACETATE.

Elixir Buchu et Potassii Acetatis, N. F. Each fluidounce represents about 60 grains short buchu and 39 grains potassium acetate. Diuretic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]). Incompatible with spirit nitrous ether or ferrous sulphate.

ELIXIR BUCHU COMPOUND.

Elixir Buchu Compositum, N. F. Each fluidounce represents $71\frac{1}{4}$ grains short buchu, and $141\frac{1}{4}$ grains each cubeb, juniper and uva ursi. Diuretic, Urinary Anticatarrhal. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

ELIXIR CALCIUM BROMIDE.

Elixir Calcii Bromidi, N. F. Each fluidounce contains 39 grains calcium bromide. Nerve Sedative. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

ELIXIR CALCIUM HYPOPHOSPHITE.

Elixir Calcii Hypophosphitis, N. F. Each fluidounce contains 16 grains calcium hypophosphite. Used as Reconstructive Tonic. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

ELIXIR CALCIUM LACTOPHOSPHATE.

Elixir Calcii Lactophosphatis, N. F. Each fluidounce contains 12 grains calcium lactophosphate. Used as Reconstructive Tonic, Anticachectic; in scrofula, caries, etc. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

Elixir Calcium and Sodium Glycerophosphates, Squibb
pint, ; gal.

Elixir Calcii et Sodii Glycerophosphatum, N. F.; Each fluidounce contains about 8 grains sodium glycerophosphate and 4 grains calcium glycerophosphate, with glycerin, aromatic elixir and distilled water. Used as Nerve Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Elixir Calisaya. See *Elixir Cinchona*.

Elixir Calisaya and Hypophosphites. See Elixir Cinchona and Hypophosphites.

ELIXIR CALISAYA AND IRON. See Elixir Cinchona and Iron.

ELIXIR CARDAMOM COMPOUND.

Elixir Cardamomi Compositum. Each 100 mils (Cc.) contains 1 mil compound spirit cardamom, with alcohol, syrup and water. Vehicle.

ELIXIR CASCARA SAGRADA.

Elixir Cascaræ Sagradæ, N. F. Equal volumes aromatic fluid-extract cascara and aromatic elixir. Laxative. Average Dose: 1 fluidrachm (4 mils [Cc.]).

ELIXIR CASCARA SAGRADA COMPOUND.

Elixir Cascaræ Sagradæ Compositum, N. F.; Laxative Elixir. Each fluidounce represents 57 grains cascara, 34 grains senna and 30 grains juglans, in aromatic elixir. Laxative. Average Dose: 1 fluidrachm (4 mils [Cc.]).

ELIXIR CATHARTIC COMPOUND.

Elixir Catharticum Compositum, N. F. Each fluidounce represents 57 grains frangula, $45\frac{1}{2}$ grains senna and $28\frac{1}{4}$ grains rhubarb, with spirit peppermint, solution potassa, and elixir aromatic. Aperient, Cathartic. Average Dose: aperient, 1 fluidrachm (4 mils [Cc.]); cathartic, 3 fluidrachms (12 mils).

Elixir Cinchona Alkaloids, Squibb pint, ; gal.

Elixir Cinchonæ Alkaloidorum, N. F.; Elixir Cinchona or Calisaya, from alkaloids. Each fluidounce contains about 1 grain quinine sulphate and $\frac{1}{2}$ grain each cinchonine and cinchonidine sulphates. Bitter Tonic, Antiperiodic. Average Dose: 2 fluidrachms (8 mils [Cc.]).

ELIXIR CINCHONA ALKALOIDS AND HYPOPHOSPHITES.

Elixir Cinchonæ Alkaloidorum et Hypophosphitum, N. F. Each fluidounce contains 8 grains each hypophosphites calcium and sodium, in elixir cinchona. Used as Tonic and Antica-cheetic. Average Dose: 2 fluidrachms (8 mils [Cc.]).

ELIXIR CINCHONA ALKALOIDS AND IRON.

Elixir Cinchonæ Alkaloidorum et Ferri, N. F.; Ferrated Elixir Calisaya. Each fluidounce contains 16 grains iron phosphate, in elixir cinchona alkaloids. Bitter Tonic. Hematinic. Average Dose: 2 fluidrachms (8 mils [Cc.]).

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. When prescribing, please specify SQUIBB'S.

ELIXIR CINCHONA ALKALOIDS, IRON AND BISMUTH.

Elixir Cinchonæ Alkaloidorum, Ferri et Bismuthi, N. F. Each fluidounce contains 14 grains iron phosphate and 8 grains bismuth and sodium tartrate, in elixir cinchona. Bitter Tonic, Stomachic, Hematinic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELIXIR CINCHONA ALKALOIDS, IRON, BISMUTH AND STRYCHNINE.

Elixir Cinchonæ Alkaloidorum, Ferri, Bismuthi et Strychninæ, N. F. Each fluidounce contains 0.08 grain strychnine sulphate, in elixir cinchona, iron and bismuth. Stomachic, Nerve and Blood Tonic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELIXIR CINCHONA ALKALOIDS, IRON AND PEPSIN.

Elixir Cinchonæ Alkaloidorum, Ferri et Pepsini, N. F. Each fluidounce contains $7\frac{1}{2}$ grains pepsin and 12 grains iron phosphate, in elixir cinchona. Tonic, Hematinic, Digestive. Average Dose: 2 fluidrachms (8 mls [Cc.]).

Elixir Cinchona Alkaloids, Iron and Strychnine, Squibb
pint, ; gal.

Elixir Cinchonæ Alkaloidorum, Ferri et Strychninæ N. F. Each fluidounce contains $\frac{2}{25}$ grain strychnine sulphate and 16 grains ferric phosphate, in elixir cinchona. Hematinic, Nervine. Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELIXIR CORRIGENS. See Elixir Eriodictyon Aromatic.**ELIXIR CORYDALIS COMPOUND.**

Elixir Corydalidis Compositum, N. F. Each fluidounce represents $27\frac{1}{2}$ grains each corydalis and stillingia, $13\frac{3}{4}$ grains xanthoxylum, 41 grains iris, and 23 grains potassium iodide, in aromatic elixir. Used as Antiluetic; acc. to Council on P. & C., of A. M. A., useless and therefore harmful. Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELIXIR CRAMP BARK COMPOUND. See Elixir Viburnum Opulus Compound.**Elixir Digestive Compound, Squibb** pint, ; gal.

Elixir Digestivum Compositum, N. F. III; Compound Elixir Pepsin. Each fluidounce contains 4.6 grains pepsin, $\frac{1}{2}$ grain each pancreatin and diastase, $\frac{1}{4}$ grain lactic acid and $\frac{1}{2}$ minim hydrochloric acid, with glycerin and aromatic elixir. Average Dose: 2 fluidrachms (8 mls [Cc.]). (NOTE. According to Council on P. & C., of A. M. A., "pepsin and pancreatin in solution are incompatible with one another. If the solution be neutral or alkaline, the pancreatin gradually destroys the pepsin, and if acid the pepsin destroys the pancreatin." We offer this Elixir in response to the demands made on us.)

ELIXIR ERIODICTYON AROMATIC.

Elixir Eriodictyi Aromaticum, N. F.; Aromatic Elixir Yerba Santa; Elixir Corrigen. Mixture of fluidextract yerba santa, syrup, and compound elixir taraxacum. Each fluidounce represents 27½ grains eriodictyon and 211 minims elixir taraxacum compound. Pectoral and Alterative, but used chiefly as vehicle for quinine and other bitter medicaments. Average Dose: 1 fluidrachm (4 mils [Cc.]).

ELIXIR FORMATES.

Elixir Formatum, N. F. Each fluidounce contains about 23 grains potassium formate, 18 sodium formate, in aromatic elixir. Intended as Tonic. **Average Dose:** 2 fluidrachms (8 mls [Cc.]).

ELIXIR FORMATES COMPOUND.

Elixir Formatum Compositum, N. F. Each fluidounce contains about $11\frac{1}{2}$ grains sodium formate, $10\frac{1}{3}$ magnesium formate, $13\frac{7}{8}$ strontium formate, $5\frac{1}{6}$ lithium formate, 4 quinine formate. Asserted Tonic. Average Dose: 2 fluidrachms (8 mls [Cc.]).

Elixir Gentian, Squibb pint, ; gal.

Elixir Gentianæ, N. F. III. Not present N. F. product; of same drug strength, but considered superior because thoroughly *detannated*. Each fluidounce represents about 16 grains gentian, with compound spirit cardamom and aromatic elixir. **Bitter Tonic. Average Dose:** 1 fluidrachm (4 mils [Cc.]).

ELIXIR GENTIAN FERRATED. See Elixir Gentian and Iron Phosphate.

Elixir Gentian Glycerinated, Squibb pint, ; gal.

Elixir Gentianæ Glycerinatum, N. F. Each fluidounce represents about $4\frac{1}{2}$ grains gentian and 192 minims glycerin, with sugar, white wine and small quantities of fluidextract taraxacum, acetic ether, tincture sweet orange peel and compound tincture cardamom. Bitter Tonic. Average Dose: 2 fluidrachms (8 mls [Cc.]).

Elixir Gentian and Iron, Squibb pint; ; gal.

Elixir Gentianæ et Ferri, N. F.; Elixir Gentian with Tincture Iron Chloride; Elixir Gentian with Tincture Ferric Citrochloride. Each fluidounce represents about $14\frac{1}{2}$ grains gentian and 6 grains iron chloride. Bitter Hematinic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

ELIXIR GENTIAN AND IRON PHOSPHATE.

Elixir Gentianæ et Ferri Phosphatis, N. F.; Elixir Gentian Ferrated. Each fluidounce represents $16\frac{1}{2}$ grains gentian and 8 grains iron phosphate. Bitter Tonic, Hematopoietic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Elixir Glycerophosphates. See Elixir Calcium and Sodium Glycerophosphates.

Elixir Glycerophosphates Compound, Squibb

pint, ; gal.

Elixir Glycerophosphatum Compositum, N. F. Each fluidounce contains about 7.3 grains calcium glycerophosphate, 13.5 grains sodium glycerophosphate, 0.9 grain manganese glycerophosphate, 0.45 grain quinine glycerophosphate and 1.35 grains iron glycerophosphate, with compound spirit cardamom, alcohol, glycerin and water. Used as Nerve Tonic and Hematinic. **Average Dose:** 2 fluidrachms (8 mils [Cc.]), before meals. Keep in cool place.

ELIXIR GLYCYRRHIZA.

Elixir Glycyrrhizæ; Elixir Licorice. Replacing Elixir Adjuvant U. S. P. VIII Rev. Each fluidounce represents 60 minims fluidextract licorice, with aromatic elixir. Vehicle for bitter and nauseous remedies. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

ELIXIR GLYCYRRHIZA AQUEOUS.

Elixir Glycyrrhizæ Aquosum, N. F.; Aqueous Elixir Licorice. Each fluidounce contains 72 minims fluidextract licorice, $2\frac{1}{2}$ compound spirit cardamom, 96 stronger orange-flower water, with glycerin, syrup, water. Lenitive and Pectoral, but used chiefly as vehicle for bitter remedies. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

ELIXIR LICORICE. See Elixir Glycyrrhiza.

ELIXIR GLYCYRRHIZA AROMATIC.

Elixir Glycyrrhizæ Aromaticum, N. F.; Aromatic Elixir Licorice. Each fluidounce represents 60 minims fluidextract licorice, with oils of cloves, cinnamon, nutmeg and fennel, and aromatic elixir. Vehicle. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

ELIXIR GUARANA.

Elixir Guaranae, N. F. Each fluidounce represents about $91\frac{1}{4}$ grains guarana, with aromatic elixir and compound elixir taraxacum. Sedative. Antineuralgic; mainly in nervous headache. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

ELIXIR HOPS.

Elixir Humuli, N. F. Each fluidounce represents 57 grains hops, with tincture vanilla, compound elixir taraxacum and aromatic elixir. Bitter Stomachic, Sedative. Average Dose: 2 fluidrachms (8 mils [Cc.]).

ELIXIR HYPOPHOSPHITES.

Elixir Hypophosphitum, N. F. Each fluidounce contains 24 grains calcium hypophosphite, and 8 grains each sodium and potassium hypophosphites, with hypophosphorous acid, glycerin, compound spirit cardamom and aromatic elixir. Used as Reconstructive Tonic. **Average Dose:** 2 fluidrachms (8 mls [Cc.]).

ELIXIR HYPOPHOSPHITES WITH IRON.

Elixir Hypophosphitum et Ferri, N. F. Each fluidounce contains about 4 grains each iron and potassium hypophosphites, and 8 grains each calcium and sodium hypophosphites. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

ELIXIR IRON HYPOPHOSPHITE.

Elixir Ferri Hypophosphitis, N. F. Each fluidounce contains 8 grains iron hypophosphite, in aromatic elixir. Hematinic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELIXIR IRON LACTATE.

Elixir Ferri Lactatis, N. F. Each fluidounce contains 8 grains ferrous lactate, in aromatic elixir, with 24 grains potassium citrate. Hematinic. Average Dose: 1 fluidrachm (4 mils [Cc.])

Elixir Iron Phosphate, Squibb pint, ; gal.

Elixir Ferri Phosphatis, N. F. Each fluidounce contains 16 grains ferric phosphate, in aromatic elixir. Hematinic.
Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELIXIR IRON PYROPHOSPHATE.

Elixir Ferri Pyrophosphatis, N. F. Each fluidounce contains 16 grains ferric phosphate, in aromatic elixir. Hematinic.
Average Dose: 1 fluidrachm (4 mils [Cc.]).

ELIXIR IRON PYROPHOSPHATE, QUININE AND STRYCHNINE.

Elixir Ferri Phosphatis, Quininae et Strychninae, N. F.
Each fluidounce contains about 16¼ grains ferric pyrophosphate, 4 quinine sulphate, 1/16 strychnine. Hematinic, General Tonic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Elixir Iron, Quinine and Strychnine, Squibb

pint, ; gal.

Elixir Ferri, Quininae et Strychninae, N. F. Each fluidounce represents about 8 grains ferric chloride, 4 grains quinine hydrochloride, and 0.08 grain strychnine sulphate. General Tonic, in debility, convalescence, etc. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Elixir Iron, Quinine and Strychnine Phosphates, Squibb

pint, ; gal.

Essentially *Elixir Ferri, Quininae et Strychninae Phosphatum*, U. S. P. VIIIth Rev., but by a laboratory improvement made of a nice green color instead of brownish-green. Each fluidounce represents about 8 grains iron phosphate, 4 grains quinine and $\frac{1}{8}$ grain strychnine. Hematinic and Nervine. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

ELIXIR LAXATIVE. See Elixir Cascara Sagrada Compound.

ELIXIR LITHIUM BROMIDE.

Elixir Lithii Bromidi, N. F. Each fluidounce contains about 39 grains lithium bromide. Nerve Sedative. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

ELIXIR LITHIUM CITRATE.

Elixir Lithii Citratis, N. F. Each fluidounce contains about 39 grains lithium citrate, in aromatic elixir. Systemic Alkali, Diuretic; chiefly in gout and rheumatism. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

ELIXIR LITHIUM SALICYLATE.

Elixir Lithii Salicylatis, N. F. Each fluidounce contains about 39 grains lithium salicylate, in aromatic elixir. Antirheumatic. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

Elixir Pepsin, Squibb

pint, ; gal.

Elixir Pepsini, N. F. Each fluidounce contains about $7\frac{3}{4}$ grains pepsin, with hydrochloric acid, glycerin, aromatic elixir, etc. Digestive. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

Elixir Pepsin and Bismuth, Squibb

pint, ; gal.

Elixir Pepsini et Bismuthi, N. F. Each fluidounce contains 4 grains pepsin and 16 grains bismuth and sodium tartrate, with glycerin, alcohol, syrup and aromatic elixir. Gastric Sedative, Digestive. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

Elixir Pepsin, Bismuth and Strychnine, Squibb

pint, ; gal.

Elixir Pepsini, Bismuthi et Strychninae, N. F. Each fluidounce contains 4 grains pepsin, 16 grains bismuth and sodium tartrate, and 0.08 grain strychnine. Digestive Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

ELIXIR PEPSIN AND IRON.

Elixir Pepsini et Ferri, N. F. Each fluidounce represents 4 grains ferric chloride and 8 grains pepsin. Digestive, Hematinic. Average Dose: 2 fluidrachms (8 mls [Cc.]).

Elixir Pepsin and Rennin Compound. See Essence Pepsin.

Elixir Pepsin Compound. See Elixir Digestive Compound.

ELIXIR PHOSPHORUS.

Elixir Phosphori, N. F. Each fluidounce contains about $\frac{1}{9}$ grain phosphorus. Deteriorates rapidly. Bone reconstructive in rickets. Average Dose: 1 fluidrachm (4 mls [Cc.]). Antidotes: potassium permanganate; charcoal or lime water; then emetics.

ELIXIR PHOSPHORUS AND NUX VOMICA.

Elixir Phosphori et Nucis Vomicae, N. F. Each fluidounce represents 16 minims tincture nux vomica and $\frac{1}{9}$ grain phosphorus. Deteriorates rapidly. Used as Nerve Tonic and Aphrodisiac. Average Dose: 1 fluidrachm (4 mls [Cc.]). Antidotes: emetics; potassium permanganate; charcoal; lime-water.

ELIXIR POTASSIUM ACETATE.

Elixir Potassii Acetatis, N. F. Each fluidounce contains about 39 grains potassium acetate, with aromatic elixir. Diuretic, Antacid; in dropsy, cystitis, rheumatic diathesis, etc. Average Dose: 4 fluidrachms (16 mls [Cc.]).

ELIXIR POTASSIUM ACETATE AND JUNIPER.

Elixir Potassii Acetatis et Juniperi, N. F. Each fluidounce contains about 39 grains potassium acetate and 57 grains juniper, in aromatic elixir. Diuretic, Urinary Anticatatarrhal. Average Dose: 4 fluidrachms (16 mls [Cc.]).

ELIXIR POTASSIUM BROMIDE.

Elixir Potassii Bromidi, N. F. Each fluidounce contains 80 grains potassium bromide. Nerve Sedative, Antispasmodic. Average Dose: 2 fluidrachms (8 mls [Cc.]). Incompatible with alkaloidal salts.

ELIXIR QUININE VALERATE AND STRYCHNINE.

Elixir Quininae Valeratis et Strychninae, N. F. Each fluidounce contains 8 grains quinine valerate and 0.08 grain strychnine sulphate, in aromatic elixir. Used as Nerve Tonic; in hysteria, nervousness, etc. Average Dose: 1 fluidrachm (4 mls [Cc.]).

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

Elixir, Simple. See Elixir Aromatic.

Elixir Sodium Bromide, Squibb pint, ; gal.

Elixir Sodii Bromidi, N. F. Each fluidounce contains 80 grains sodium bromide. Nerve Sedative, Antispasmodic. **Average Dose:** 2 fluidrachms (8 mls [Cc.]). Incompatible with alkaloidal salts.

ELIXIR SODIUM HYPOPHOSPHITE.

Elixir Sodii Hypophosphitis, N. F. Each fluidounce contains 16 grains sodium hypophosphite, in aromatic elixir. Used as Tonic. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

ELIXIR SODIUM SALICYLATE.

Elixir Sodii Salicylatis, N. F. Each fluidounce contains 40 grains sodium salicylate. Antirheumatic, Analgesic. **Average Dose:** 1 fluidrachm (4 mls [Cc.]). Incompatible with ferric salts, solutions quinine salts and spirit nitrous ether.

ELIXIR SODIUM SALICYLATE COMPOUND.

Elixir Sodii Salicylatis Compositum, N. F. Each fluidounce contains about 36 grains sodium salicylate, 15 minims fluidextract condurango, $7\frac{1}{2}$ minims fluidextract gelsemium, 6.8 grains potassium iodide; with aromatic elixir. Antirheumatic. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

ELIXIR STRYCHNINE^{*} VALERATE.

Elixir Strychninæ Valeratis, N. F. Each fluidounce contains 0.08 grain strychnine valerate, with tincture vanilla and aromatic elixir. Nervine. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Elixir Taraxacum Compound, Squibb pint, ; gal.

Elixir Taraxaci Compositum, N. F. Containing fluidextracts taraxacum, wild cherry, sweet orange peel and licorice, tincture cinnamon, compound tincture cardamom, and aromatic elixir. Each fluidounce represents 16 grains taraxacum, 9 grains wild cherry and $27\frac{1}{2}$ grains licorice. Vehicle for bitter, saline or acrid substances. **Average Dose:** 2 fluidrachms (8 mls [Cc.]).

Elixir Terpin Hydrate, Squibb pint, ; gal.

Elixir Terpini Hydratis, N. F. Each fluidounce contains 8 grains terpin hydrate, with tincture sweet orange peel, spirit bitter almond, alcohol, glycerin, syrup and water. Stimulating Expectorant, Anticatatrrhal; chiefly in chronic affections of respiratory tract. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Elixir Terpin Hydrate, Squibb pint, ; gal.

Elixir Terpini Hydratis et Codeinæ, N. F. Each fluidounce contains 8 grains terpin hydrate and 1 grain codeine, with tincture sweet orange peel, spirit bitter almond, alcohol, glycerin, syrup and water. Stimulating Expectorant, Cough Sedative; chiefly in chronic pectoral affections. Average Dose: 1 fluidrachm (4 mils [Cc.]).

Elixir Terpin Hydrate and Diacetylmorphine, Squibb

pint, ; gal.

Elixir Terpini Hydratis et Diacetylmorphinæ, N. F. Each fluidounce contains 8 grains terpin hydrate and $\frac{1}{8}$ grain diacetylmorphine hydrochloride, with tincture sweet orange peel, spirit bitter almond, alcohol, glycerin, syrup and water. Stimulating Expectorant, Cough Sedative; chiefly in chronic pectoral affections. Average Dose: 1 fluidrachm (4 mils [Cc.]).

ELIXIR THREE BROMIDES.

Elixir Trium Bromidorum, N. F. Each fluidounce contains about 36 grains each ammonium, potassium and sodium bromides, in compound elixir almond colored red. Nerve Sedative. Average Dose: 1 fluidrachm (4 mils [Cc.]).

ELIXIR VANILLIN COMPOUND.

Elixir Vanillini Compositum, N. F. Flavoring vehicle containing 2 vol. percent. compound spirit vanillin, with little glycerin, syrup and water.

ELIXIR VIBURNUM OPULUS, COMPOUND.

Elixir Viburni Opuli Compositum, N. F.; Compound Elixir Cramp Bark. Each fluidounce represents 34 grains cramp bark, $68\frac{1}{2}$ grains beth root and $34\frac{1}{4}$ grains aletris, with compound elixir taraxacum. Used as Uterine Tonic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

ELIXIR VIBURNUM PRUNIFOLIUM.

Elixir Viburni Prunifolii, N. F.; Elixir Black Haw. Each fluidounce represents 57 grains viburnum prunifolium, with aromatic elixir and compound tincture cardamom. Used as Uterine Sedative and Antispasmodic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

Elixir Vitriol. See Acid Sulphuric Aromatic.

ELIXIR YERBA SANTA AROMATIC. See Elixir Eriodictyon Aromatic.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

ELIXIR ZINC VALERATE.

Elixir Zinci Valeratis, N. F. Each fluidounce contains 8 grains zinc valerate, with ammonium citrate, spirit bitter almond and aromatic elixir. Used as Nerve Sedative. Average Dose: 1 fluidrachm (4 mls [Cc.]).

ELM.

Ulmus; Slippery Elm. Bark of *Ulmus fulva* (Fam. *Ulmaceæ*), deprived of outer corky layer and dried. Demulcent. (See also Troches.)

⊕ EMETINE HYDROCHLORIDE.

Emetinae Hydrochloridum, $C_{30}H_{44}N_2O_4 \cdot 2HCl + 2H_2O$. Salt of an ipecac alkaloid. White to yellowish, odorless, bitter powder; darkens in light. Freely soluble in water, alcohol. Expectorant, Antamebic, Hemostatic; in bronchitis, amebic dysentery and pyorrhea alveolaris, hemoptysis, etc. Average Dose: Antamebic, $\frac{1}{3}$ grain (0.02 Gm.) hypodermically thrice daily for a week, then discontinued for a few days and resumed if necessary (injected into gums in 1 percent. solution); expectorant $\frac{1}{12}$ to $\frac{1}{6}$ grain (0.005 to 0.01 Gm.); hemostatic $\frac{1}{2}$ to $\frac{2}{3}$ grain (0.03 to 0.04 Gm.) subcutaneously.

EMPYROFORM.

Condensation product of birch tar and formaldehyde. Dark grayish-brown, nearly inodorous powder. Soluble in acetone or chloroform; insoluble in water, alcohol or ether. Antipruritic and Antiparasitic Dermic, in 5 percent. ointments, 10 to 20 percent. pastes or paints.

Emulsions.

No matter how well made, emulsions will not keep; hence, we do not carry them in stock, but we are prepared to supply them on special orders in quantities of 1 gallon or more.

EMULSION ALMOND.

Emulsum Amygdalæ; Milk of Almond. 6 percent. sweet almonds, with sugar, acacia and water. Demulcent, Vehicle.

EMULSION ASAFETIDA.

Emulsum Asafætidaæ; Milk of Asafætida. 4 percent. asafætida, with water. Sedative, Carminative; in hysteria, asthma, convulsions, etc. Average Dose: 4 fluidrachms (16 mls).

EMULSION CASTOR OIL.

Emulsum Olei Ricini, N. F. 35 percent. by volume castor oil, with tincture vanilla, syrup and water. Cathartic. Average Dose: $1\frac{1}{2}$ fluidounces (48 mls [Cc.]).

EMULSION COD-LIVER OIL.

Emulsum Olei Morrhuaæ. 50 volume percent. of oil, and holding flavor which efficiently masks the taste. Alterative Tonic, Nutrient. Average Dose: 2 fluidrachms (8 mls [Cc.]).

EMULSION COD-LIVER OIL WITH CALCIUM LACTOPHOSPHATE.

Emulsum Olei Morrhuae cum Calcii Lactophosphate, N. F. 50 volume percent. cod liver oil, with calcium lactophosphate (23 grains per fluidounce), syrup tolu and flavoring. Alterative, Reconstructive, Nutrient. **Average Dose:** 4 fluidrachms (16 mils [Cc.]).

EMULSION COD-LIVER OIL WITH CALCIUM PHOSPHATE.

Emulsum Olei Morrhuae cum Calcii Lactophosphate, N. F. 50 volume percent. cod-liver oil, with calcium phosphate (16 grains per fluidounce), syrup tolu and flavoring. Alterative, Nutrient, Reconstructive. **Average Dose:** 4 fluidrachms (16 mils [Cc.]).

EMULSION COD LIVER OIL WITH EGG.

Emulsum Olei Morrhuae cum Vitello, N. F. 50 vol. percent. oil, $17\frac{1}{2}$ glycerite yolk of egg, 10 syrup tolu. **Average Dose:** 4 fluidrachms (16 mils [Cc.]).

EMULSION COD-LIVER OIL WITH EXTRACT MALT.

Emulsum Olei Morrhuae cum Malto, N. F. Each fluidounce contains 144 minims cod-liver oil and 260 minims extract malt. Nutritive, Tonic. **Average Dose:** 4 fluidrachms 16 mils [Cc.]

EMULSION COD-LIVER OIL WITH HYPOPHOSPHITES.

Emulsum Olei Morrhuae cum Hypophosphitibus, N. F. Each fluidounce contains 240 minims cod-liver oil, 4.6 grains calcium hypophosphite, 2.3 grains each potassium and sodium hypophosphites. Used as Reconstructive Tonic, Nutrient. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

EMULSION COD-LIVER OIL WITH WILD CHERRY.

Emulsum Olei Morrhuae cum Pruno Virginiana, N. F. 50 volume percent. cod-liver oil and 30 grains wild cherry per fluidounce, with syrup tolu and flavoring. Alterative Tonic, chiefly in chronic respiratory affections. **Average Dose:** 4 fluidrachms (16 mils [Cc.]).

EMULSION OIL TURPENTINE.

Emulsum Olei Terebinthinae. Each fluidounce contains 72 minims rectified oil turpentine and 24 minims expressed oil almond. Anthelmintic, Diuretic, Antiseptic. **Average Dose:** 30 minims (2 mils [Cc.]); as anthelmintic, $\frac{1}{2}$ to 1 fluidounce (15 to 30 mils).

EMULSION PETROLATUM.

Emulsum Petrolati, N. F. Each fluidounce contains about 103 grains petrolatum, 108 minims expressed oil almond; with syrup, tincture lemon peel, and water. Protective, Lubricant, Laxative. **Average Dose:** 4 fluidrachms (16 mils [Cc.]), between meals.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

⊕ EPINEPHRINE.

Active principle of suprarenal gland. Small, white crystals, sparingly soluble in water and prone to oxidize, hence supplied only in 1:1000 solution of its hydrochloride in normal salt solution and generally containing a preservative. Vaso-constrictor, Hemostatic; Tonic to heart muscle. **Dose:** 5 to 30 minims (0.3 to 2 mils [Cc.]) of the 1:1000 solution; hypodermically, 1 to 15 minims (0.06 to 1 mil) diluted with sterile water. Applied in 1:1000 to 1:10000 solution.

Epsom Salt, Pure. See Magnesium Sulphate.

⊕ ERGOT.

Ergota; Spurred Rye. Carefully dried sclerotium of *Claviceps purpurea* (Fam. *Hypocreaceæ*), replacing the grain of rye, *Secale cereale* (Fam. *Gramineæ*). All the well-known ergot products offered by this firm are made from yearly importations of new-crop *Spanish* ergot, which is immediately extracted and made up into the various preparations before deterioration of the active principles takes place. (For full descriptions of the various preparations, see the respective headings in this list.) Emmenagogue, Hemostatic, Circulatory Equalizer. **Average Dose:** 30 grains (2 Gm.) (See Extract; Fluidextract; Sterile Ergot; Tablets [Part II].)

Ergot, Sterile, for Hypodermic Use. See Sterile Ergot.

ERGOTIN BONJEAN.

Purified Extract Ergot, analogous to the Squibb extract ergot.

ERICIN. See Mesotan.

Eriodictyon (Yerba Santa), Squibb

Ground for Percolation

tin, lb.

Eriodictyon; Mountain Balm; Consumptive's Weed. Dried leaves of *Eriodictyon californicum* (Fam. *Hydrophyllaceæ*). Expectorant, but used chiefly as taste corrigent. **Average Dose:** 15 grains (1 Gm.). (See also Fluid; Fluidextract; Syrup.)

ERYTHROXYLON. See Coca.

Eserine. See Physostigmine.

Essence Peppermint. See Spirit Peppermint

Essence Pepsin, Squibb

bottle, pint, gal.

Of same drug strength as *Elixir Pepsini et Rennini Compositum* N. F., but differs in flavoring and vehicle and the lactic acid has been omitted because it is apt to interfere with action of the pepsin. Each fluidounce contains 10¼ grains pepsin, 7½ grains rennin. Digestive; Vehicle for iodides and bromides. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

⊕ **Ether, Squibb** (specially made for Anæsthesia).special tins, $\frac{1}{4}$ lb.

Squibb's Ether is furnished in tin cans of all the current sizes of the trade, but the smaller packages, such as the $\frac{1}{4}$ lb. are especially recommended. One such can contains a quantity sufficient for an ordinary surgical operation; and in opening an original package for each operation, the surgeon is absolutely sure of a fresh and otherwise correct supply. It is a deplorable fact that in some instances our cans have been refilled with inferior ether. Surgeons will therefore see that the sealing cap is still intact.

Æther; Sulphuric Ether; Ethylic Ether; Ethyl Oxide ($C_2H_5)_2O$. The high-quality Anæsthetic Ether here listed is made in the Squibb laboratories by the original process devised by Dr. E. R. Squibb in 1853, and by continuous improvement long ago brought to practical perfection, thus insuring a product of uniform purity, strength and efficiency. From the beginning to the present day all Squibb Ether has been made only in the Squibb laboratories. We make no ether for technical uses. This is in order to safeguard both surgeon and patient. The Squibb Ether is superior in vital respects to U. S. P. Ether, and by both laboratory tests and clinical experiences extending over more than sixty years, it has been proved to be the purest, best, safest and most economical anæsthetic ether made. Squibb's Ether is put up only in soldered tins with soft metal caps, which can be readily cut out with a pocket knife and the tin then stoppered with a cork. These soldered cans are all carefully tested for leakage before they are sent out. Sometimes, however, a weak spot is not evident on testing, but yields to rough handling during transportation, and the can will leak and be found short or even empty when received. In any such case we gladly furnish the purchaser with a new package if he will send the defective one to us. Soluble in about 10 times its volume water; miscible in all proportions with alcohol, chloroform, oils, petroleum benzin and benzene. Inhalation Anæsthetic, Anodyne, Stimulant, Antispasmodic; also Reagent. **Average Dose** per os: 15 minims (1 mil [Cc.]). **Antidotes:** *artificial respiration*; inversion of patient; ammonia; oxygen or fresh air. Ether is highly inflammable. Its vapor, when mixed with air and ignited, explodes violently. It should be kept in a cool place, and remote from lights and fire, and administered only by daylight or in electric light. (See also Inhaler; Spirit Ether Compound.)

Ether Anhydrous, Reagent. See Reagents (Part IV).

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

Ether, Acetic, Squibb

bottle, lb.

Æther Aceticus, N. F.; Ethyl Acetate. $C_2H_5C_2H_3O_2$. Dropped from U. S. P. An exceptionally pure product prepared in special apparatus, from high-grade material. Colorless liquid; fragrant odor; acetous, burning taste. Sp. gr. 0.887 to 0.895. 1 Gm. dissolves in about 10 mils (Cc.) water; miscible with alcohol, ether, oils. Stimulant, Antispasmodic, Anodyne; in nervous affections, fainting, etc. Also Reagent. Average Dose: 15 minims (1 mil).

Ether, Hydrobromic. See Ethyl Bromide.

Ether, Sulphuric. See Ether.

Ether Inhaler. See Inhaler.

Ethyl Acetate. See Ether Acetic.

Ethyl Bromide, Squibb

ampul, oz. ; ¼ oz.

Monobromethane; Hydrobromic Ether. C_2H_5Br . Great care is exercised to insure a product of correct specific gravity and high purity, factors upon which the successful and safe use of this article depends. Colorless, inflammable, volatile liquid, of burning taste and chloroform-like odor. Sp. gr. 1.433 to 1.457. Soluble in alcohol, chloroform or ether. Inhalation Anæsthetic, Nerve Sedative; used mainly in minor surgery. Dose: by inhalation, 150 to 300 minims (10 to 20 mils [Cc.]); internally, 5 to 10 drops, on sugar or in capsules. On exposure to light it is likely to become discolored from liberation of bromine. Keep from light, air and fire. Must not be confounded with poisonous *Ethylene Bromide*. (See also Inhaler.)

ETHYL CARBAMATE.

Æthylis Carbamas; Urethane; Ethyl Urethane. $C_3H_7NO_2$. Ethyl ester of carbamic acid. Colorless, odorless crystals; cooling saline taste. 1 Gm. dissolves in 0.45 mil (Cc.) water, 0.8 alcohol, 2.5 glycerin, 0.9 chloroform, 1.5 ether, 32 olive oil. Mild and relatively harmless Hypnotic. Average Dose: 15 grains (1 Gm.). Incompatible in triturations with antipyrine, butylchloral hydrate, camphor, carbolic acid, menthol, naphthol, resorcin, salol or thymol; with acids or alkalies.

⊕ **Ethyl Chloride, Squibb**

30 Cc. glass tubes with fine capillary delivery tube having automatic closing cap, for local anæsthesia, each

50 Cc. glass graduated tubes, with coarse capillary delivery tube having automatic closing cap, for general anæsthesia, each

60 Cc. glass tubes with fine capillary delivery tube having automatic closing cap, for local anæsthesia, each

Æthylis Chloridum; Monochlorethane. C_2H_5Cl . Squibb's Ethyl Chloride is a true, pure Ethyl Chloride, eminently suited for General as well as Local Anæsthesia. Prepared and purified in the Squibb Laboratories. Colorless, volatile, inflammable liquid, of agreeable odor and burning taste. Sp. gr. about 0.921 at 0°C.; boiling-point 12° to 13°C. Soluble readily in alcohol or ether; slightly in water. Dose (by inhalation as general anæsthetic): 1 to 3 fluidrachms (4 to 12 mils [Cc.]). Keep from light and fire. Inflammable!

Ethyl Chloride Inhaler. See Inhaler.

†⊕ **ETHYLMORPHINE HYDROCHLORIDE.**

Æthylmorphinæ Hydrochloridum; Dionin. $C_{19}H_{32}O_3NHCl$ $2H_2O$. From morphine by ethylation. White or yellowish-white, odorless, bitter powder. 1 Gm. dissolves in 8 mils (Cc.) water, 22 alcohol; slightly soluble in ether, chloroform. Ocular Lymphagogue; Analgesic, intermediate between morphine and codeine. Average Dose: $\frac{1}{4}$ grain (0.015 Gm.)

Ethyl Oxide. See Ether.

EUCAINE. See Betaeucaine Hydrochloride.

⊕ **Eucalyptol, Squibb** bottle, lb. $\frac{1}{4}$ lb. ; oz.

Eucalyptol; Cineol; Cajuputol. $C_{10}H_{18}O$. From volatile oil eucalyptus and other sources. Colorless liquid, of aromatic, camphoraceous odor, and pungent, spicy, cooling taste. Sp. gr. 0.921 to 0.923. Miscible with alcohol, ether, chloroform and fatty oils; almost insoluble in water. Local Stimulant, Antiseptic, Deodorant; by inhalation, in diphtheria, asthma, etc. Average Dose: 5 minims (0.3 mil [Cc.]), in emulsion or capsules or on sugar.

⊕ **EUCALYPTUS.**

Eucalyptus; Blue Gum Tree. Dried leaves of *Eucalyptus Globulus* (Fam. *Myrtaceæ*). Antiperiodic, Tonic. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

Eugenol, Squibb bottle, oz.

Eugenol; Eugenol or Caryophyllol. $C_{10}H_{12}O_2$. An unsaturated aromatic phenol obtained from clove oil, and other sources. Colorless or pale-yellow liquid, of strong clove odor, and pungent, spicy taste, and becoming darker and thicker on exposure. Sp. gr. 1.064 to 1.070. Miscible with alcohol, chloroform, ether or fixed oils. Antiseptic, Antitubercular, Local Anæsthetic (in dentistry). Average Dose: 3 minims (0.2 mil [Cc.]).

EUMYDRIN.

Methylatropine Nitrate. White, odorless, permanent crystals. Soluble in water or alcohol, sparingly in ether or chloroform. Mydriatic, Antihydrotic, Antispasmodic. Applied in $\frac{1}{2}$ to 1 percent solution. Dose: $\frac{1}{60}$ to $\frac{1}{30}$ grain (0.001 to 0.002 Gm.).

EUONYMUS.

Euonymus, N. F.; Wahoo; Spindle Tree. Dried bark of root of *Euonymus atropurpureus* (Fam. *Celastraceæ*). Laxative; uncertain as to absorption. Average Dose: 8 grains (0.5 Gm.).

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

EUPATORIUM.

Eupatorium, N. F.; Boneset; Thoroughwort. Dried leaves and flowering tops of *Eupatorium perfoliatum* (Fam. *Compositæ*). Domestic Diaphoretic tea. **Average Dose:** 30 grains (2 Gm.).

EUPHORBIA PILULIFERA.

Euphorbia Pilulifera, N. F.; Pill-bearing Spurge. Dried herb of *Euphorbia pilulifera* (Fam. *Euphorbiaceæ*), collected while flowering and fruiting. Aromatic odor; faintly bitter, aromatic, acid taste. Used mainly in asthma and chronic bronchitis. **Average Dose:** 30 grains (2 Gm.).

EUPHTHALMIN.

$C_{17}H_{25}NO_3.HCl$. Mandelic acid derivative of eucaine. White powder. Soluble readily in water or alcohol. Mydriatic, in 5 to 10 percent. solutions.

EUQUININE.

Quinine Ethylcarbonate. $C_{23}H_{28}N_2O_4$. White, light, fleecy, acicular conglomerations, practically tasteless. Soluble readily in alcohol, ether, chloroform; sparingly in water. Solutions are bitter. Succedaneum for quinine sulphate. **Dose:** 2 to 15 grains (0.13 to 1 Gm.).

EUROPHEN.

Diisobutylcresol Iodide. $C_{22}H_{29}O_2I$. Bulky, yellow powder, of saffron odor; 28 percent. iodine. Soluble in alcohol, ether, chloroform, fixed oils; insoluble in water. Wound Antiseptic, Antisyphilitic. **Dose:** 2 to 5 grains (0.13 to 0.3 Gm.).

EXTRACTS, SQUIBB

The careful selection of prime drugs and the accurate preliminary assays to which they are subjected, combined with their complete exhaustion by the Squibb method, insure thoroughly reliable preparations. The solid extracts are made by evaporation at low temperatures, thus preventing the loss of the volatile constituents, chemical changes and the rendering insoluble of the active principles. These extracts will be found to be exceptionally active, soluble and uniform in dosage. Those which are official in the pharmacopœia are made to conform accurately and absolutely with U. S. P. standards. A number of extracts not official are assayed and adjusted to a required strength. These instances are noted under the individual extracts in the following list. All the solid extracts are put up in containers of the proper capacity, with sufficient room for the contents to expand under the ordinary changes of a temperate climate. They should not be subjected to an unusual heat, however.

⊕ **Extract Aconite Powdered*, Squibb** bottle, oz.

Extractum Aconiti. Newly official. 1 Gm. represents about 4 Gm. drug. Required by U. S. P. to assay 1.8 to 2.2 percent. ether-soluble alkaloids. Physiologically assayed by U. S. P. method; minimum lethal dose not greater than 0.00001 Gm. per Gm. weight of guinea-pig. Circulatory Sedative, Sudorific, Antineuralgic. Average Dose: $\frac{1}{6}$ grain (0.01 Gm.). Antidotes: emetics; atropine, digitalis or ammonia; small, frequent doses of stimulants; artificial respiration.

Extract Aconite Root Soft, Squibb

glass jar, $\frac{1}{4}$ lb. ; oz.

From dried tuberous root of *Aconitum Napellus*. Assays 1.8 to 2.2 percent. alkaloids. Dose: $\frac{1}{8}$ to $\frac{1}{4}$ grain (0.008 to 0.15 Gm.).

⊕ **Extract Aloes (Powdered), Squibb**

bottle, $\frac{1}{4}$ lb. ; oz.

Extractum Aloes, N. F. Aqueous. 1 Gm. represents 2 Gm. drug. Cathartic; acts mostly on large intestine. Average Dose: 2 grains (0.13 Gm.).

EXTRACT APPLES FERRATED.

Extractum Ferri Pomatum, N. F.; Crude Iron Malat \acute{e} . From fresh juice of sour apples and reduced iron. Contains about 10 percent. Fe. Mild Hematinic. Average Dose: 10 grains (0.65 Gm.).

EXTRACT BEEF.

Extractum Carnis, N. F. Residue left on evaporating fresh beef broth at low temperature. Yellowish-brown to dark-brown, pasty mass; meat-like odor and taste. Nutrient.

Extract Belladonna Leaves Powdered, Squibb

bottle, oz.

Extractum Belladonnæ Foliorum. Assays 1.18 to 1.32 percent. alkaloids. Anodyne, Antispasmodic, Antihydrotic. Average Dose: $\frac{1}{4}$ grain (0.015 Gm.). Antidotes: emetics; morphine, pilocarpine, physostigmine or aconitine.

⊕ **Extract Belladonna Leaves Soft*, Squibb**

glass jar, $\frac{1}{4}$ lb. ; oz.

Extractum Belladonnæ Foliorum. From dried leaves and tops of *Atropa Belladonna*. 1 Gm. represents about 4 Gm. drug. Assays 1.18 to 1.32 percent. alkaloids. Anodyne, Antispasmodic, Antihydrotic. Average Dose: $\frac{1}{4}$ grain (0.015 Gm.). Antidotes: emetics; morphine, pilocarpine, physostigmine or aconitine.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

EXTRACT BLACK COHOSH. See Extract Cimicifuga.

EXTRACT BLACK HAW. See Extract Viburnum Prunifolium.

EXTRACT CALABAR BEAN. See Extract Physostigma.

Extract Cannabis Powdered, Squibb 1-oz. vial
1 Gm. represents 4 Gm. drug. Dose: $\frac{1}{3}$ to 1 grain (0.02 to 0.065 Gm.).

Extract Cannabis Soft*, Squibb glass jar, oz.
Extractum Cannabis. From dried flowering tops of pistillate plants of *Cannabis Sativa* or *C. indica*. 1 Gm. represents about 8 Gm. drug. Physiologically assayed according to U. S. P. Incoordination produced by 0.004 Gm. per Kgm. weight of dog. Narcotic, Sedative, Anodyne. Average Dose: $\frac{1}{6}$ grain (0.01 Gm.). Antidotes: emetics; atropine, strychnine or caffeine, hypodermically; strong coffee.

⊕ **Extract Cascara Sagrada (Powdered), Squibb**
bottle, $\frac{1}{4}$ lb. ; oz.

Extractum Cascarae Sagradae (Rhamni Purshianæ). 1 Gm. represents 3 Gm. thoroughly seasoned Cascara bark. Laxative, acting mainly on colon; has little tendency to produce secondary constipation. Average Dose: 4 grains (0.25 Gm.). (See also Tablets [Part II].)

EXTRACT CIMICIFUGA (POWDERED).

Extractum Cimicifugæ; Extract Black Cohosh. From dried rhizome and roots of *Cimicifuga racemosa*. 1 Gm. represents about 4 Gm. drug. Used as Alterative, Stomachic and Antispasmodic. Average Dose: 4 grains (0.25 Gm.).

EXTRACT CINCHONA (SOFT).

Extractum Cinchonæ, N. F. Yields 22 to 26 percent. alkaloids. Average Dose: 4 grains (0.25 Gm.).

EXTRACT COLCHICUM CORM (POWDERED).

Extractum Colchici Cormi. Not the soft, acetic extract of U. S. P. VIIIth Rev. 1 Gm. represents about 4 Gm. drug. Assays 1.25 to 1.55 percent. colchicine. Average Dose: 1 grain (0.065 Gm.).

⊕ **Extract Colocynth (Powdered), Squibb** 1-oz. vial
Extractum Colocynthidis. From pulp of dried fruit of *Citrullus Colocynthis*; not from entire fruit. 1 Gm. represents 4 Gm. drug. Drastic Cathartic. Average Dose: $\frac{1}{2}$ grain (0.03 Gm.).

⊕ **Extract Colocynth Compound (Powdered) Squibb**
bottle, ; $\frac{1}{4}$ lb. ; oz.

Extractum Colocynthidis Compositum. From extract colocynth, aloes, cardamom, resin scammony and soap. Becomes impacted or caked on keeping, more rapidly when subjected to undue heat or moisture. When in this condition pressure of a spatula usually restores original powdered state. Drastic Cathartic. Average Dose: 4 grains (0.25 Gm.).

EXTRACT CONIUM (SOFT).

Extractum Conii, N. F. Assays 1.8 to 2.2 percent. conine. Antispasmodic, Sedative, Anodyne. **Average Dose:** $\frac{1}{2}$ grain (0.03 Gm.). **Antidotes:** tannin, emetics; atropine, strychnine, caffeine.

Extract Culver's Root. See **Extract Leptandra.**

Extract Dandelion. See **Extract Taraxacum.**

Extract Digitalis Powdered, Squibb 1-oz. vial
1 Gm. represents 4 Gm. drug. **Dose:** $\frac{1}{10}$ to $\frac{1}{5}$ grain (0.006 to 0.012 Gm.).

⊕ **Extract Digitalis Soft, Squibb**

glass jar, ; $\frac{1}{4}$ lb. ; oz.

Extractum Digitalis, U. S. P. VIIIth Rev.; Extract Foxglove. Prepared from fluidextract. 1 Gm. represents $2\frac{1}{2}$ Gm. digitalis, the dried leaves of *Digitalis purpurea*. Heart Tonic, Diuretic. **Average Dose:** $\frac{1}{6}$ grain (0.01 Gm.). **Antidotes:** tannin, emetics; strychnine or alcohol; morphine; rest in horizontal position.

Extract Ergot Soft, Squibb glass jar, $\frac{1}{4}$ lb. ; oz.
in aseptic capsules holding 60 grs., 5 in a vial, per vial.

Introduced over 30 years ago by Dr. E. R. Squibb, and since then the standard extract ergot of the world. Prior to U. S. P. VIIIth Rev. it was the official article, but for no satisfactorily explained reason the formula was changed in that revision and again in present edition. Almost entirely soluble in cold water. 1 Gm. represents 5 Gm. best Spanish ergot. Physiologically tested and proved of full activity, hence dependable. 5 Gm. dissolved in 20 mils (Cc.) water, filtered and made up to 25 mils by passing water through the filter, makes a solution of strength of official fluidextract and for many uses superior to latter, because free from alcohol and other irritating substances. This solution is well adapted for hypodermic use and should be made up only as needed. Emmenagogue, Oxytocic, Hemostatic, Circulatory Equalizer. **Average Dose:** 4 grains (0.25 Gm.). (See also Sterile Ergot, for hypodermic use; Tablets.)

Extract Ergot Powdered, Squibb bottle, oz..

1 Gm. represents 4 Gm. best Spanish ergot. Physiologically tested. **Average Dose:** 5 grains (0.3 Gm.).

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

EXTRACT EUONYMUS (POWDERED).

Extractum Euonymi, N. F.; Extract Wahoo. Prepared from fluidextract. 1 Gm. represents 4 Gm. euonymus, the dried bark of root of *Euonymus atropurpureus*. Cathartic of uncertain absorption; hence inadvisable. Average Dose: 2 grains (0.13 Gm.).

EXTRACT GELSEMIUM (POWDERED).

Extractum Gelsemii. Newly official. 1 Gm. represents 4 Gm. Gelsemium, the dried rhizome and roots of *Gelsemium sempervirens*. Antineuralgic, Nerve Sedative, Antispasmodic; in neuralgia, dysuria, hysteria, dysmenorrhea, delirium tremens, etc. Average Dose: $\frac{1}{6}$ grain (0.01 Gm.). Antidotes: tannin, emetics; atropine or strophanthin subcutaneously; stimulants.

Extract Gentian Powdered, Squibb

bottle, ; $\frac{1}{4}$ lb. ; oz.

1 Gm. represents 2 Gm. drug. Dose: 3 to 6 grains (0.2 to 0.4 Gm.).

⊕ Extract Gentian Soft*, Squibb

glass jar, ; $\frac{1}{4}$ lb. ; oz.

Extractum Gentianæ. Aqueous. 1 Gm. represents $2\frac{1}{2}$ Gm. gentian, the dried rhizome and root of *Gentiana lutea*. Bitter Tonic; Stomachic; Pill Excipient. Average Dose: 4 grains (0.25 Gm.).

Extract Glycyrrhiza Powdered, Squibb

bottle, ; $\frac{1}{4}$ lb. ; oz.

Extract Licorice Powdered. 1 Gm. represents 2 Gm. drug. Lenitive, Demulcent. Ordinary Dose: 15 grains (1 Gm.). Used chiefly to cover taste of bitter drugs.

Extract Glycyrrhiza Pure*, Squibb

glass jar, $\frac{1}{4}$ lb. ; oz.

Extractum Glycyrrhizæ Purum; Pure Extract Licorice. Pillular. 1 Gm. represents 2.75 Gm. select licorice root. Demulcent, Pectoral, Lenitive, sweetening agent, pill excipient. Ordinary Dose: 15 grains (1 Gm.). Keep cool; liable to get mouldy in warm place.

EXTRACT GOLDEN SEAL. See Extract Hydrastis.

Extract, Goulard's. See Solution Lead Subacetate.

EXTRACT HEMATOXYLON (POWDERED).

Extractum Hæmatoxyli, N. F.; Extract Logwood. Aqueous. 1 Gm. represents 16 Gm. hematoxylon, the heart-wood of *Hæmatoxylon campechianum*. Intestinal Astringent. Average Dose: 15 grains (1 Gm.).

Extract Henbane. See Extract Hyoscyamus.

EXTRACT HYDRASTIS (POWDERED).

Extractum Hydrastis; Extract Golden Seal. Newly official. 1 Gm. represents about 4 Gm. Hydrastis, the dried rhizome and roots of *Hydrastis canadensis*; assays 9 to 11 percent. ether-soluble alkaloids. Hemostatic, Alterative, Bitter Tonic; in uterine hemorrhage, catarrhal jaundice, etc. Average Dose: 8 grains (0.5 Gm.).

Extract Hyoscyamus Powdered, Squibb 1-oz. vial

Assays about 0.3 percent. alkaloids. Dose: $\frac{1}{2}$ to $1\frac{1}{2}$ grains (0.03 to 0.1 Gm.).

Extract Hyoscyamus Soft*, Squibb glass jar oz.

Extractum Hyoscyami; Extract Henbane. 1 Gm. represents about 4 Gm. hyoscyamus, the dried leaves and flowering or fruiting tops of *Hyoscyamus niger*. Assays 0.22 to 0.28 percent. alkaloids. Antispasmodic, Sedative, Analgesic; in coughs, hysteria, emphysema, nervous headache, etc. Average Dose: 1 grain (0.065 Gm.). Antidotes: tannin, emetics; morphine, pilocarpine, physostigmine, aconitine.

EXTRACT IGNATIA (POWDERED).

Extractum Ignatiæ, N. F. Yields 5.4 to 6.6 percent. alkaloids. Nerve Stimulant, Gastro-intestinal Tonic. Average Dose: $\frac{1}{2}$ grain (0.03 Gm.). Antidotes: tannin then apomorphine hypodermically; chloral with bromides per rectum; chloroform inhalation if necessary.

Extract Jalap Powdered, Squibb

bottle, ; $\frac{1}{4}$ lb. ; oz.

From dried tuberous root of *Exogonium Purga*. Adjusted to strength of 60 percent. total resin by milk sugar, which serves to keep it in powder as long as undue heat and moisture are avoided. Hydragogue Cathartic. Dose: 2 to 5 grains (0.13 to 0.3 Gm.).

Extract Jalap Soft*, Squibb glass jar, oz.

Extractum Jalapæ, N. F. Average Dose: 15 grains (1 Gm.).

EXTRACT KRAMERIA (POWDERED).

Extractum Krameriaë, N. F.; Extract Rhatany. Aqueous. 1 Gm. represents 4 Gm. krameria. Powerful Astringent; externally in leucorrhœa, spongy gums, etc., in 2 to 10 percent. solutions; internally in diarrhea. Average Dose: 8 grains (0.5 Gm.).

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Extract Leptandra (Powdered), Squibb bottle, oz.

Extractum Leptandræ, N. F.; Extract Culver's Root. 1 Gm. represents 4 Gm. leptandra, the dried rhizome and roots of *Veronica virginica*. Cathartic, acting somewhat like resin podophyllum. Average Dose: 4 grains (0.25 Gm.).

Extract Male Fern. See Oleoresin Aspidium.

Extract Malt, Squibb pint, ; gal.

Extractum Maltii. Syrupy. 1 Gm. represents 1.5 Gm. drug. Tonic, Digestive, emulsifying agent. Average Dose: 4 drachms (15 Gm.).

EXTRACT MUSK ROOT. See Extract Sumbul.

⊕ Extract Nux Vomica (Powdered), Squibb

bottle, ; ¼ lb. ; oz.

Extractum Nucis Vomicae. Assays 15.2 to 16.8 percent. alkaloids (equivalent to about 8 percent. strychnine). One and three-fifths times as strong as former official product. Bitter Stomachic and Tonic. Average Dose: ¼ grain (0.015 Gm.). Antidotes: tannin; apomorphine subcutaneously as emetic; chloral hydrate and bromides per rectum; chloroform by inhalation if necessary.

†⊕ Extract Opium (Powdered), Squibb

bottle, oz. ; ½ oz.

Extractum Opii. Aqueous. Assays 19.5 to 20.5 percent. anhydrous morphine. Antispasmodic, Anodyne, Cerebrospinal Depressant. Average Dose: ½ grain (0.03 Gm.). Antidotes: potassium permanganate (2 grains in water), then emetics; hot strong coffee; atropine or strychnine; exercise.

⊕ Extract Ovgall (Powdered), Squibb 1-oz. vial

Extractum Fellis Bovis. Newly official. 1 Gm. represents 8 Gm. oxgall. Laxative, Cholagogue, Intestinal Digestive; in typhoid fever, intestinal indigestion, deficient biliary secretion, etc. Average Dose: 1½ grains (0.1 Gm.). (See also Ovgall Purified; Tablets.)

EXTRACT PHYSOSTIGMA (POWDERED).

Extractum Physostigmatis; Extract Calabar Bean. Assays 1.7 to 2.3 percent. alkaloids. Antitetic, Antineuralgic, Peristaltic. Average Dose: ⅛ grain (0.008 Gm.). Antidotes: emetics; atropine or strychnine hypodermically; pilocarpine; chloral hydrate; stimulants.

EXTRACT PODOPHYLLUM (SOFT).

Extractum Podophylli, N. F. Slow but effective and rather irritant Cathartic. Average Dose: ¼ grain (0.015 Gm.).

EXTRACT QUASSIA (POWDERED).

Extractum Quassiae, N. F. Aqueous. 1 Gm. represents 10 Gm. drug. Bitter Stomachic. Average Dose: 1 grain (0.065 Gm.).

EXTRACT RHATANY. See Extract *Krameria*.

⊕ Extract Rhubarb (Powdered), Squibb bottle, oz.

Extractum Rhei. The new U. S. P. recognizes the powdered extract, as against soft in preceding edition. 1 Gm. represents 2 Gm. drug. Laxative. Average Dose: 4 grains (0.25 Gm.).

Extract Stramonium Powdered, Squibb bottle, oz.

Extractum Stramonii. Assays 0.9 to 1.1 percent. alkaloids, Average Dose: $\frac{1}{6}$ grain (0.01 Gm.).

Extract Stramonium Soft*, Squibb

glass jar, ; $\frac{1}{4}$ lb. ; oz.

Extractum Stramonii. From dried leaves of *Datura Stramonium* or of *D. Tatula*. 1 Gm. represents about 4 Gm. drug. Assays 0.9 to 1.1 percent. alkaloids. Antispasmodic, Sedative, Analgesic. Average Dose: $\frac{1}{6}$ grain (0.01 Gm.). Antidotes: tannin; apomorphine hypodermically as emetic; morphine; ammonia by inhalation.

EXTRACT SUMBUL (SOFT).

Extractum Sumbul; Extract Musk Root. 1 Gm. represents about 4.5 Gm. drug. Used as Antispasmodic and Nerve Tonic, in hysterical conditions, etc. Average Dose: 4 grains (0.25 Gm.).

Extract Taraxacum Powdered, Squibb. 1-oz. vial

1 Gm. represents about 3 Gm. drug. Dose: 10 to 20 grains (0.65 to 1.3 Gm.).

Extract Taraxacum Soft*, Squibb

glass jar, ; $\frac{1}{4}$ lb. ; oz.

Extractum Taraxaci; Extract Dandelion. 1 Gm. represents 3 Gm. Taraxacum, the dried rhizome and roots of *Taraxacum officinale*. Bitter Tonic, Mild Laxative. Average Dose: 15 grains (1 Gm.).

Extract Valerian (Powdered), Squibb bottle, oz.

1 Gm. represents 4 Gm. valerian, the dried rhizome and root of *Valeriana officinalis*. Used as Antispasmodic and Nerve Sedative, in hysteria and other nervous excitations. Dose: 5 to 15 grains (0.3 to 1 Gm.).

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

Extract Vanilla (Flavoring). See Tincture Vanilla.

EXTRACT VIBURNUM PRUNIFOLIUM (POWDERED).

Extractum Viburni Prunifolii; Extract Black Haw. 1 Gm. represents 5 Gm. of dried bark of *Viburnum prunifolium* or of *V. Lentago*. Used as Uterine Sedative in dysmenorrhea and habitual abortion. Average Dose: 8 grains (0.5 Gm.).

EXTRACT WAHOO. See Extract Euonymus.

Fehling's Test Solution Elements, Squibb

Copper Sulphate Solution	500 Cc.
	100 Cc.
	50 Cc.
Alkaline Tartrate Solution	500 Cc.
Also supplied in a case, 50 Cc. of each	100 Cc.
solution, together with two test tubes and	50 Cc.
a 1 Cc. pipette. Price, per set, \$1.00	

Fennel, Squibb

tin, lb.

Fæniculum. Dried ripe fruit of true *Fæniculum vulgare* (Fam. *Umbelliferæ*), carefully selected. Aromatic, Carminative. Average Dose: 15 grains (1 Gm.).

FERRIPYRINE.

Ferropyrine. Compound of 36 percent. ferric chloride and 64 percent. antipyrine. Yellowish-red powder, of acid-astringent taste. Soluble in alcohol, 6 parts water; insoluble in ether, Hematinic, Styptic. Dose: 5 to 15 grains (0.3 to 1 Gm.).

FIBROLYSIN.

Sterilized 15 percent. solution thiosinamine and sodium salicylate. Resolvent, Discutient. Dose: by hypodermic, intramuscular or intravenous injection, one 2.3 Cc. vialful (= 0.2 Gm. [3 gr.] thiosinamine) daily or every second or third day.

FIG.

Ficus, N. F. Partially dried fruit of *Ficus Cartica* (Fam. *Moraceæ*). Nutrient, Laxative.

FLAXSEED. See Linseed.

Flowers of Sulphur. See Sulphur Sublimed.

Flowers of Zinc. See Zinc Oxide.

Fluid Aloes for Tincture, Squibb pint, ; ¼ pint,

Three times strength of Tincture Aloes U. S. P. 100 mls (Cc.) represent 30 Gm. purified aloes and 60 Gm. licorice root. For conveniently making Tincture Aloes take: Fluid Aloes Squibb, Alcohol, and Water, equal volumes; mix the alcohol and water, then add the fluid aloes.

Fluid Bay Laurel, Squibb pint, ; $\frac{1}{4}$ pint,

A concentrated solution designed for the extemporaneous preparation of a superior bay rum. Take: Fluid Bay Laurel Squibb, 1 fl. oz.; Alcohol and Water, of each 32 fl. ozs. Mix the alcohol and fluid bay laurel, and add the water.

Fluid Benzoin for Tincture, Squibb pint, ; $\frac{1}{4}$ pint,

From best quality Siam gum benzoin. Especially designed for convenient preparation of Tincture Benzoin, by mixing 4 fl. ozs. of it with 12 fl. ozs. alcohol.

Fluid Benzoin Compound for Tincture, Squibb

pint, ; $\frac{1}{4}$ pint,

Twice strength of U. S. P. Tincture Benzoin Compound. Designed for rapid and convenient preparation of latter, by mixing with an equal volume alcohol.

Fluid Cantharides for Tincture, Squibb

pint, ; $\frac{1}{4}$ pint,

Prepared from best Russian Cantharides (*Cantharis vesicatoria*). 2 mils [Cc.] represent 1 Gm. drug. Designed for convenient preparation of Tincture Cantharides by diluting it with 4 volumes alcohol. Antidotes: flaxseed tea or other demulcents, then emetics subcutaneously; opium by rectum. Avoid oils!

Fluid Cardamom Compound, Squibb

pint, ; $\frac{1}{4}$ pint,

Designed for convenient preparation of Tincture Cardamom Compound as follows: Take Fluid Cardamom Compound, Squibb, 4 fl. ozs. or 125 mils (Cc.); Glycerin, 288 min. or 18.75 mils; Diluted Alcohol, to make 16 fl. ozs. or 500 mils. Mix; filter if necessary.

Fluid Cascara Aromatic (Non-Alcoholic) Squibb

pint ; 3-oz.

An improved, non-alcoholic preparation of Cascara; made from best quality, well-seasoned Cascara Sagrada bark, 1 mil (Cc.) representing 1 Gm. of drug. An efficient, pleasant Laxative, with but little tendency to produce secondary constipation. Dose: $\frac{1}{4}$ to 1 teaspoonful, after meals or at bedtime.

Fluid Cinchona Compound for Tincture, Squibb

pint, ; $\frac{1}{4}$ pint,

Each 100 mils (Cc.) represents 50 Gm. red cinchona, 40 Gm. bitter-orange peel and 10 Gm. serpentaria, and assays 2 to 2.5 Gm. of alkaloids. To reduce this product to strength of Tincture Cinchona Compound U. S. P., mix 200 mils of it with 60 mils glycerin, 540 mils alcohol and 200 mils water; filter if necessary.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

Fluid Eriodictyon Aromatic, Squibb

pint, ; ¼ pint,

Fluid Yerba Santa Aromatic. Each minim represents approximately 1 grain Eriodictyon. Convenient for the extemporaneous preparation of Aromatic Syrup Eriodictyon (Syrup Corrigenes) of National Formulary, by adding to 32 mls (Cc.) enough simple syrup to make 1000 mls.

Fluid Gambir Compound, Squibb

pint, ; ¼ pint,

So-called Fluidextract Catechu Compound. Specially intended for convenient preparation of compound tincture gambir. 100 mls (Cc.) represent 50 Gm. gambir and 25 Gm. Saigon cinnamon. To conveniently make Tincture Gambir Compound take: Fluid Gambir Compound Squibb, 1 volume; Diluted Alcohol, 9 volumes.

Fluid Ginger for Syrup, Squibb pint, ; ¼ pint,

Made from best quality of Jamaica ginger. Clearly soluble in simple syrup. Intended for the convenient and rapid preparation of Syrup Ginger, by adding 27/8 fluidounces to 29 1/8 fluidounces of simple syrup.

Fluid Glycyrrhiza (Licorice) for Quinine, Squibb

pint, ; ¼ pint,

Intended especially for masking the taste of quinine and other bitter or nauseating remedies. It produces clear mixtures with syrup, glycerin or water. It is incompatible with acids. For conveniently making Syrup Licorice, take: Fluid Licorice Squibb, 2 fl. ozs.; Syrup, 14 fl. ozs.

Fluid Golden Seal Colorless, Squibb

. pint, ; ¼ pint,

Containing in each 16 fluidounces 20 grains hydrastine hydrochloride, in non-alcoholic menstruum. Astringent and Antiphlogistic topically; Tonic and Hemostatic internally. Used externally in gonorrhea, leucorrhea, endometritis, etc., usually in 1 to 2 in 16 dilution; internally, in uterine hemorrhage, chronic dyspepsia, internal hemorrhoids, etc. **Dose:** 15 to 60 minims (1 to 4 mls [Cc.]). Incompatible with alkalis, borax or tannic acid. (The Squibb laboratories make also the official Fluidextract Golden Seal and Glycerite Hydrastis [so-called "non-alcoholic" fluidextract].)

Fluid Hydrastis. See Fluid Golden Seal Colorless.

Fluid Lavender Compound for Tincture, Squibb

pint, ; ¼ pint,

From oil lavender flowers, oil rosemary, Saigon cinnamon, cloves, nutmeg and red saunders. Eight times strength of Tincture Lavender Compound. For conveniently making latter, take: Fluid Lavender Compound, Squibb, 2 fl. ozs.; Alcohol, 10 1/2 fl. ozs.; Water, 3 1/2 fl. ozs. Mix the alcohol and water, then add the fluid lavender compound.

Fluid Licorice for Quinine. See Fluid Glycyrrhiza.

Fluid Rhubarb Aromatic for Syrup, Squibb

pint, ; $\frac{1}{4}$ pint,

For conveniently making Syrup Rhubarb Aromatic, take of this Fluid 1 fl. oz. and Syrup 19 fl. ozs.

Fluid Rhubarb Aromatic for Tincture, Squibb

pint, ; $\frac{1}{4}$ pint,

For conveniently making Tincture Rhubarb Aromatic, take: Fluid Rhubarb Aromatic Squibb, 5 fl. ozs.; Alcohol, 5 fl. ozs.; Water, 4 fl. ozs.; Glycerin, 1 fl. oz. Mix the alcohol, water and glycerin, then add the fluid rhubarb aromatic.

Fluid Rose Soluble, Squibb

pint, ; $\frac{1}{4}$ pint,

Designed for the extemporaneous preparation of rose water, by diluting it with 31 volumes distilled water.

Fluid Tolu for Syrup (1:19), Squibb

pint, ; $\frac{1}{4}$ pint,

Solution Tolu for Syrup. For the easy manufacture of Syrup Tolu, by diluting it with 19 volumes syrup.

Fluid White Pine Compound, Squibb

pint, ; $\frac{1}{4}$ pint,

1000 mils (Cc.) represent 340 Gm. each white pine and wild cherry barks, 40 Gm. each spikenard root and balm gilead buds, 32 Gm. sanguinaria, 28 Gm. sassafras and 24 mils chloroform. Specially designed for conveniently preparing Syrup White Pine Compound, by mixing 1 volume of it with 3 volumes syrup. To make Syrup White Pine Compound *with Morphine* of N. F. strength, add $\frac{1}{5}$ grain morphine sulphate per fl. oz. syrup white pine compound.

Fluid Wild Cherry for Syrup, Squibb

pint, ; $\frac{1}{4}$ pint,

Specially designed for the convenient and rapid preparation of Syrup Wild Cherry, by mixing 1 volume of it with 3 volumes syrup.

Fluid Yerba Santa Aromatic. See Fluid Eriodictyon Aromatic.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

FLUIDEXTRACTS.

The constantly growing recognition of the certainty of therapeutic action of the officially made fluidextracts, from properly selected material, urges us to be more pressing in the presentation of these products. In a fluidextract the active principles are directly available, so that the value of these preparations in medicine is not in doubt. A selection of the most active drugs offered by the market or obtained by direct importation from best sources, and a thorough exhaustion of the assayed and tested drug, assure the production of fluidextracts of a standard strength, containing the maximum amount of active principle and accurately representing the drug. The process of extraction employed is the well-known *repercolation process*, which originated in the Squibb Laboratories. The menstrua used are those which most effectively extract the medicinal ingredients of the drugs and thus are theoretically true solvents of them. The strength of the alcohol in these fluidextracts is fully equal to the requirements of the U. S. P., hence when deposits are discovered they may be considered as inert if all the self-evident precautions against evaporation, heat, etc., have been taken by the purchaser. In a considerable number of cases the pharmacopœia prescribes a definite assayed alkaloidal strength of the fluidextracts, and to this standard they are therefore accurately adjusted. Otherwise, 1 mil (Cc.) represents 1 Gm. of the drug. Fluidextract Cannabis is officially required to be assayed biologically; and we physiologically assay also those which the U. S. P. recommends being so tested.

Fluidextract Aconite, Squibb pint, ; gal.

Fluidextractum Aconiti. From dried tuberous root of genuine *Aconitum Napellus*. Required by U. S. P. to assay 0.45 to 0.55 Gm. ether-soluble alkaloids per 100 mls (Cc.). Physiologically assayed by U. S. P. method; minimum lethal dose not more than 0.0004 nor less than 0.00032 mil per Gm. weight of guinea-pig. Sedative, Febrifuge, Sudorific, Antineuralgic. **Average Dose:** $\frac{1}{2}$ minim (0.03 mil). **Antidotes:** tannin, then emetics; atropine, digitalis or ammonia; small, often repeated doses of stimulants; artificial respiration, if required.

FLUIDEXTRACT ADONIS.

Fluidextractum Adonidis, N. F.; Fluidextract Bird's Eye. From dried root of *Adonis vernalis*. Cardiac Stimulant, of digitalis group. **Average Dose:** 2 minims (0.13 mil [Cc.]). **Antidotes:** emetics; stimulants; opium to control gastro-intestinal symptoms.

Fluidextract Aletris, Squibb pint, ; $\frac{1}{4}$ pint,

Fluidextractum Aletridis, N. F.; Fluidextract Stargrass or Starwort. From dried rhizome of *Aletris farinosa*. Simple Bitter, also used as Uterine Tonic; in amenorrhea, rheumatism, flatulent dyspepsia, etc. **Average Dose:** 30 minims (2 mls [Cc.]).

FLUIDEXTRACT ANGELICA ROOT.

Fluidextractum Angelicæ Radicis, N. F. From dried rhizome and roots of *Angelica atropurpurea* (Fam. *Umbelliferæ*). Stimulating Expectorant, like tolu. **Average Dose:** 30 minims (2 mils [Cc.]).

FLUIDEXTRACT APOCYNUM.

Fluidextractum Apocyni, N. F.; Fluidextract Canadian Hemp. From dried rhizome of *Apocynum cannabinum*. Cardiac Tonic, of digitalis group; unreliable as to rate of absorption. **Average Dose:** 12 minims (0.75 mil [Cc.]).

FLUIDEXTRACT ARALIA.

Fluidextractum Araliæ, N. F.; Fluidextract Spikenard. From dried root of *Aralia racemosa*. Used as Alterative, Diaphoretic. **Average Dose:** 30 minims (2 mils [Cc.]).

FLUIDEXTRACT ARBOR VITAE. See Fluidextract Thuja.

Fluidextract Arnica Flowers, Squibb

pint, ; ¼ pint,

Fluidextractum Arnicæ, N. F. From dried flower-heads of *Arnica montana*. Feeble Rubefacient externally; Alterative internally, in chronic rheumatism, catarrhs, nephritis, etc. **Average Dose:** 12 minims (0.75 mil [Cc.]).

FLUIDEXTRACT AROMATIC POWDER.

Fluidextractum Aromaticum. Each mil (Cc.) represents 1 Gm. of mixture of Saigon cinnamon (35), ginger (35), cardamom (15) and nutmeg (15). Aromatic, Carminative. **Average Dose:** 15 minims (1 mil [Cc.]).

Fluidextract Asclepias, Squibb

pint, ; ¼ pint,

Fluidextractum Asclepiadis, N. F.; Fluidextract Pleurisy Root. From dried root of *Asclepias tuberosa*. Used as Diaphoretic; in pleurisy, bronchitis, colic, etc. **Average Dose:** 30 minims (2 mils [Cc.]).

Fluidextract Aspidosperma, Squibb

pint, ; ¼ pint,

Fluidextractum Aspidospermatis; Fluidextract Quebracho. From dried bark of *Aspidosperma Quebracho blanco*. Respiratory Tonic, Antispasmodic; chiefly in asthma and emphysema. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

FLUIDEXTRACT BAPTISIA.

Fluidextractum Baptisæ, N. F.; Fluidextract Wild Indigo. From dried root of *Baptisia tinctoria*. Astringent. Used externally in ulcers, sore throat, etc.; internally, chiefly in typhoid fever. Average Dose: 15 minims (1 mil [Cc.]).

FLUIDEXTRACT BEARBERRY. See Fluidextract Uva Ursi.

Fluidextract Belladonna Leaves, Squibb

pint, ; ¼ pint,

From dried leaves and tops of *Atropa Belladonna*. Assays about 0.35 Gm. alkaloids in 100 mls (Cc.). Anodyne, Antispasmodic, Antithyrotic. Dose: 1 to 2 minims (0.06 to 0.13 mil). Antidotes: tannin, then emetics; morphine; pilocarpine; physotigmine; aconitine.

Fluidextract Belladonna Root, Squibb

pint, ; ¼ pint,

Fluidextractum Belladonnæ Radicis. Assays 0.405 to 0.495 Gm. alkaloids in 100 mls (Cc.). Average Dose: 1 minim (0.06 mil).

Fluidextract Berberis, Squibb

pint, ; ¼ pint,

Fluidextractum Berberidis, N. F.; Fluidextract Barberry. From dried rhizome and roots of *Berberis Aquifolium* and other species of *Berberis*. Used as Bitter Tonic and Alterative; in anorexia, general debility, jaundice, etc. Average Dose: 30 minims (2 mls [Cc.]).

Fluidextract Beth Root. See Fluidextract Trillium.

FLUIDEXTRACT BIRD'S EYE. See Fluidextract Adonis.

FLUIDEXTRACT BITTERSWEET.

Fluidextractum Dulcamaræ, N. F. From dried young branches of *Solanum Dulcamara*. Used as Alterative in skin diseases, leprosy, rheumatism, etc. Average Dose: 1 fluidrachm (4 mls [Cc.]).

FLUIDEXTRACT BLACKBERRY. See Fluidextract Rubus.

Fluidextract Black Cohosh. See Fluidextract Cimicifuga.

FLUIDEXTRACT BLADDER-WRACK. See Fluidextract Fucus.

FLUIDEXTRACT BLOODROOT. See Fluidextract Sanguinaria.

FLUIDEXTRACT BLUE FLAG.

Fluidextractum Iridis Versicoloris, N. F. From dried rhizome of *Iris versicolor*. Cathartic, similar to podophyllum. Average Dose: 30 minims (2 mls [Cc.]).

FLUIDEXTRACT BOLDO.

Fluidextractum Boldi, N. F. From dried leaves of *Boldus*. Aromatic, mild Diuretic. Average Dose: 8 minims (0.5 mil [Cc.]).

FLUIDEXTRACT BONESET. See Fluidextract Eupatorium.

FLUIDEXTRACT BROOM TOPS. See Fluidextract Scoparius.

Fluidextract Bryonia, Squibb pint, ; ¼ pint,
From dried roots of *Bryonia alba*. Drastic resinous Cathartic.
Dose: 10 to 30 minims (0.6 to 2 mls [Cc.]),

Fluidextract Buchu, Squibb pint, ; ¼ pint,
Fluidextractum Buchu. From best quality short buchu leaves
 (*Barosma betulina*). Diuretic, Anticatatrrhal; chiefly in urin-
 ary disorders. Average Dose: 30 minims (2 mls [Cc.]).

Fluidextract Buchu Compound, Squibb

pint, ; ¼ pint, •

Fluidextractum Buchu Compositum, N. F. Each fluidounce represents about 285 grains short buchu and 57 grains each of cubeb, juniper and uva ursi. Diuretic, Urinary Anticatharrhal. Average Dose: 30 minims (2 mls [Cc.]).

Fluidextract Buckthorn Bark. See Fluidextract Frangula.

FLUIDEXTRACT BUCKTHORN BERRIES. See Fluidextract Rhamnus Cathartica.

Fluidextract Burdock. See Fluidextract Lappa.

FLUIDEXTRACT BUTTERNUT. See Fluidextract Juglans.

FLUIDEXTRACT CALENDULA.

Fluidextractum Calendulæ, N. F.; Fluidextract Marigold.
From flowering herb of *Calendula officinalis*. Used externally,
on bruises, wounds, etc. (pure or diluted).

Fluidextract Calumba, Squibb pint, ; ¼ pint,
Fluidextractum Calumbæ, N. F.; Fluidextract Columbo.
 Dropped from U. S. P. From dried root of *Jateorrhiza pal-*
mata. Bitter Tonic, Stomachic. Average Dose: 30 minims (2
 mls [Cc.]).

FLUIDEXTRACT CANADIAN HEMP. See Fluidextract Apocynum.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Fluidextract Cannabis Squibb pint, ; ¼ pint,

Fluidextractum Cannabis. From dried flowering tops of pistillate plants of *Cannabis sativa* or variety *indica*. Physiologically assayed according to U. S. P.; incoordination produced by 0.03 mil (Cc.) per Kgm. weight of dog. Sedative. Anodyne. **Average Dose:** 1½ minims (0.1 mil). **Antidotes:** atropine; strychnine; caffeine; hot, strong coffee.

Fluidextract Capsicum, Squibb pint, ; ¼ pint,

Fluidextractum Capsici, U. S. P. VIIIth Rev. From dried ripe fruits of *Capsicum frutescens*. Carminative, Stomachic; occasionally used externally (diluted, in sore throat). **Average Dose:** 1 minim (0.06 mil [Cc.]), well diluted. **Antidotes:** demulcents, antiphlogistics; morphine for pain.

Fluidextract Cardamom Compound. See Fluid Cardamom Compound. pint, ; ¼ pint,⊕ **Fluidextract Cascara Sagrada, Squibb**

pint, ; ¼ pint,

Fluidextractum Cascarae Sagradae. From select, thoroughly seasoned, dried bark of trunk and branches of *Rhamnus Purshiana*. No additions or alterations have been made in this official fluidextract, for the purpose of enhancing its activity or masking or eliminating its characteristic odor and taste—a not uncommon practice. Laxative, acting mainly on colon; has but little tendency to produce secondary constipation. **Average Dose:** 15 minims (1 mil [Cc.]).

⊕ **Fluidextract Cascara Sagrada Aromatic, Squibb**

pint, ; ¼ pint,

Fluidextractum Cascarae Sagradae Aromaticum. From thoroughly seasoned Cascara Sagrada bark, sweetened and flavored. While all the active constituents are preserved, the disagreeable bitter principles are eliminated. It has not had any other purgative agent added to it. **Average Dose:** 30 minims (2 mls). (See also Fluid Cascara Aromatic [Non-Alcoholic].)

Fluidextract Castanea, Squibb. pint, ; ¼ pint,

Fluidextractum Castaneae, N. F.; Fluidextract Chestnut Leaves. From dried leaves of *Castanea dentata*. Astringent, but used chiefly in whooping cough. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Fluidextract Catechu Compound. See Fluid Gambir Compound.**FLUIDEXTRACT CATNEP.**

Fluidextractum Catariae, N. F. From herb of *Nepeta Cataria*. Aromatic Carminative, similar to peppermint. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

FLUIDEXTRACT CAULOPHYLLUM.

Fluidextractum Caulophylli, N. F.; Fluidextract Blue Cohosh. From dried rhizome and rootlets of *Caulophyllum thalictroides*. Used as Diuretic and Emmenagogue. Average Dose: 8 minims (0.5 mil [Cc.]).

Fluidextract Celery, Squibb pint, ; ¼ pint,

Fluidextractum Apii Fructus, N. F. From seed of *Apium graveolens*. Used as Emmenagogue. Average Dose: 30 minims (2 mils [Cc.]).

Fluidextract Chestnut Leaves. See Fluidextract Castanea.**FLUIDEXTRACT CHIMAPHILA.**

Fluidextractum Chimaphilæ, N. F.; Fluidextract Pipsissewa. From dried leaves of *Chimaphila umbellata*. Used as Tonic, Astringent, Diuretic. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT CHIONANTHUS.

Fluidextractum Chionanthi, N. F.; Fluidextract Fringe Tree Bark. From dried bark of root of *Chionanthus virginica*. Used as Alterative and Aperient. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT CHIRATA.

Fluidextractum Chiratæ, N. F.; Fluidextract Chiretta. From dried plant of *Swertia Chirayita*. Bitter Stomachic, similar to gentian. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Cimicifuga, Squibb pint, ; ¼ pint,

Fluidextractum Cimicifugæ; Fluidextract Black Cohosh. From dried rhizome and roots of *Cimicifuga racemosa*. Used as Alterative, Sedative, Emmenagogue. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Cinchona, Squibb pint, ; ¼ pint,

Fluidextractum Cinchonæ. Assays 4 to 5 Gm. alkaloids in 100 mils (Cc.); contains 10 vol. percent. glycerin. Antiperiodic, Bitter Tonic. Average Dose: 15 minims (1 mil).

FLUIDEXTRACT CINCHONA AQUEOUS.

Fluidextractum Cinchonæ Aquosum, N. F. 100 mils (Cc.) yield about 5 Gm. alkaloids. Bitter Tonic, Antiperiodic. Average Dose: 15 minims (1 mil [Cc.]).

This house supplies only one quality of each product: that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

Fluidextract Cinchona Red, Compound. See Fluid Cinchona Compound.

FLUIDEXTRACT COCILLANA.

Fluidextractum Cocillanæ, N. F. From dried bark of *Guarea Rusbyi* (Fam. *Meliaceæ*). Nauseant Expectorant, similar to ipecac. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Coffee Roasted, Squibb

pint, ; ¼ pint,

Fluidextractum Coffeæ, N. F. Designed for those desiring the Tonic and Stimulant effects of coffee in concentrated form. Average Dose: 30 minims (2 mils [Cc.]).

Fluidextract Colchicum Root, Squibb

pint, ; ¼ pint,

Fluidextractum Colchici Cormi, N. F. From dried corm of *Colchicum autumnale*. Assays 0.31 to 0.39 Gm. colchicine in each 100 mils (Cc.) (about $\frac{1}{300}$ grain colchicine in 1 minim). Antipodagric, Antineuralgic, Alterative. Average Dose: 3 minims (0.2 mil). Antidotes: tannin, then emetics; opiates for pain and diarrhea; hot, strong coffee and other stimulants.

Fluidextract Colchicum Seed, Squibb

pint, ; ¼ pint.

Fluidextractum Colchici Seminis. Assays 0.36 to 0.44 Gm. colchicine in 100 mils (Cc.). Average Dose: 3 minims (0.2 mil). Antidotes: as of preceding.

Fluidextract Columbo. See Fluidextract Calumba.

Fluidextract Condurango, Squibb pint, ; ¼ pint,

Fluidextractum Condurango, N. F. From dried bark of *Marsdenia Condurango*. Bitter Stomachic; chiefly in ulcer and cancer of stomach. Average Dose: 1 fluidrachm (4 mils [Cc.]).

Fluidextract Conium, Squibb pint, ; ¼ pint,

Fluidextractum Conii, N. F.; Fluidextract Hemlock Seed. From fruit of *Conium maculatum*. Assays 0.35 to 0.45 Gm. conine in 100 mils (Cc.). Antispasmodic, Sedative. Average Dose: 3 minims (0.2 mil). Antidotes: tannin, then emetics; atropine or strychnine hypodermically; caffeine or other stimulants.

FLUIDEXTRACT CONVALLARIA FLOWERS.

Fluidextractum Convallariæ Florum, N. F.; Fluidextract Lily of the Valley Flowers. From flowers of *Convallaria majalis*. Cardiac Tonic, similar to digitalis. Average Dose: 8 minims (0.5 mil [Cc.]).

FLUIDEXTRACT CONVALLARIA ROOT.

Fluidextractum Convallariæ Radicis, N. F.; Fluidextract Lily of the Valley Root. Heart tonic, similar to digitalis. **Average Dose:** 8 minims (0.5 mil [Cc.]).

FLUIDEXTRACT COPTIS.

Fluidextractum Coptis, N. F.; Fluidextract Gold Thread. From dried plant of *Coptis trifolia*. Bitter Tonic. **Average Dose:** 30 minims (2 mils [Cc.]).

Fluidextract Corn Silk. See Fluidextract Zea.**FLUIDEXTRACT CORNUS.**

Fluidextractum Corni, N. F.; Fluidextract Dogwood. From bark of root of *Cornus florida*. Astringent, Antiperiodic; practically obsolete. **Average Dose:** 30 minims (2 mils [Cc.]).

FLUIDEXTRACT CORYDALIS.

Fluidextractum Corydalis, N. F., Fluidextract Turkey Corn. From dried tubers of *Bicuculla canadensis*. Used as Antiluetic, but considered useless and therefore harmful by Council on P. & C. of A. M. A. **Average Dose:** 10 minims (0.65 mil [Cc.]).

FLUIDEXTRACT COTO. See Fluidextract Paracoto.**Fluidextract Cotton Root Bark, Squibb**

1/2 pint, ; 1/4 pint,

Fluidextractum Gossypii Corticis, N. F.; Fluidextract Gossypium. From dried bark of root of *Gossypium herbaceum* and other species of *Gossypium*. Used as Emmenagogue. **Average Dose:** 30 minims (2 mils [Cc.]).

Fluidextract Couch Grass. See Fluidextract Triticum.**Fluidextract Cramp Bark.** See Fluidextract Viburnum Opulus.**FLUIDEXTRACT CRANESBILL.** See Fluidextract Geranium.**Fluidextract Cubeb, Squibb** pint, ; 1/4 pint,

Fluidextractum Cubebæ, N. F. From dried fruits of *Piper Cubeba*. Diuretic, Sedative, Stimulating Expectorant. **Average Dose:** 15 minims (1 mil [Cc.]).

FLUIDEXTRACT CULVER'S ROOT. See Fluidextract Leptandra.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Fluidextract Cypripedium, Squibb pint, ; ¼ pint,

Fluidextractum Cypripedii, N. F.; Fluidextract Ladies' Slipper. From dried rhizome and roots of *Cypripedium hirsutum* and other species of *Cypripedium*. Used as Nerve Stimulant and Tonic; in hypochondriasis, neuralgia, etc. **Average Dose:** 15 minims (1 mil [Cc.]).

Fluidextract Damiana, Squibb pint, ; ¼ pint,

Fluidextractum Damianæ, N. F. From leaves of *Turnera microphylla*. Used as Nerve Tonic and Aphrodisiac. **Average Dose:** 30 minims (2 mils [Cc.]).

Fluidextract Dandelion. See Fluidextract Taraxacum.

Fluidextract Digitalis, Squibb pint, ; ¼ pint,

Fluidextractum Digitalis; Fluidextract Foxglove. From best quality, select Digitalis, the dried leaves of *Digitalis purpurea*. Physiologically assayed according to U. S. P., and standardized; minimum lethal dose not more than 0.0006 mil (Cc.) per Gm. weight of frog. Also assayed by "cat method" of Hatcher, for those who desire to administer it by Eggleston method. Direct Cardiac Stimulant, Diuretic. Most effective when heart is rapid and very irregular; of avail in edema only when latter arises from impaired circulation. Naturally apt to cause gastro-intestinal disturbance. **Average Dose:** 1 minim (0.06 mil [Cc.]). **Antidotes:** tannin, emetics; nitroglycerin, strychnine or alcohol; morphine; rest in horizontal position.

Fluidextract Dioscorea, Squibb pint, ; ¼ pint,

Fluidextractum Dioscoreæ, N. F.; Fluidextract Wild Yam. From dried rhizome of *Dioscorea villosa*. Used in colic and other abdominal irritation. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Fluidextract Dog Grass. See Fluidextract Triticum.

FLUIDEXTRACT DOGWOOD. See Fluidextract Cornus.

Fluidextract Dogwood, Jamaica. See Fluidextract Jamaica Dogwood.

FLUIDEXTRACT DROSERA.

Fluidextractum Droseræ, N. F.; Fluidextract Sundew. From air-dried flowering plant of *Drosera rotundifolia*, *D. intermedia* or *D. longifolia* (Fam. *Droseraceæ*). Used in respiratory diseases; no established indications for its use. **Average Dose:** 60 minims (4 mils [Cc.]).

FLUIDEXTRACT DULCAMARA. See Fluidextract Bittersweet.

Fluidextract Echinacea, Squibb pint, ; ¼ pint,

Fluidextractum Echinacæ, N. F. From dried root of *Echinacea angustifolia*. Used as Alterative and Antiluetic internally, Antiseptic and snakebite antidote externally. **Average Dose:** 15 minims (1 mil [Cc.]).

FLUIDEXTRACT EUPATORIUM.

Fluidextractum Eupatorii, N. F.; Fluidextract Boneset. From dried leaves and flowering tops of *Eupatorium perfoliatum*. Used as Diaphoretic. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT EUPHORBIA PILULIFERA.

Fluidextractum Euphorbiæ Piluliferæ, N. F. From dried herb of *Euphorbia pilulifera* (Fam. *Euphorbiacæ*). Used mainly in asthma and chronic bronchitis. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT FALSE UNICORN. See Fluidextract Helonias.

Fluidextract Foxglove. See Fluidextract Digitalis.

Fluidextract Frangula, Squibb pint, ; ¼ pint,

Fluidextractum Frangulæ; Fluidextract Buckthorn Bark. From dried bark of *Rhamnus Frangula*. Laxative. Average Dose: 15 minims (1 mil [Cc.]).

FLUIDEXTRACT FROST-WEED. See Fluidextract Helianthemum.

FLUIDEXTRACT FUCUS.

Fluidextractum Fuci, N. F.; Fluidextract Bladder-Wrack. from thallus of *Fucus vesiculosus*. Used as Alterative in goiter and tuberculous glands chiefly. Average Dose: according to N. F., 10 minims (0.6 mil [Cc.]); other authorities state 30 to 120 minims (2 to 8 mils).

FLUIDEXTRACT GALEGA.

Fluidextractum Galegæ, N. F. From dried flowering tops of *Galega officinalis* (Goat's Rue). Used as Galactagogue and Nerve Stimulant. Average Dose: 1 fluidrachm (4 mils [Cc.]).

Fluidextract Gambir Compound. See Fluid Gambir Compound.

Fluidextract Gelsemium, Squibb pint, ; ¼ pint.

Fluidextractum Gelsemii; Fluidextract Yellow Jasmine. From dried rhizome and roots of *Gelsemium sempervirens*. Assays 0.3 Gm. alkaloids in 100 mils (Cc.). Antineuralgic, Nerve Sedative, Antispasmodic. Average Dose: ½ minim (0.03 mil). Antidotes: tannin; emetics; atropine or strophanthin subcutaneously; stimulants.

Fluidextract Gentian, Squibb pint, ; ¼ pint.

Fluidextractum Gentianæ. From dried rhizome and roots of *Gentiana lutea*. Simple Bitter. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Gentian Compound, Squibb

pint, ; 1/2 pint, ; 1/4 pint,

A concentrated form of the official compound tincture gentian, being made from the same ingredients and with same menstruum. It represents the official ingredients in the proportion of 1 Gm. of the compound powder in each mil (Cc.). **Dose:** 10 to 20 minims (0.65 to 1.25 mils).

FLUIDEXTRACT. GERANIUM.

Fluidextractum Geranii, N. F.; Fluidextract Cranesbill. From dried rhizome of *Geranium maculatum*. External and Intestinal Astringent. **Average Dose:** 15 minims (1 mil [Cc.]). Applied externally pure.

Fluidextract. Ginger, Squibb pint, ; 1/4 pint,

Fluidextractum Zingiberis. From best Jamaica Ginger, the dried rhizome of *Zingiber officinale*. Aromatic, Carminative, Gastro-intestinal Stimulant. **Average Dose:** 15 minims (1 mil [Cc.]).

Fluidextract Ginger, Soluble. See Fluid Ginger for Syrup.

⊕ **Fluidextract Glycyrrhiza (Licorice), Squibb**

pint, ; 1/4 pint,

Extractum Glycyrrhizæ Fluidum, U. S. P. 1890. Considered superior to present official product. From dried rhizome and roots of *Glycyrrhiza glabra typica* or of *G. glabra glandulifera*, known in commerce respectively as Spanish Licorice and Russian Licorice. Demulcent, Expectorant. **Average Dose:** 30 minims (2 mils [Cc.]). Incompatible with acids.

FLUIDEXTRACT GOAT'S RUE. See Fluidextract Galega.

Fluidextract Golden Seal. See Fluidextract Hydrastis.

FLUIDEXTRACT GOLD THREAD. See Fluidextract Coptis.

Fluidextract Gossypium. See Fluidextract Cotton Root.

FLUIDEXTRACT GRANATUM. See Fluidextract Pomegranate.

Fluidextract Grindelia, Squibb pint, ; 1/4 pint,

Fluidextractum Grindeliæ. From dried leaves and flowering tops of *Grindelia camporum*, *G. cuneifolia* or *G. squarrosa*. Antispasmodic. Anticatarrhal; in asthma, whooping-cough, etc. **Average Dose:** 30 minims (2 mils [Cc.]).

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

Fluidextract Grindelia Soluble, Squibbpint, ; $\frac{1}{4}$ pint,

The resinous matter has been rendered soluble by treatment with alkali, the finished fluidextract being miscible without precipitation with aqueous preparations, as syrups, elixirs, etc. Incompatible with acids or acid salts. Same action and dose as preceding.

Fluidextract Guarana, Squibb pint, ; $\frac{1}{4}$ pint,

Fluidextractum Guaranae. Assays 3.6 to 4.4 Gm. caffeine in 100 mls (Cc.). Nerve Stimulant, Analgesic; chiefly in headaches and narcotic poisoning. Average Dose: 30 minims (2 mls).

Fluidextract Hamamelis Leaves, Squibbpint, ; $\frac{1}{4}$ pint,

Fluidextractum Hamamelidis Foliorum, N. F.; Fluidextract Witch Hazel. Astringent. Average Dose: 30 minims (2 mls [Cc.]).

FLUIDEXTRACT HELIANTHEMUM.

Fluidextractum Helianthemi, N. F.; Fluidextract Frost-Weed. Astringent, Alterative, Emetic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

FLUIDEXTRACT HELLEBORE. See Fluidextract *Veratrum Viride*.

FLUIDEXTRACT HELONIAS.

Fluidextract Heloniadis, N. F.; Fluidextract False Unicorn. From dried rhizome and roots of *Chamaelirium luteum*. Assorted Uterine Tonic. Average Dose: 30 minims (2 mls [Cc.]).

Fluidextract Hemlock Seed. See Fluidextract *Conium*.

FLUIDEXTRACT HEMP, CANADIAN. See Fluidextract *Apocynum*.

Fluidextract Henbane. See Fluidextract *Hyoscyamus*.

FLUIDEXTRACT HOPS.

Fluidextractum Humuli, N. F. From dried strobiles of *Humulus Lupulus*. Aromatic Bitter, Stomachic. Average Dose: 30 minims (2 mls [Cc.]).

FLUIDEXTRACT HORSE-NETTLE BERRIES. See Fluidextract *Solanum*.

FLUIDEXTRACT HYDRANGEA.

Fluidextractum Hydrangeae, N. F. From dried rhizome and roots of *Hydrangea arborescens*. Cathartic, Diuretic, Diaphoretic. Average Dose: 30 minims (2 mls [Cc.]).

⊕ **Fluidextract Hydrastis, Squibb** pint, ; ¼ pint,
Fluidextractum Hydrastis; Fluidextract Golden Seal. Assays 1.8 to 2.2. Gm. ether-soluble alkaloids in 100 mls (Cc.). Hemostatic Astringent, Cholagogue, Antihydrotic. Average Dose: 30 minims (2 mls [Cc.]).

FLUIDEXTRACT HYDRASTIS, AQUEOUS. See Glycerite Hydrastis.

Fluidextract* Hydrastis, Colorless, so-called. See Fluid Golden Seal Colorless.

FLUIDEXTRACT HYDRASTIS NON-ALCOHOLIC. See Glycerite Hydrastis.

Fluidextract Hyoscyamus, Squibb pint, ; ¼ pint,
Fluidextractum Hyoscyami; Fluidextract Henbane. From dried leaves and flowering tops of *Hyoscyamus niger*. Assays 0.055 to 0.075 alkaloids in 100 mls (Cc.). Antispasmodic Sedative, Analgesic; in coughs, nervous ailments, pains, etc. Average Dose: 3 minims (0.2 mil). Antidotes: tannin, emetics; morphine, pilocarpine, physostigmine, aconitine; stimulants by mouth. This fluidextract frequently deposits crystals of potassium nitrate, a salt always found in good hyoscyamus leaves. It is not a necessary element in the therapeutic efficiency of the preparation, and when found may be removed by decantation, or by filtration.

⊕ **Fluidextract Ipecac, Squibb** pint, ; ¼ pint,
Fluidextractum Ipecacuanhæ. Assays 1.8 to 2.2 Gm. ether-soluble alkaloids in 100 mls (Cc.). Nauseant Expectorant, Emetic, and Antamebic. Average Dose: Emetic, 15 minims (1 mil); Expectorant, 1 minim (0.06 mil).

FLUIDEXTRACT IRIS. See Fluidextract Blue Flag.

Fluidextract Jaborandi. See Fluidextract Pilocarpus.

FLUIDEXTRACT JALAP.

Fluidextractum Jalapæ, N. F. From dried tuberous root of *Exogonium Purga*. Hydragogue Cathartic. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Jamaica Dogwood, Squibb

pint, ; ¼ pint,

From root-bark of *Piscidia Erythrina*. Hypnotic, Sedative, and dental Anodyne; in nervous insomnia, ovarian pain, toothache, etc. Dose: 1 to 2 fluidrachms (4 to 8 mls [Cc.]).

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

FLUIDEXTRACT JUGLANS.

Fluidextractum Juglandis, N. F.; Fluidextract Butternut. From inner bark of root of *Juglans cinerea*. Obsolete Cathartic, similar to cascara. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Fluidextract Juniper, Squibb pint, ; ¼ pint,

Fluidextractum Juniperi, N. F. From dried ripe fruit (berries) of *Juniperus communis*. Irritant Diuretic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

FLUIDEXTRACT KAVA.

Fluidextractum Kavæ, N. F. From dried rhizome and roots of *Piper methysticum*. Mild Irritant, similar to cubeb; used chiefly in gonorrhea. **Average Dose:** 15 minims (1 mil [Cc.]).

Fluidextract Kola, Squibb pint, ; ¼ pint,

Fluidextractum Kolæ, N. F. From dried cotyledons of several species of *Cola*. Nerve and Muscle Stimulant, Diuretic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Fluidextract Krameria, Squibb pint, ; ¼ pint,

Fluidextractum Krameriaæ, N. F.; Fluidextract Rhatany. Dropped from U. S. P. From dried root of *Krameria triandra*, *K. lxina* or *K. argentea*. Powerful Astringent; chiefly in intestinal catarrh and hemorrhage. **Average Dose:** 15 minims (1 mil [Cc.]).

Fluidextract Ladies' Slipper. See Fluidextract *Cypripedium*.

Fluidextract Lappa, Squibb pint, ; ¼ pint,

Fluidextractum Lappæ, N. F.; Fluidextract Burdock. From dried root of *Arctium Lappa*. Alterative. **Average Dose:** 30 minims (2 mils [Cc.]).

Fluidextract Larkspur, Squibb pint, ; ¼ pint,

Acetic Fluidextract Larkspur. The use of Larkspur, Stavesacre and other varieties of *Delphinium* in ointments, lotions, etc., for the removal of body-parasites, has created a demand for a concentrated form which may be diluted with water and alcohol at the time of using. A fluidextract made with 10 percent. acetic acid is best adapted for this purpose, as it contains all the virtues of the drug. To prepare parasiticide lotion, take: Fluidextract Larkspur Squibb, 1 fl. oz.; gradually add alcohol 1½ fl. ozs.; set aside 5 minutes, then add water 14⅜ fl. ozs. Let stand 24 hours, then filter. Little used internally (dropsy, asthma, etc.). **Dose:** 3 minims (0.2 mil [Cc.]). **Antidotes:** tannin, emetics; ammonia or digitalis; brandy.

FLUIDEXTRACT LEPTANDRA.

Fluidextractum Leptandræ; Fluidextract Culver's Root. From dried rhizome and roots of *Veronica virginica*. Cathartic. **Average Dose:** 15 minims (1 mil [Cc.]).

Fluidextract Licorice. See Fluidextract Glycyrrhiza.

Fluidextract Licorice for Quinine Mixtures. See Fluid Glycyrrhiza.

FLUIDEXTRACT LIFE ROOT. See Fluidextract Senecio.

FLUIDEXTRACT LILY OF THE VALLEY FLOWERS. See Fluidextract Convallaria Flowers.

FLUIDEXTRACT LILY OF THE VALLEY ROOT. See Fluidextract Convallaria Root.

Fluidextract Lobelia, Squibb pint, ; $\frac{1}{4}$ pint,

Fluidextractum Lobeliæ. The new U. S. P. has readopted the alcoholic fluidextract and dropped the acetic product of VIIIth. Rev. From dried leaves and flowering tops of *Lobelia inflata*. Antispasmodic, Expectorant; in whooping-cough, asthma, etc. **Average Dose:** $2\frac{1}{2}$ minims (0.15 mil [Cc.]). **Antidotes:** tannin, emetics hypodermically; brandy or ammonia; morphine.

FLUIDEXTRACT LUPULIN.

Fluidextractum Lupulini, N. F. From glandular trichomes separated from strobiles of *Humulus Lupulus*. Bitter Tonic, similar to gentian. **Average Dose:** 8 minims (0.5 mil [Cc.]).

Fluidextract Mandrake. See Fluidextract Podophyllum.

FLUIDEXTRACT MARIGOLD. See Fluidextract Calendula.

FLUIDEXTRACT MATICO.

Fluidextractum Matico, N. F. From leaves of *Piper angustifolium*. Used as Genito-urinary Stimulant and Anticatarrhal; similar to buchu, cubeb, etc., **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

FLUIDEXTRACT MEZEREUM.

Fluidextractum Mezerei, N. F. Dropped from U. S. P. From dried bark of *Daphne Mezereum*, *D. Gnidium* or *D. Laureola*. Used as Antiluetic and Vesicant. **Dose:** 5 to 15 minims (0.2 to 1 mil [Cc.]), well diluted. **Antidotes:** demulcents; emetics.

FLUIDEXTRACT MULLEIN LEAVES.

Fluidextractum Verbasci Foliorum, N. F. From dried leaves of *Verbascum Thapsus* and other species of *Verbascum*. Demulcent, Anticatarrhal. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Fluidextract Nux Vomica, Squibb pint, ; $\frac{1}{4}$ pint,
Fluidextractum Nucis Vomicae. From dried ripe seeds of *Strychnos Nux-vomica*. Assays 2.37 to 2.63 Gm. alkaloids in 100 mls (Cc.). Bitter Stomachic, Tonic. Average Dose: 1 minim (0.06 mil). Antidotes: tannin; apomorphine subcutaneously as emetic; chloral hydrate with bromides per rectum; chloroform by inhalation if required.

FLUIDEXTRACT ORANGE PEEL, BITTER.

Fluidextractum Aurantii Amari. From dried rind of fruit of *Citrus Aurantium amara*. Aromatic Bitter Stomachic, taste corrigent. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Orange Peel, Sweet, Squibb

pint, ; $\frac{1}{4}$ pint,

From dried outer rind of ripe fruit of *Citrus Aurantium*. Flavoring ingredient.

FLUIDEXTRACT PARACOTO.

Fluidextractum Paracoto, N. F. From bark of an unidentified tree belonging to *Lauraceae*. Intestinal Astringent. Average Dose: 5 minims (0.3 mil [Cc.]).

FLUIDEXTRACT PAREIRA.

Fluidextractum Pareirae, N. F. From dried root of *Chondrodendron tomentosum*. Bitter Tonic. Average Dose: 30 minims (2 mls [Cc.]).

FLUIDEXTRACT PARSLEY ROOT.

Fluidextractum Petroselinæ Radicis, N. F. Carminative. Average Dose: 30 minims (2 mls [Cc.]).

Fluidextract Passion Flower, Squibb

pint, ; $\frac{1}{4}$ pint,

From dried leaves of *Passiflora incarnata*. Used as Nerve Sedative, in insomnia, restlessness, etc. Dose: 15 to 30 minims (1 to 2 mls [Cc.]).

Fluidextract Phytolacca, Squibb. pint, ; $\frac{1}{4}$ pint,

Fluidextractum Phytolaccae, N. F.; Fluidextract Poke Root. From dried root of *Phytolacca decandra*. Used as Emetic, Alterative, Cathartic. Average Dose: emetic, 15 minims (1 mil [Cc.]); alterative $1\frac{1}{2}$ minims (0.1 mil).

Fluidextract Pichi, Squibb pint, ; $\frac{1}{4}$ pint,

From dried leaflets and twigs of *Fabiana imbricata*. Diuretic, Urinary Anticatarrhal. Considered contra-indicated in organic renal disease. Dose: 30 to 60 minims (2 to 4 mls [Cc.]).

Fluidextract Pilocarpus, Squibb pint, ; $\frac{1}{4}$ pint,
Fluidextractum Pilocarpi; Fluidextract Jaborandi. From dried leaflets of *Pilocarpus Jaborandi* or of *P. microphyllus*. Assays 0.55 to 0.65 Gm. alkaloids in 100 mls (Cc.). Sialagogue, Galactagogue, Diaphoretic; also used as stimulant of hair follicles. Average Dose: 30 minims (2 mls).

FLUIDEXTRACT PINK ROOT. See Fluidextract Spigelia.

FLUIDEXTRACT PIPSISSEWA. See Fluidextract Chimaphila.

Fluidextract Pleurisy Root. See Fluidextract Asclepias.

Fluidextract Podophyllum, Squibb pint, ; $\frac{1}{4}$ pint,
Fluidextractum Podophylli; Fluidextract Mandrake (May Apple). From dried rhizome of *Podophyllum peltatum*. Cathartic. Average Dose: 8 minims (0.5 mil [Cc.]).

Fluidextract Poke Root. See Fluidextract Phytolacca.

FLUIDEXTRACT POMEGRANATE.

Fluidextractum Granati. From dried bark of stems and roots of *Punica Granatum*, and containing about 10 percent. glycerin. Anthelmintic, Astringent. Average Dose: 30 minims (2 mls [Cc.]).

FLUIDEXTRACT PRICKLY ASH BARK. See Fluidextract Xanthoxylum.

Fluidextract Prunus Virginiana. See Fluidextract Wild Cherry.

Fluidextract Quassia, Squibb pint, ; $\frac{1}{4}$ pint,
Fluidextractum Quassiae, N. F. Dropped from U. S. P. From wood of *Picrasma excelsa* or *Quassia amara*. Bitter Tonic, Teniafuge. Average Dose: 8 minims (0.5 mil [Cc.]).

Fluidextract Quebracho. See Fluidextract Aspidosperma.

Fluidextract Queens Root. See Fluidextract Stillingia.

FLUIDEXTRACT QUERCUS.

Fluidextractum Quercus, N. F.; Fluidextract White Oak. From dried bark of *Quercus alba*; 10 volume percent. glycerin. Tannin-bearing Astringent like krameria. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Red Clover. See Fluidextract Trifolium.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

FLUIDEXTRACT RHAMNUS CATHARTICA.

Fluidextractum Rhamni Catharticae, N. F.; Fluidextract Buckthorn Berries. From dried, ripe fruit of *Rhamnus cathartica*. Cathartic. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Rhamnus Frangula. See Fluidextract Frangula.

Fluidextract Rhamnus Purshiana. See Fluidextract Cascara Sagrada.

Fluidextract Rhatany. See Fluidextract Krameria.

Fluidextract Rhubarb, Squibb pint, ; ¼ pint,
Fluidextractum Rhei. From prime quality Chinese root. Stomachic, Laxative. Average Dose: 15 minims (1 mil [Cc.]).

FLUIDEXTRACT RHUS GLABRA.

Fluidextractum Rhois Glabrae, N. F.; Fluidextract Sumach Berries. From dried fruit of *Rhus glabra*, and containing 10 volume percent. of glycerin. Tannin-bearing Astringent, similar to krameria. Average Dose: 15 minims (1 mil [Cc.]).

FLUIDEXTRACT ROSE.

Fluidextractum Rosae. From dried petals of *Rosa gallica*, and containing 10 percent. by volume of glycerin. Mild Astringent; used chiefly as flavoring and for making syrup rose. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT RUBUS.

Fluidextractum Rubi, N. F.; Fluidextract Blackberry. Dropped from U. S. P. From dried bark of *Rubus villosus*, *R. nigrobaccus* or of *R. cuneifolius*. Intestinal Astringent. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Rumex, Squibb pint, ; ¼ pint,
Fluidextractum Rumicis, N. F.; Fluidextract Yellow Dock. From dried root of *Rumex crispus*. Alterative, External Astringent. Average Dose: 1 fluidrachm (4 mils [Cc.]). Externally pure (in ulcers and skin diseases).

Fluidextract Sabal, Squibb pint, ; ¼ pint,
Fluidextractum Sabal; Fluidextract Saw Palmetto. From partially dried berries of *Serenoa serrulata*. Used as Genito-urinary Anticatarrhal. Average Dose: 15 minims (1 mil [Cc.]).

FLUIDEXTRACT SANGUINARIA.

Fluidextractum Sanguinariae, N. F.; Fluidextract Bloodroot. Essentially the alcoholic product of U. S. P. 1890; not acetic, as per U. S. P. VIIIth Rev. From dried rhizome of *Sanguinaria canadensis*. Expectorant; large doses are emetic. Average Dose: 1½ minims (0.1 mil [Cc.]).

Fluidextract Sarsaparilla, Squibb pint, ; ¼ pint,
Fluidextractum Sarsaparillæ. From best grade of official Sarsaparilla. Used as Alterative; in chronic rheumatism, skin diseases, etc. **Average Dose:** 30 minims (2 mls [Cc.]).

Fluidextract Sarsaparilla Compound, Squibb pint, ; ¼ pint,
Fluidextractum Sarsaparillæ Compositum. Each mil (Cc.) representing 1 Gm. mixture of sarsaparilla, licorice, sassafras and mezereum, and carrying 10 volume percent. of glycerin. **Average Dose:** 30 minims (2 mls).

Fluidextract Sarsaparilla Compound for Syrup, Squibb pint, ; ¼ pint,
 For conveniently making Syrup Sarsaparilla Compound, take of this fluidextract 7 fl. ozs. and enough syrup to make 30 fl. ozs.

Fluidextract Saw Palmetto. See Fluidextract Sabal.

FLUIDEXTRACT SCOPARIUS.

Fluidextractum Scoparii, N. F.; Fluidextract Broom Tops. From dried tops of *Cytisus Scoparius*. Diuretic. Considered contra-indicated in the presence of acute renal inflammation. **Average Dose:** 15 minims (1 mil [Cc.]).

FLUIDEXTRACT SCULLCAP. See Fluidextract Scutellaria.

FLUIDEXTRACT SCUTELLARIA.

Fluidextractum Scutellariæ, N. F.; Fluidextract Scullcap. From dried plant of *Scutellaria lateriflora*. Used as Nervine and Antispasmodic, chiefly in chorea and convulsions. **Average Dose:** 15 minims (1 mil [Cc.]).

FLUIDEXTRACT SENECIO.

Fluidextractum Senecionis, N. F.; Fluidextract Life Root. From dried overground portions of *Senecio aureus*. Used as Tonic, Diuretic and Diaphoretic. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Fluidextract Senega, Squibb pint, ; ¼ pint,

Fluidextractum Senegæ; Fluidextract Seneka Snakeroot. Pharmacists and physicians frequently complain that this fluid-extract becomes "worthless" or "spoiled" by gelatinizing. Good senega root contains a large amount of pectin, and the better the root the more it appears to contain. This physical property is necessary to its proper therapeutic effects, and therefore it would not be justifiable to select a root which is inferior in this property. Unless the gelatinized clot is of too long standing, warmth applied, or at times a few drops of ammonia water with agitation, will restore it to its original fluid condition. Nauseant Expectorant. **Average Dose:** 15 minims (1 mil [Cc.]).

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

⊕ **Fluidextract Senna, Squibb** pint, ; ¼ pint,

Fluidextractum Sennæ. From best quality senna leaves, the dried leaflets of *Cassia acutifolia* or of *C. angustifolia*, known in commerce respectively as Alexandria Senna and India Senna. Cathartic. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT SERPENTARIA.

Fluidextractum Serpentariæ, N. F.; Fluidextract Virginia Snakeroot. From dried rhizome and roots of *Aristolochia Serpentaria* or of *A. reticulata*. Bitter, like gentian. Average Dose: 15 minims (1 mil [Cc.]).

FLUIDEXTRACT SOLANUM.

Fluidextractum Solani, N. F.; Fluidextract Horse-Nettle Berries. From air-dried ripe fruit of *Solanum carolinense*. Used as Antispasmodic and Sedative; in convulsions, epilepsy, etc. Average Dose: 1 fluidrachm (4 mils [Cc.]).

FLUIDEXTRACT SPIGELIA.

Fluidextractum Spigeliæ; Fluidextract Pink Root. From dried rhizome and roots of *Spigelia marilandica*. Teniafuge. Average Dose: 1 fluidrachm (4 mils [Cc.]).

FLUIDEXTRACT SPIKENARD. See Fluidextract Aralia.**Fluidextract Squill, Squibb** pint, ; ¼ pint,

Fluidextractum Scillæ. From bulb of white variety of *Urginea maritima*. The new U. S. P. has dropped the acetic fluid-extract official in VIIIth Rev., and adopted the alcoholic preparation. Physiologically assayed according to U. S. P. and standardized; minimum lethal dose not greater than 0.0006 mil (Cc.) per Gm. weight of frog. Expectorant, Diuretic; large doses are Emetic. Average Dose: 1½ minims (0.1 mil).

Fluidextract Squill Compound, Squibb

pint, ; ¼ pint,

For Syrup. Each mil (Cc.) represents 1 Gm. mixture of equal parts each squill and senega, and 0.0125 Gm. tartar emetic. 160 mils with 840 mils syrup makes 1000 mils syrup squill compound.

FLUIDEXTRACT STAPHISAGRIA.

Fluidextractum Staphisagriæ; Fluidextract Stavesacre. From ripe seed of *Delphinium Staphisagria*. Antiparasitic, Rubefacient; in scabies, rheumatism, etc. Applied in 1:16 dilution. Antidotes: tannin, emetics; chloral hydrate; chloroform by inhalation; ammonia, digitalis, brandy.

Fluidextract Star Grass. See Fluidextract Aletris.**FLUIDEXTRACT STAVESACRE.** See Fluidextract Staphisagria.

Fluidextract Stillingia, Squibb pint, ; ¼ pint,

Fluidextractum Stillingiæ; Fluidextract Queen's Root. From dried root of *Stillingia sylvatica*. Sialagogue, Expectorant, Alterative. Average Dose: 30 minims (2 mils [Cc.]).

Fluidextract Stillingia Compound, Squibb

pint, ; ¼ pint,

Fluidextractum Stillingiæ Compositum, N. F. Each mil (Cc.) represents 1 Gm. mixture of *stillingia*, *corydalis*, *iris*, *sambucus*, *chimaphila*, *coriander* and *xanthoxylum* berries. Used as Alterative; in liver diseases, spring fever, etc. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT STRAMONIUM.

Fluidextractum Stramonii, N. F. From leaves of *Datura Stramonium* or of *D. Tatula*. Assays 0.22 to 0.28 Gm. alkaloïds in 100 mils (Cc.). Antispasmodic, Sedative, Analgesic. Average Dose: 1 minim (0.06 mil [Cc.]). Antidotes: tannin; apomorphine hypodermically as emetic; morphine; ammonia by inhalation.

FLUIDEXTRACT SUMACH BERRIES. See Fluidextract *Rhus Glabra*.

Fluidextract Sumbul, Squibb pint, ; ¼ pint,

Fluidextractum Sumbul; Fluidextract Musk Root. From dried rhizome and roots of *Ferula Sumbul*. Used as Antispasmodic, Nerve Tonic. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT SUNDEW. See Fluidextract *Drosera*.

Fluidextract Taraxacum, Squibb pint, ; ¼ pint,

Fluidextractum Taraxaci; Fluidextract Dandelion. From dried root of *Taraxacum officinale*. Bitter Tonic, mild Laxative. Average Dose: 2½ fluidrachms (10 mils [Cc.]).

FLUIDEXTRACT THUJA.

Fluidextractum Thujæ, N. F.; Fluidextract Arbor Vitæ. From recently dried, leafy young twigs of *Thuja occidentalis*. Used as Febrifuge, Expectorant, Anthelmintic. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT THYME.

Fluidextractum Thymi, N. F. From dried tops of *Thymus vulgaris*. Antispasmodic, Carminative, Aromatic Stimulant. Average Dose: 1 fluidrachm (4 mils [Cc.]).

This house supplies only one quality of each product: that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

Fluidextract Trifolium, Squibb pint, ; ¼ pint,
Fluidextractum Trifolii, N. F.; Fluidextract Red Clover.
 From dried flowers of *Trifolium pratense*. Used as Alterative,
 Expectorant. Average Dose: 1 fluidrachm (4 mils [Cc.]).
 Generally administered in combination with other drugs.

Fluidextract Trifolium Compound, Squibb pint, ; ¼ pint,
 Each mil (Cc.) represents 1 Gm. of mixture of 8 parts red
 clover blossoms and 4 parts each of berberis, poke root, bur-
 dock root, cascara, stillingia, and prickly ash bark. Used as
 Alterative. Dose: 1 to 2 fluidrachms (4 to 8 mils [Cc.]). To
 prepare Syrup Trifolium Compound, take of this Fluidextract
 4 fluidounces, Potassium Iodide 128 grains, and Simple Syrup
 12 fluidounces.

Fluidextract Trillium, Squibb pint, ; ¼ pint,
Fluidextract Trillii, N. F.; Fluidextract Beth Root. From
 dried rhizome of *Trillium erectum*. Used as Tonic, Astringent.
 Average Dose: 30 minims (2 mils [Cc.]).

Fluidextract Triticum, Squibb pint, ; ¼ pint,
Fluidextractum Triticici; Fluidextract Couch Grass or Dog
 Grass. From dried rhizome of *Agropyron repens*. Diuretic,
 Demulcent; in cystitis and irritable bladder. Average Dose:
 2½ fluidrachms (10 mils [Cc.]).

FLUIDEXTRACT TURKEY CORN. See Fluidextract Corydalis.

Fluidextract Uva Ursi, Squibb pint, ; ¼ pint,
Fluidextractum Uvæ Ursi; Fluidextract Bearberry Leaves.
 From leaves of *Arctostaphylos Uva-ursi*; 30 percent. by vol-
 ume of glycerin. Diuretic, Urinary Anticatharrhal; chiefly in
 vesical catarrh. Average Dose: 30 minims (2 mils [Cc.]).

Fluidextract Valerian, Squibb pint, ; ¼ pint,
Fluidextractum Valerianæ, N. F. From root of *Valeriana*
officinalis. Used in hysteria and other nervous excitations.
 Average Dose: 30 minims (2 mils [Cc.]).

Fluidextract Veratrum Viride, Squibb pint, ; ¼ pint,
Fluidextractum Veratri Viridis. From rhizome and root
Veratrum viride. Cardiac Depressant, Diaphoretic; em-
 in acute febrile affections, puerperal convulsions, etc. Av
 Dose: 1½ minims (0.1 mil [Cc.]). Antidotes: tannin, apo-
 morphine subcutaneously as emetic; then morphine with atro-
 pine; stimulants.

FLUIDEXTRACT VERBASCUM. See Fluidextract Mullein Leaves.

FLUIDEXTRACT VERVAIN.

Fluidextractum Verbenæ, N. F.; Fluidextract Blue Vervain. From dried overground portion of *Verbena hastata*. Tonic, Expectorant, Diaphoretic. Average Dose: 15 minims (1 mil [Cc.]).

Fluidextract Viburnum Opulus. Squibb

pint, ; ¼ pint,

Fluidextractum Viburni Opuli, N. F.; Fluidextract Cramp Bark. From dried bark of *Viburnum opulus* (Fam. *Caprifoliaceæ*). Used as Antispasmodic and Uterine Sedative. Average Dose: 30 minims (2 mils [Cc.]).

Fluidextract Viburnum Prunifolium, Squibb

pint, ; ¼ pint,

Fluidextractum Viburni Prunifolii; Fluidextract Black Haw. From dried bark of root of *Viburnum prunifolium* or of *V. Lentago*. Used as Uterine Sedative; chiefly in dysmenorrhea, habitual abortion, etc. Average Dose: 30 minims (2 mils [Cc.]).

FLUIDEXTRACT WAHOO. See Fluidextract Euonymus.

FLUIDEXTRACT WHITE OAK. See Fluidextract Quercus.

Fluidextract White Pine Compound. See Fluid White Pine Compound.

Fluidextract Wild Cherry, Squibb pint, ; ¼ pint,

Fluidextractum Pruni Virginianæ, N. F. Dropped from U. S. P. From bark of *Prunus serotina* (*P. virginiana*). Contains 20 volume percent. of glycerin. Sedative, Expectorant, but mainly used as flavor. Average Dose: 30 minims (2 mils [Cc.]).

Fluidextract Wild Cherry for Syrup. See Fluid Wild Cherry.

FLUIDEXTRACT WILD INDIGO. See Fluidextract Baptisia.

Fluidextract Wild Yam. See Fluidextract Dioscorea.

Fluidextract Witch Hazel Leaves. See Fluidextract Hamamelis.

FLUIDEXTRACT XANTHOXYLUM.

Fluidextractum Xanthoxyli; Fluidextract Prickly Ash Bark. From *Xanthoxylum americanum* or *X. Clava-Herculis*. Bitter, similar to gentian. Average Dose: 30 minims (2 mils [Cc.]).

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Fluidextract Yellow Dock. See Fluidextract Rumex.

Fluidextract Yellow Jasmine. See Fluidextract Gelsemium.

Fluidextract Yerba Santa. See Fluidextract Eriodictyon.

Fluidextract Yerba Santa Aromatic. See Fluid Eriodictyon Aromatic.

Fluidextract Zea, Squibb pint, ; $\frac{1}{4}$ pint,
Fluidextractum Zeæ, N. F.; Fluidextract Corn Silk. From fresh styles and stigmas of *Zea Mays*. Used as Diuretic and Anticatatarrhal, in inflammatory conditions of bladder. Average Dose: 1 fluidrachm (4 mils [Cc.]).

FLUIDGLYCERATES.

A new class of N. F. preparations, of same drug strength as fluidextracts (Cc. for Gm.), but containing about 50 percent. by volume of glycerin and no alcohol. The following are official:

Fluidglycerate Cascara Sagrada, Squibb
 pint, ; $\frac{1}{4}$ pint,

Fluidglycerate Cascara Sagrada Aromatic, Squibb
 pint ; $\frac{1}{4}$ pint,

Fluidglycerate Glycyrrhiza (Licorice), Squibb
 pint, ; $\frac{1}{4}$ pint,

Fluidglycerate Krameria, Squibb pint, ; $\frac{1}{4}$ pint,

Fluidglycerate Rhubarb, Squibb pint, ; $\frac{1}{4}$ pint,

FORMALIN AND FORMOL. Brands of Solution Formaldehyde.

FORMIN. Brand of Hexamethylenamine.

FORMYL TRIBROMIDE. See Bromoform.

Formyl Trichloride. See Chloroform.

Formyl Triiodide. See Iodoform.

Fowler's Solution. See Solution Potassium Arsenite.

Foxglove. See Digitalis.

FRANCIS' TRIPLEX PILLS. See Pills Aloes, Mercury and Scammony Compound.

FRANGULA.

Frangula; Buckthorn Bark. Dried bark of *Rhamnus Frangula* (Fam. *Rhamnaceæ*). Laxative, similar to cascara. Average Dose: 15 grains (1 Gm.). (See also Fluidextract.)

Friars' Balsam. See Tincture Benzoin Compound.

FRINGE TREE BARK. See *Chionanthus*.

FROST-WEED. See *Helianthemum*.

FUCUS.

Fucus, N. F.; Bladderwrack. Dried thallus of *Fucus vesiculosus* (Fam. *Fucaceæ*). Alterative, Resolvent; in goiter, tuberculous glands, etc. **Average Dose:** 10 grains (0.65 Gm.).

GALANGA.

Galangal, N. F. Dried rhizome of *Alpinia officinarum* (Fam. *Zingiberaceæ*). Aromatic odor; hot, ginger-like taste. Aromatic Carminative, resembling ginger. **Average Dose:** 15 grains (1 Gm.).

GALEGA.

Galega, N. F.; Goat's Rue. Dried flowering tops of *Galega officinalis* (Fam. *Leguminosæ*). Indistinct odor; mucilaginous, slightly bitter, astringent taste. Used as Galactagogue, Nerve Stimulant. **Average Dose:** 1 drachm (4 Gm.).

GALLS. See Nutgall.

GAMBIR.

Gambir; Pale Catechu. Dried extract prepared from decoctions of leaves and twigs of *Ourouparia Gambir* (Fam. *Rubiaceæ*). Soluble in water to extent of 65 percent., in alcohol 60 percent. Odorless, brown powder; bitterish, very astringent taste. Intestinal Astringent. **Average Dose:** 15 grains (1 Gm.). (See also Tincture.)

GAMBOGE.

Cambogia. Gum-resin obtained from *Garcinia Hanburii* (Fam. *Guttiferæ*). Not less than 65 percent. soluble in alcohol. Inodorous, very acrid, cylindrical pieces; grayish-orange-brown externally, orange-red internally. The powder is bright-yellow and irritating to nasal mucous membrane. Hydragogue Cathartic. **Average Dose:** 2 grains (0.13 Gm.).

GARANTOSE. Brand of Benzosulphinide (Saccharin).

GARGLE GUAIAIC COMPOUND.

Gargarisma Guaiaci Compositum, N. F. Each 100 mils (Cc.) contains 10 mils each ammoniated tincture guaiac and compound tincture cinchona, 20 mils clarified honey, 4 Gm. potassium chlorate, 0.2 mil oil peppermint.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

GARLIC.

Allium, N. F. Fresh bulb of *Allium sativum* (Fam. *Liliaceæ*). Irritant Expectorant, similar to senega. Average Dose: 30 grains (2 Gm.).

⊕ GELATIN.

Gelatinum. From animal tissues (skin, ligaments and bones) by treatment with boiling water. Insoluble in cold water (but swells and softens when immersed in it), alcohol, chloroform, ether, oils; soluble in hot water, acetic acid, glycerin. Coagulated by tannin, chlorine, bromine and corrosive mercury chloride; formaldehyde renders it hard and insoluble. Nutrient, but used largely pharmaceutically.

GELATIN CHONDRUS.

Gelatinum Chondri, N. F.; Irish Moss Gelatin. Evaporated, scaled decoction of Irish Moss. Demulcent, Nutritive.

GELATIN GLYCERINATED.

Gelatinum Glycerinatum. 50 percent. gelatin. Base for throat lozenges and medicated suppositories and bougies.

GELSEMIUM.

Gelsemium; Yellow Jasmine Root. Dried rhizome and roots of *Gelsemium sempervirens* (Fam. *Loganiaceæ*). Pronounced characteristic odor; slightly aromatic, bitter taste. Antineuralgic, Antispasmodic, Nerve Sedative; in migraine and neuralgia, in ovarian, uterine and rheumatic pain. Average Dose: $\frac{1}{2}$ grain (0.03 Gm.). (See also Fluidextract; Tincture.)

⊕ Gentian, Squibb Ground for Percolation tin, lb.

Gentiana; Gentian Root. Dried rhizome and roots of *Gentiana lutea* (Fam. *Gentianaceæ*). Simple Bitter, Stomachic. Average Dose: 15 grains (1 Gm). (See also Elixir; Extract; Fluidextract; Tincture.)

Gentian Compound Ground, Squibb tin, lb.

Mixture of ground Gentian, Bitter Orange Peel and Cardamom, in proportions given in U. S. P. formula for Tincture Gentian Compound, and used for preparing latter.

GERANIUM.

Geranium, N. F.; Cranesbill. Dried rhizome of *Geranium maculatum*, collected in late summer or autumn. Intestinal Astringent, like krameria. Average Dose: 15 grains (1 Gm.).

⊕ **Ginger, Squibb**

***Ground for Percolation**
Powdered

tin, lb.
 tin, lb.

sprinkler-top tins, 4-oz., per doz.
 2-oz., per doz. ; 1-oz., per doz.

Zingiber. Dried rhizome of *Zingiber officinale* (Fam. *Zingiberaceæ*). The chief sources of ginger are West Indies, Jamaica, Africa, Hindoostan and China. The rhizome is collected in the winter, cleaned, scalded and rapidly dried, and is then known as Black Ginger. The process of preparation is carried still further with *Jamaica* Ginger and some that comes from the East Indies, by the removal of this dark skin, thus leaving the roots yellowish-white in color. As this variety commands a higher price, the poorer qualities are sometimes made to resemble it by bleaching or covering with thin milk of lime or slaked lime. It has a warming, cordial effect when used as a condiment, and also tends to prevent flatulence. The article here offered is strictly pure and of best quality procurable. **Average Dose:** 15 grains (1 Gm.). (See also Fluid Ginger; Fluidextract; Oleoresin; Tincture.)

Ginger Soluble, for Syrup. See Fluid Ginger for Syrup.

Glauber's Salt. See Sodium Sulphate.

GLUCOSE LIQUID.

Glucosum. From incomplete hydrolysis of starch; consists chiefly of dextrose and dextrans. Nearly colorless, odorless, thick, sweet liquid. Very soluble in water, sparingly in alcohol. Nutrient, but used largely pharmaceutically and technically.

GLUSIDE. See Benzosulphinide (Saccharin).

GLUSIMIDE. Brand of Benzosulphinide (Saccharin).

⊕ **Glycerin, Squibb**

bottle, lb. ; ¼ lb.

Glycerinum; Glycerol. $C_3H_5(OH)_3$. A liquid obtained by hydrolysis of vegetable or animal fats, or fixed oils. Most carefully selected and subjected in our laboratories to the severest tests for purity. It is of proper density, stands the rigid sulphuric acid test, and is free from arsenic, mineral impurities and acidic radicles indicative of contaminating salts. An especially acceptable article for internal use. Clear, thick, sweet liquid. Sp. gr. not below 1.249. Soluble in all proportions of water or alcohol; insoluble in ether, chloroform or oils. Used chiefly technically and as a solvent, but also internally in place of sugar in diabetes and as nutritive. **Average Dose:** 1 fluidrachm (4 mils [Cc.]). Incompatible with chromic acid and permanganates. (See also Suppositories.)

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

GLYCERITE ACID CARBOLIC. See Glycerite Phenol.

⊕ **Glycerite Acid Tannic, Squibb**

bottle, pint ; ¼ pint

Glyceritum Acidi Tannici. 20 percent. tannic acid. Antiseptic, Astringent paint, on fissured nipples, erysipelas, sores, etc.; rarely internally. **Average Dose:** 30 minims (2 mils [Cc.]).

Glycerite Bismuth, Squibb bottle, pint ; ¼ pint

Glyceritum Bismuthi, N. F. 1 fluidrachm contains about 16 grains bismuth and sodium tartrate; 100 mils (Cc.) yield about 12.8 Gm. bismuth oxide. Gastric Sedative, Intestinal Astringent; used mainly for making elixirs. **Ordinary Dose:** 10 minims (0.65 mil [Cc.]).

⊕ **Glycerite Boroglycerin, Squibb**

bottle, lb. ; ¼ lb.

Glyceritum Boroglycerini U. S. P. is apt to become discolored during the process of making. We therefore increase the boric acid from 31 percent. to 35 percent. (equivalent to 56 percent. glyceryl borate or boroglycerin) and obtain a whiter and better article. Thick, sweet, colorless liquid. Soluble in water. Antiseptic.

GLYCERITE EGG YOLK.

Glyceritum Vitelli, N. F.; Glyconin. 45 percent. egg yolk, 55 percent. glycerin. Protective, Emulsifier, Vehicle.

GLYCERITE GOLDEN SEAL. See Glycerite Hydrastis.

GLYCERITE GUAIAIC.

Glyceritum Guaiaci, N. F. Each fluidounce contains about 40 grains guaiac, with 30 minims solution potassium hydroxide. Alterative, Emmenagogue. **Average Dose:** 30 minims (2 mils [Cc.]). Incompatible with mineral acids, ferric chloride, spirit nitrous ether.

GLYCERITE HYDRASTIS.

Glyceritum Hydrastis; so-called Fluidextract Hydrastis Non-Alcoholic. Assays from 1.12 to 1.37 Gm. ether-soluble alkaloïds in 100 mils (Cc.). An alcoholic percolate is made from powdered hydrastis, the alcohol removed by distillation, and resultant thick extract incorporated with water and glycerin. Astringent, Antiphlogistic; topically and internally. **Average Dose:** 30 minims (2 mils [Cc.]).

Glycerite Pepsin, Squibb bottle, pint ; ¼ pint

Glyceritum Pepsini, N. F.; Glycerol Pepsin. Each fluidounce contains about 40 grains of 1:3000 pepsin and 5 minims hydrochloric acid. Useful in making essence pepsin and where pepsin is desired in liquid form. **Average Dose:** 45 minims (3 mils [Cc.]).

GLYCERITE PHENOL.

Glyceritum Phenolis; Glycerite Carbolic Acid. Mixture of 1 volume liquefied phenol and 4 volumes glycerin. External and internal Antiseptic, Antipruritic. Average Dose: 5 minims (0.3 mil [Cc.]), in water. Applied diluted with water, 1:4 to 6.

GLYCERITE STARCH.

Glyceritum Amyli. 10 percent. starch well gelatinized. Vehicle for dermics; pill-excipient, etc.

GLYCERITE TAR.

Glyceritum Picis Liquidæ, N. F. 100 mls (Cc.) contain 6.3 Gm. tar, with glycerin, alcohol and water. Expectorant, Antiseptic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

GLYCERITE TRAGACANTH.

Glyceritum Tragacanthæ, N. F. 100 mls (Cc.) contain about 12.5 Gm. tragacanth, with glycerin and water. Pill excipient.

GLYCEROGELATINS.

Soft masses, melting at body temperature, composed of gelatin, glycerin, water and a medicament employed in skin diseases, with or without the addition of zinc oxide. They are prepared with glycerinated gelatin (U. S. P.) as vehicle. The N. F. recognizes: *Glycerogelatin Salicylic Acid*, 10%; *Glycerogelatin Iodoform*, 10%; *Glycerogelatin Zinc Firm.*, 10% zinc oxide; *Glycerogelatin Zinc Soft*, 10% zinc oxide.

Glycerol. See Glycerin and Glycerite.

GLYCONIN. See Glycerite Egg Yolk.

GLYCOPHENO AND GLYCOSINE. Brands of Benzosulphinide (Sacharin).

⊕ Glycyrrhiza Powdered, Squibb

Glycyrrhiza. Licorice. Dried rhizome and roots of *Glycyrrhiza glabra glandulifera* or of *G. glabra typica* (Fam. Leguminosæ); known in commerce respectively as Russian Licorice and Spanish Licorice. Demulcent, Expectorant; also absorbent in pill making. Average Dose: 30 grains (2 Gm.). (See also Extract; Fluidextract; Mixture; Powder; Troches [Part II].)

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

GLYCYRRHIZIN AMMONIATED.

Glycyrrhizinum Ammoniatum. Sweet principle of glycyrrhiza (licorice root). Dark-brown or brownish-red, odorless, sweet scales. Freely soluble in water; soluble in alcohol. Taste corrigent; Expectorant and Demulcent, in pectoral affections. **Average Dose:** 4 grains (0.25 Gm.). Incompatible with mineral acids.

GODFREY'S CORDIAL. See Mixture Opium and Sassafras.

Gold Chloride, Squibb

15-grain vial,

$\text{AuHCl}_4 \cdot 4\text{H}_2\text{O}$. Reddish-brown, very deliquescent crystals; approx. 49 percent. gold. Soluble in water, alcohol, ether. Used medicinally as Alterative, mainly in dipsomania and tuberculosis. Used largely in photography. **Dose:** $\frac{1}{60}$ to $\frac{1}{15}$ grain (0.001 to 0.004 Gm.) Keep well protected against air and light.

Gold and Sodium Chloride, Squibb $\frac{1}{8}$ -oz. vial, ; 15-gr. vial,

Auri et Sodii Chloridum. Mixture of equal parts anhydrous gold chloride and sodium chloride, containing 30 percent. gold. Orange-yellow, deliquescent, odorless powder; saline, metallic taste. Soluble freely in water, partially in alcohol. **Average Dose:** $\frac{1}{12}$ grain (0.005 Gm.), in pills or tablets. Keep well stoppered, in dry place. (See also Tablets [Part II].)

GOLD THREAD. See Coptis.

GOLDEN SEAL. See Hydrastis.

GOULARD'S CERATE. See Cerate Lead Subacetate.

Granular Effervescent Salts, Squibb

Grouped for convenience of reference.

Skilfully made products, from purest ingredients, in accurate and proper proportions to secure the best results. They dissolve rapidly with brisk effervescence. For descriptions see respective titles.

Antilithic. See Sodium Phosphate Compound.

Carlsbad Artificial	bottle, lb.	; 4 oz., per doz.
Kissingen Artificial	bottle, lb.	; 4 oz., per doz.
Lithium Citrate	bottle, lb.	; 4 oz., per doz.
Magnesium Citrate	bottle, lb.	; 4 oz., per doz.
Magnesium Sulphate	bottle, lb.	; 4 oz., per doz.
Sodium Phosphate	bottle, lb.	; 4 oz., per doz.
Sodium Phosphate Compound		4 oz., per doz.
Sodium Sulphate	bottle, lb.	; 4 oz., per doz.
Vichy Artificial	bottle, lb.	; 4 oz., per doz.

GRINDELIA.

Grindelia; Gum-plant. Dried leaves and flowering tops of *Grindelia camporum* or *G. cuneifolia* or *G. squarrosa* (Fam. *Compositæ*). Balsamic odor; aromatic, bitter, resinous taste. Antispasmodic, Anticatatarrhal. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

GRIFFITH'S MIXTURE. See Mixture Iron Compound.

GRIFFITH'S PILLS. See Pills Iron Carbonate.

Guaiac Resin, Squibb

Whole

tin, lb.

* Ground for Percolation

tin, lb.

Guaiacum; Guaiac. Resin of wood of *Guaiacum officinale* or of *G. sanctum* (Fam. *Zygophyllaceæ*). Irregular, greenish-gray, brown masses or grayish powder, of balsamic odor and slightly acrid taste. Used as Alterative and Emmenagogue. Average Dose: 15 grains (1 Gm.). (See also Tincture.)

GUAIAAC WOOD.

Guaiaci Lignum, N. F.; *Lignum Vitæ*. Heartwood of *Guaiacum officinale* or of *G. sanctum* (Fam. *Zygophyllaceæ*). Used as Alterative, Emmenagogue. Average Dose: 60 grains (4 Gm.)

⊕ GUAIACOL.

Guaiacol; Methylpyrocatechin. Monomethyl ether of orthodihydroxybenzene, obtained from wood-tar creosote or prepared synthetically. $C_7H_8O_2$. Colorless, crystalline solid; or colorless to yellowish, oily liquid of aromatic odor, sp. gr. 1.110 to 1.114. 1 Gm. dissolves in 53 mils (Cc.) water; 0.8 mil glycerin; miscible with alcohol, ether, chloroform. Antitubercular, Intestinal Antiseptic; topical Antipyretic. Average Dose: (of liquid form): 8 minims (0.5 mil); topically, 15 to 30 minims (1 to 2 mils) with same quantity olive oil or glycerin. (See also Tablets [Part II].).

GUAIACOL BENZOATE. See Benzosol.

⊕ Guaiacol Carbonate, Squibb

bottle, oz.

Guaiacolis Carbonas. $(C_7H_7O)_2CO_3$. White, nearly odorless and tasteless powder. 1 Gm. dissolves in 60 mils (Cc.) alcohol, 1 chloroform, 18 ether; slightly soluble in glycerin; insoluble in water. Antitubercular, Intestinal Disinfectant. Average Dose: 15 grains (1 Gm.). (See also Tablets [Part II].)

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

GUARANA.

Guarana. A dried paste consisting chiefly of crushed seeds of *Paullinia Cupana* (Fam. *Sapindaceæ*), a Brazilian plant. Yields not less than 4 percent. caffeine. Reddish-brown, coarse powder; slight odor; taste astringent, smoky, bitter, then sweetish. Nerve Stimulant, Analgesic, Tonic. **Average Dose:** 30 grains (2 Gm.). (See also Fluidextract.)

Guaranine. See Caffeine.

GUM ARABIC. See Acacia.

GUM BENJAMIN or **GUM BENZOIN.** See Benzoin.

GUTTA PERCHA.

Gutta Percha, N. F. Purified, coagulated, milky exudate of various trees of genus *Palaquium* (Fam. *Sapotaceæ*). Insoluble in water; 90 percent. soluble in chloroform, benzin, oil turpentine.

GUY'S PILLS. See Pills Digitalis, Squill and Mercury.

Halazone. See Tablets, Part II of this book.

HAMAMELIS LEAVES.

Hamamelidis Folia, N. F. Ground dried leaves of *Hamamelis virginiana* (Fam. *Hamamelidaceæ*). Tannin-bearing Astringent. **Average Dose:** 30 grains (2 Gm.). (See also Fluidextract.)

HEDONAL.

Methylpropylcarbinolurethane. White powder, of faint aromatic odor and taste. Soluble readily in alcohol, ether, chloroform; slightly soluble in water. Hypnotic. **Dose:** 15 to 30 grains (1 to 2 Gm.).

HELIANTHEMUM.

Helianthemum, N. F.; Frost-weed. Dried herb of *Helianthemum canadense* (Fam. *Cistaceæ*). Aromatic odor; astringent, bitter taste. Obsolete Astringent, Alterative. **Average Dose:** 1 drachm (4 Gm.).

Hellebore, American or Green. See *Veratrum Viride*.

HELMITOL.

Hexamethylenamine Methylenecitrate. White powder; acidulous taste. Soluble in 10 parts water; almost insoluble in alcohol or ether. Urinary Disinfectant and Acidifier. **Dose:** 10 to 15 grains (0.65 to 1 Gm.).

HELONIAS.

Helonias, N. F.; False Unicorn. Dried rhizome and roots of *Chamælririum luteum* (Fam. *Liliaceæ*). Distinctive odor; bitter, astringent taste. Bitter Tonic; ingredient of "female" remedies. **Average Dose:** 30 grains (2 Gm.).

HEMATOXYLON.

Hæmatoxylon, N. F.; Logwood. Heart-wood of *Hæmatoxylon campechianum* (Fam. *Leguminosæ*). Reddish-brown chips; faint, agreeable odor; sweetish, astringent taste. Intestinal Astringent; Coloring. Colors urine and stools red. Dose: 30 to 60 grains (2 to 4 Gm.).

Hemoglobin, Squibb bottle, lb. ; ¼ lb. ; oz.

Iron-bearing constituent of blood, prepared from fresh ox-blood by removal of serum and careful purification and drying at low temperature. Brownish-red powder; about 0.4 percent. iron. Soluble in water. Dose: 10 to 30 grains, (0.65 to 2 Gm.).

HEMLOCK. See *Conium*.

HEMP CANADIAN. See *Apocynum*.

Henbane. See *Hyoscyamus*.

† **HEROIN.** Brand of Diacetylmorphine.

⊕ **Hexamethylenamine, Squibb**

carton, lb. ; ¼ lb. ; oz.

Hexamethylenamina; Hexamethylene-tetramine; Ammonio-formaldehyde. $C_6H_{12}N_4$. Condensation product of ammonia and formaldehyde. Colorless, almost odorless crystals or powder. Decomposed in acid media, formaldehyde being liberated. 1 Gm. dissolves in 1.5 mils (Cc.) water; 12.5 alcohol; 320 ether; soluble also in chloroform. Useful Urinary Antiseptic; in acid cystitis, typhoid bacilluria, etc. Average Dose: 4 grains (0.25 Gm.), well diluted, or as tablets with a copious draught of water. Often prescribed in conjunction with acid sodium phosphate, where urine is alkaline; given two hours after the phosphate. Incompatible with acids, acid salts, ammonium salts, tannin and mercuric chloride. This chemical is also known by various trade names (Cystogen, Formin, Uritone, Urotropin, Hexamine, Aminoform, etc.). (See also Tablets [Part II].).

HIERA PICRA. See Powder Aloes and Canella.

Hoffmann's Anodyne. See Spirit Ether Compound.

HOLOCAINE HYDROCHLORIDE.

$C_{18}H_{22}N_2O_2.HCl$. Salt of phenetidyl-acetphenetid. Small, colorless, odorless, faintly bitter crystals. Soluble in 50 parts water, freely in alcohol. Local Anesthetic, in 1 percent. solution.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

⊕ HOMATROPINE HYDROBROMIDE.

Homatropinæ Hydrobromidum. $C_{16}H_{21}O_3N.HBr$. White, odorless, bitter, crystalline powder or small prisms. 1 Gm. dissolves in 6 mls (Cc.) water, 40 alcohol, 420 chloroform; insoluble in ether. Mydriatic (1 percent. solution), Antihydrotic and Sedative, like atropine. **Average Dose:** $\frac{1}{120}$ grain (0.0005 Gm.). **Antidotes:** tannin, then emetics; gastric lavage; morphine, pilocarpine, physostigmine, etc.

HONEY.

Mel. Saccharine secretion deposited in honey-comb by the bee, *Apis mellifera* (Fam. *Apidæ*). Nutrient, but used largely pharmaceutically.

HONEY BORAX. See Honey Sodium Borate.

HONEY CLARIFIED.

Mel Depuratum. Honey purified by heating with paper pulp, removing scum, straining and adding 5 percent. glycerin. Used pharmaceutically.

HONEY ROSE.

Mel Rosæ. 100 Gm. contain 12 mls (Cc.) fluidextract rose in clarified honey. Pleasant astringent addition to mouth washes and gargles for inflamed or ulcerated mouth and throat.

HONEY ROSE, WITH BORAX.

Mel Rosæ et Sodii Boratis, N. F. 10 percent. borax, 5 glycerin, 85 rose honey. Antiseptic, Astringent Collutory, especially for children.

HONEY SODIUM BORATE.

Mel Sodii Boratis, N. F.; Honey of Borax. 10 percent. sodium borate, 5 glycerin, 85 clarified honey. Antiseptic Collutory.

HOPE'S MIXTURE. See Mixture Camphor Acid.

HOPS.

Humulus. Dried strobiles of *Humulus Lupulus* (Fam. *Moraceæ*), bearing their glandular trichomes. Strong, valerian-like odor; aromatic, bitter taste. Aromatic Bitter Stomachic. **Average Dose:** 30 grains (2 Gm.).

HORSE-NETTLE BERRIES. See Solanum.

Household Products, Squibb

A line of pure products especially in demand for use in the household. The list comprises:

Baking Powder; Benzoinated Cold Cream; Borax Powdered (Sodium Borate); Castor Oil; Castor Oil Aromatized; Cod Liver Oil; Cold Cream; Cream of Tartar (Potassium Bitartrate); Epsom Salt (Magnesium Sulphate); Extract Vanilla (Tincture Vanilla); Flexible Collodion (Liquid Court Plaster); Fluid Cascara Aromatic (Non-Alcoholic); Glycerin; Magnesia Magma (Milk of Magnesia); Milk Sugar;

Household Products, Squibb (Cont.)

Olive Oil; Rochelle Salt (Potassium and Sodium Tartrate); Sodium Bicarbonate; Sodium Phosphate; Soft Soap; Solution Acid Carbolic Crude; Solution Hydrogen Peroxide; Spices; Talcum Powder; Tarragon Vinegar. For sale by druggists only; grocers do not have them. For descriptions see respective titles.

HYDRANGEA.

Hydrangea, N. F.; Seven-barks. Dried rhizome and roots of *Hydrangea arborescens* (Fam. Saxifragaceæ). Inodorous; taste sweetish, becoming slightly acrid. Cathartic, Diuretic, Diaphoretic. Average Dose: 30 grains (2 Gm.).

Hydrastine, Squibb

15-gr. vial,

Hydrastina. $C_{21}H_{21}O_6N$. While alkaloid from *Hydrastis canadensis*, or prepared synthetically. White or creamy-white crystals or powder. 1 Gm. is soluble in 170 mls (Cc.) alcohol, 1.4 chloroform, 175 ether; almost insoluble in water. Alterative, Bitter Tonic, Uterine Hemostatic. Average Dose: $\frac{1}{6}$ grain (0.01 Gm.), as pills or tablets. [Not to be confounded with the eclectic resinoid "Hydrastin," a brown powder, vastly weaker than hydrastine alkaloid.]

Hydrastine Hydrochloride, Squibb

15-gr. vial,

Hydrastinae Hydrochloridum. $C_{21}H_{21}O_6N.HCl$. White to creamy-white, odorless, hygroscopic, bitter powder. Soluble freely in water or alcohol; slightly in chloroform; very sparingly in ether. Astringent, Hemostatic, Bitter Tonic; largely used externally ($\frac{1}{10}$ to $\frac{1}{2}$ percent. solution or 1 percent. ointment), in gonorrhea, conjunctivitis, skin diseases, etc. Dose: as hydrastine alkaloid. Incompatible with alkalies, borax, tannic acid, in solution.

⊕ Hydrastinine Hydrochloride, Squibb

15-gr. vial, ; 10-gr. vial, ; 5-gr. vial,

Hydrastinine Hydrochloridum. $C_{11}H_{11}O_2N.HCl$. Hydrochloride of an artificial alkaloid obtained by oxidation of hydrastine. Light-yellowish, odorless, very bitter, crystalline powder. 1 Gm. dissolves in 195 mls (Cc.) chloroform, 1820 ether; very soluble in water or alcohol. Uterine Hemostatic, Vaso-constrictor; chiefly in uterine hemorrhage and congestion. Average Dose: $\frac{1}{2}$ grain (0.03 Gm.).

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

HYDRASTIS.

Hydrastis; Golden Seal; Yellow Puccoon; Yellow Root. Dried rhizome and roots of *Hydrastis canadensis* (Fam. *Ranunculaceæ*). Assays not less than 2.5 percent. ether-soluble alkaloids. Bitter Tonic, Astringent. Average Dose: 30 grains (2 Gm.). (See also Fluidextract; Tincture.)

Hydrogen Peroxide. See Solution Hydrogen Peroxide.

⊕ **Hyoscine Hydrobromide.** Identical with Scopolamine Hydrobromide, which see.

HYOSCYAMINE HYDROBROMIDE CRYSTALS.

Hyoscyaminæ Hydrobromidum. $C_{17}H_{23}O_3N.HBr$. White, nearly odorless crystals; nauseous, bitter taste. 1 Gm. dissolves in 2.5 mls (Cc.) alcohol, 1.7 chloroform; very soluble in water. Average Dose: $\frac{1}{200}$ grain (0.0003 Gm.). Antidotes: tannin, emetics; morphine, pilocarpine or physostigmine.

⊕ **Hyoscyamus, Squibb**

Ground for Percolation tin, lb. ; $\frac{1}{4}$ lb.

Hyoscyamus. Dried leaves and flowering or fruiting tops of *Hyoscyamus niger* (Fam. *Solanaceæ*), yielding not less than 0.065 percent. alkaloids. Antispasmodic, Sedative, Analgesic. Average Dose: 4 grains (0.25 Gm.). (See also Extract; Fluidextract; Tincture.)

⊕ **HYPOPHYSIS DESICCATED.**

Hypophysis Sicca; Desiccated Pituitary Body. Newly official. Posterior lobe of pituitary body of cattle cleaned, dried and powdered. Yellowish or grayish, amorphous powder; characteristic odor. Partially soluble in water. Stimulant to unstriated muscle, Vaso-constrictor, Parturient, Hemostatic; in second stage of labor, uterine atony, postpartum hemorrhage, shock, etc. Average Dose: $\frac{1}{2}$ grain (0.03) Gm.). (See also Solution.)

ICHTHALBIN.

Ichthyol Albuminate. Gray-brown, odorless, almost tasteless powder, insoluble in ordinary solvents; 75 percent. ichthyol. Alterative, Anticatarrhal, Vulnerary; used chiefly in place of ichthyol internally. Dose: 5 to 30 grains (0.3 to 2 Gm.). Externally pure.

ICHTHARGAN.

Ichthyol-silver; Silver Sulphoichthyolate. Brown, nearly inodorous powder; 30 percent. silver, 15 percent. sulphur organically combined. Soluble in water, diluted alcohol, glycerin; insoluble in chloroform, ether. Astringent, Antiseptic, Antigonorrhœic; mostly externally in $\frac{1}{2}$ to 3 percent. solution, 1 to 10 percent. ointment, or pure. Dose: $\frac{1}{16}$ to $\frac{1}{4}$ grain (0.004 to 0.015 Gm.), in solution. Dispense solutions in dark vials.

ICHTHOFORM.

Ichthyol-formaldehyde. Blackish-brown, nearly odorless and tasteless, insoluble powder. Intestinal Antiseptic and Antiphlogistic, chiefly; also Vulnerary (pure or mixed with talcum, etc.). **Dose:** 10 to 30 grains (0.65 to 2 Gm.).

⊕ ICHTHYOL.

Ammonium Sulphoichthyolate. Distillate of a bituminous shale, found near Seefeld in Tyrol, containing about 10 percent. total sulphur, 55 percent. of which is organic. Brown, thick liquid, of bituminous odor and taste. Soluble in water; insoluble in alcohol or ether; miscible but not soluble in glycerin and oils. Antiphlogistic, Astringent, Alterative. Used chiefly in skin and gynecological diseases, pure or 5 to 50 percent. ointment, glycerin suspension, etc.; internally, in phthisis, rheumatism, nephritis, scrofula, etc. **Dose:** 3 to 30 minims (0.2 to 2 mls [Cc.]), in pills or capsules. Gives precipitates with metallic salts, acids or alkaloidal salts; decomposed by alkaline hydrates and carbonates, and by iodine in ointment form. For deodorizing ichthyol the addition of 2 percent. each of oil bergamot and oil eucalyptus has been recommended. Its stains are removed by boiling the fabric in soap and water, or by washing with soft soap or soap spirit.

IGNATIA.

Ignatia, N. F.; Saint Ignatius Beans. Dried ripe seeds of *Strychnos Ignatii* (Fam. *Loganiaceæ*), yielding not less than 2 percent. alkaloids. Nearly inodorous; intensely bitter. Action same as of *nux vomica*. **Average Dose:** 1 grain (0.065 Gm.).

Indicators. See under Reagents, etc. (Part IV).

INFUSION BRAYERA.

Infusum Brayeræ, N. F. 6 Gm. brayera to 100 mls (Cc.). Anthelmintic. **Average Dose:** 8 fluidounces (240 mls [Cc.]).

INFUSION CINCHONA.

Infusum Cinchonæ, N. F. Each 100 mls (Cc.) represents 6 Gm. cinchona, 1 mil aromatic sulphuric acid. **Average Dose:** 12 fluidrachms (45 mls [Cc.]).

INFUSION DIGITALIS.

Infusum Digitalis. 1.5 Gm. digitalis, 15 mls (Cc.) cinnamon water, in 100 mls. Must be made fresh as wanted. **Average Dose:** 1 fluidrachm (4 mls).

INFUSION GENTIAN COMPOUND.

Infusum Gentianæ Compositum, N. F. 100 mls (Cc.) represent 3 Gm. gentian, 0.8 Gm. each coriander and bitter-orange peel. Bitter Tonic, Appetizer. **Average Dose:** 4 fluidrachms (16 mls [Cc.]).

This house supplies only one quality of each produc.: that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

INFUSION ROSE COMPOUND.

Infusum Rosæ Compositum, N. F. 100 mls (Cc.) represent 1.3 Gm. red rose, 0.9 mil diluted sulphuric acid, 4 Gm. sugar. Refrigerant, Astringent; Vehicle for saline cathartics. Average Dose: 3 fluidounces (90 mls).

INFUSION SENNA COMPOUND.

Infusum Sennæ Compositum. 100 mls (Cc.) represent 6 Gm. senna, 12 Gm. each manna and magnesium sulphate, 2 Gm. fennel as corrigent. Laxative. Average Dose: 4 fluidounces (120 mls). Should be freshly prepared.

INFUSION WILD CHERRY.

Infusum Pruni Virginianæ, N. F. 100 mls (Cc.) represent 4 Gm. wild cherry, 5 mls glycerin. Bitter Tonic. Average Dose: 2 fluidounces (60 mls [Cc.]).

INFUSORIAL EARTH. See Silica.

Inhaler, Dr. Ferguson's, for the Administration of Ether, Chloroform, Ethyl Chloride, Ethyl Bromide or anyone of the so-called Mixtures, by the Open Drop Method.

FIG. 1.

This instrument, invented by Dr. Robert H. Ferguson, of Boston, Mass., is intended to administer only air saturated with ether vapor, in but the quantity necessary to produce and maintain surgical anæsthesia, although the most profound narcosis may be had with it if desired. It consists of a wire frame, part of which is very flexible, which for use should be fitted accurately to the face of the patient so as to admit no air between the inhaler and the face. Over the convex diaphragm enough gauze is stretched to hold the ether during vaporization but in no way to limit the air for respiration, see Fig. 2. Onto this gauze ether is dropped only as fast as it will evaporate. In order to prevent the dissipating of the vapor, the frame is covered with a Canton flannel hood which does not encroach upon the opening for the face and

FIG. 2.

FIG. 3.

which is drawn up on top so as to leave an opening that will admit at least twice as much air as the patient can use for normal breathing. Through this opening (see Fig. 1), the ether is dropped onto the gauze. This inhaler does not cover or in any other way interfere with the

Inhaler (Cont.)

eyes, and forcible closure of the jaws is not possible as it cannot go below the chin. It can be bent in any way required and thus made to fit any adult or juvenile face; but no fitting to the face of a very young child or infant is necessary since they require only very small amounts of ether vapor. Fig. 1 pictures the inhaler arranged for the administration of ether, ethyl chloride or ethyl bromide, with or without oxygen. For administering ether with the patient turned completely on the side or so it looks downward, a special hood with the only opening in the side should be used (Fig. 3). For a further description of the Ferguson Mask see the article by Dr. Ferguson in the *Jour. Amer. Med. Assn.*, 1905, Dec. 30. A reprint of this paper revised by the author in 1909 may be secured free by addressing us. Full directions for use accompany each instrument, which is put up in a neat box with gauze and four hoods (two for the supine position and one for the right lateral and one for the left lateral position). The instrument is small, light, simple, durable, inexpensive, and can easily be kept sterile. Price: Complete, \$2.50. Single hoods for either position, each 20c.

INULA.

Inula, N. F. Dried rhizome and roots of *Inula Helenium* (Fam. *Compositæ*). Aromatic odor; acrid, bitter, pungent taste. Expectorant. Average Dose: 30 grains (2 Gm.).

INUNCTION MENTHOL.

Inunctum Mentholis, N. F. 5 percent. menthol in wool-fat. Counter-irritant, Analgesic.

INUNCTION MENTHOL COMPOUND.

Inunctum Mentholis Compositum, N. F. 5 percent. menthol, 10 percent. methyl salicylate, in wool-fat. Counter-irritant, Analgesic.

IODALBIN.

Compound of iodine (21.5 percent.) with blood albumin. Reddish powder, nearly tasteless, of peculiar odor. Soluble in alkali solutions; insoluble in ordinary solvents. Succedaneum for alkali iodides. Dose: 5 to 15 grains (0.3 to 1 Gm.).

Iodine Resublimed, Squibb

g. s. bottle, oz.

Iodum. Heavy, bluish-black, friable plates, of metallic luster, distinctive odor, and sharp, acrid taste. Sp. gr. about 4.948. 1 Gm. dissolves in 2950 mls (Cc.) water, 12.5 alcohol, 80 glycerin; freely in ether or chloroform; in solutions alkali iodides. Discutient and Counter-irritant externally; Alterative internally. Average Dose: $\frac{1}{12}$ grain (0.005 Gm.), in dilute

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Iodine Resublimed, Squibb (Cont.)

solution. Applied externally as tincture, ointment, etc. Incompatible with alkalis, alkali carbonates, alkaloidal salts, tannin and tannin-bearing preparations, etc. **Antidotes:** starchy food in abundance; emetics. (See also Tincture; Reagents [Part IV].)

IODIPIN.

Iodine addition products of fatty acids of sesame oil; 10 and 25 percent. iodine respectively. Yellow, to brownish-black, thick, oily liquids. Alternative, like alkali iodides. **Dose:** 10%, 1 to 2 fluidrachms (4 to 8 mils [Cc.]); 20%, 30 to 90 minims (2 to 6 mils).

ODOCHLOROXYQUINOLINE. See Vioform.

ODOFORM, AROMATIZED.

Iodoformum Aromatisatum, N. F. Iodoform with 4 percent. coumarin.

⊕ Iodoform Powdered, Squibb

bot., lb. ; ¼ lb. ; oz. ; ⅛ oz.

Iodoformum; Formyl Triiodide; Triiodomethane. CHI_3 . Repurified, precipitated article of exceptional purity and excellence; we continue the purification beyond the stage when the product is of the purity of the regular market article. Fine powder, much lighter and less gritty than ordinary iodoform (which is composed of minute crystal fragments), and preferable as a dressing for wounds and suppurating sores, and for making ointments, pills, etc. About twice as bulky as ordinary iodoform, hence does not require as much to cover any surface. 1 Gm. dissolves in 60 mils (Cc.) alcohol, 80 glycerin, 10 chloroform, 7.5 ether, 34 olive oil; nearly insoluble in water. Wound Antiseptic, Alternative, Antitubercular. **Average Dose:** 4 grains (0.25 Gm.) in coated pills. Applied pure, in ointments, paints, solutions, etc. Incompatible with calomel, silver salts, chlorates and nitrites. **Antidotes:** emetics; sodium bicarbonate, potassium acetate; chloral hydrate; morphine hypodermically. Keep well-stoppered, in cool place, protected from light.

IODOTHYRINE.

Thyroidine. Lactose trituration of supposed active principle of thyroid gland; 1 Gm. contains 0.0003 Gm. iodine, and represents 1 Gm. fresh thyroid. Yellowish-white, sweetish powder. Alternative and Anticachectic. **Dose:** 5 to 10 grains (0.3 to 0.65 Gm.).

IOTHION.

Diiodohydroxypropane. Yellowish, oily liquid, sp. gr. 2.4 to 2.5; 77 percent. iodine. Soluble in glycerin, oils, alcohol, ether, chloroform; insoluble in water. Incompatible with alkalis. Substitute for iodine and iodides for endermic medication. Applied in 25 to 50 percent. ointments, or 5 to 25 percent. solutions in olive oil.

⊕ **Ipecac, Squibb**

Powdered for Percolation tin, lb. ; ¼ lb.

Ipecacuanha; Ipecac Root. Dried root of *Cephaelis Ipecacuanha* (Rio Ipecac) or of *C. acuminata* (Carthagenia Ipecac) (Fam. *Rubiaceæ*), assaying not less than 1.75 percent. ether-soluble alkaloids. Odor slight; taste bitter, nauseous, somewhat acrid; powder sternutatory. Expectorant, Emetic, Antamebic; Stomachic. Average Dose: expectorant, etc., 1 grain (0.065 Gm.); emetic, 15 grains (1 Gm.). (See also Fluid-extract; Syrup.)

IRIS. See Orris Root.

IRIS VERSICOLOR. See Blue Flag.

IRISH MOSS. See Chondrus.

⊕ **Iron Reduced, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Ferrum Reductum; Iron by Hydrogen; Quevenne's Iron. Fine, steel-gray, lustrous powder, containing not less than 90 percent. Fe. Hematinic; also Reagent. Average Dose: 1 grain (0.065 Gm.), in pills or tablets.

Iron Albuminate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Brown, water-soluble scales, containing 25 percent. ferric oxide as albuminate. Hematinic. Dose: 3 to 5 grains (0.2 to 0.3 Gm.). Also used for conveniently preparing Solution Iron Albuminate N. F.

Iron by Hydrogen. See Iron, Reduced.

Iron Cacodylate Ampuls. See Ampuls.

Iron Carbonate Mass. See Mass Ferrous Carbonate.

Iron Carbonate, Precipitated. See Iron Subcarbonate.

Iron Carbonate Saccharated, Squibb

bottle, lb. ; ¼ lb.

Ferri Carbonas Saccharatus. 15 percent. FeCO_3 . Greenish-brown powder; odorless; sweetish then slightly ferruginous taste. Partially soluble in water. Chalybeate Tonic. Average Dose: 4 grains (0.25 Gm.). Keep well stoppered.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

⊕ **Iron Chloride (Ferric), Squibb** g. s. bottle, oz.

Ferri Chloridum; Ferric Chloride; Iron Per-~~a~~ Tri-, or Sesquichloride. $\text{FeCl}_3 \cdot 6\text{H}_2\text{O}$. Crystalline, deliquescent pieces, of orange-yellow color and slightly styptic taste, and upon solution and testing giving no evidence of oxychloride. Contains not less than 20 percent. iron. 1 Gm. dissolves in 0.2 mil (Cc.) water; freely soluble in alcohol; also soluble in glycerin or ether. Styptic, Hematinic. **Average Dose:** 1 grain (0.065 Gm.). Keep securely stoppered. (See also Reagents [Part IV].)

IRON CITRATE GREEN.

A modification of U. S. P. Iron and Ammonium Citrate, containing slightly less iron, and more citric acid and ammonium citrate than does latter and acid in reaction. The Council on Pharmacy and Chemistry, of the American Medical Association, holds that the lower content of iron, as well as the acidity of the green salt would appear to be detriments rather than advantages. We have, therefore, discontinued its manufacture and no longer supply the ampuls formerly furnished.

Iron Cyanide. See Iron Ferrocyanide.

Iron Ferrocyanide, Squibb

bottle, lb. ; ¼ lb. ; oz.

Ferric Ferrocyanide: Insoluble Prussian or Berlin Blue; Insoluble Iron "Cyanide." $\text{Fe}_4\text{Fe}_3(\text{CN}_6)_3$. Dark-blue powder. Insoluble in ordinary solvents and dilute acids. **Dose:** 2 to 5 grains (0.13 to 0.3 Gm.).

Iron Glycerophosphate, Squibb

bottle, ; ¼ lb. ; oz.

Ferri Glycerophosphas, N. F. Greenish-yellow, odorless, nearly tasteless scales, containing a variable quantity of $\text{Fe}_2(\text{C}_3\text{H}_7\text{O}_6\text{P})_3$, corresponding to not less than 14 to 16 percent. Fe. Slowly soluble in water; insoluble in alcohol. Used as Hematinic, Nervine. **Average Dose:** 3 grains (0.2 Gm.), in tablets or pills.

Iron Hydroxide with Magnesium Oxide. See Antidote, Arsenic.

Iron Hypophosphite, Squibb bottle, ¼ lb. ; oz.

Ferri Hypophosphis, N. F. $\text{Fe}(\text{PH}_2\text{O}_2)_3$. White or grayish-white, odorless, nearly tasteless powder. Soluble in about 2300 mls (Cc.) water, more readily in presence of hypophosphorous acid or alkali citrate. Hematinic. **Average Dose:** 3 grains (0.2 Gm.).

IRON LACTATE.

Ferri Lactas, N. F. $\text{Fe}(\text{C}_3\text{H}_5\text{O}_3)_2 \cdot 3\text{H}_2\text{O}$. Greenish-white powder or masses; slight odor; mild, sweet, ferruginous taste. 1 Gm. dissolves slowly in 40 mls (Cc.) water; soluble in solutions alkali citrates; almost insoluble in alcohol. Hematopoietic. **Average Dose:** 5 grains (0.3 Gm.).

Iron Lactophosphate, Squibb

bottle, lb. ; ¼ lb. ; oz. -

Greenish-white powder. Soluble in acidulated water. Contains about 44 percent. ferrous lactate and 56 percent. ferric phosphate. Hematinic, Alterative. **Dose:** 2 to 5 grains (0.13 to 0.5 Gm.).

IRON MALATE CRUDE. See Extract Apples Ferrated.

Iron Oxide Saccharated, Squibb bottle, lb. ; ¼ lb.

Ferri Oxidum Saccharatum, N. F.; Soluble Ferric Oxide; "Eisenzucker"; Iron Sugar. Reddish-brown powder; 2.8 percent. iron. Soluble in water. Mild Chalybeate. **Dose:** 10 to 20 grains (0.65 to 1.3 Gm.).

Iron Peptonate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Brown, shining, odorless granules, containing about 25 percent. ferric oxide as peptonate. Nonstringent, easily assimilated Hematinic. **Dose:** 2 to 5 grains (0.13 to 0.3 Gm.). Convenient and very satisfactory for making *Liquor Ferri Peptonati* and *Liquor Ferri Peptonati et Mangani*. It yields perfectly clear, brilliant, palatable, and well-keeping preparations. Write for working formulas. (See also Solution Iron Peptonate; Solution Iron Peptonate and Manganese; Solution Iron Peptonate and Manganese, with Arsenic.)

Iron Peptonate and Manganese, Squibb

bottle, lb. ; ¼ lb. ; oz.

Yellowish-brown, freely soluble scales; 10 percent. iron and 3.5 percent. manganese. Especially designed for convenient preparation of Solution Iron Peptonate and Manganese; 35 Gm. suffice to make 1000 mls (Cç.).

Iron Per-, Sesqui-, or Tri-chloride. See Iron Chloride, Ferric.

Iron Phenolsulphonate, Squibb

bottle, oz.

Iron Sulphocarbolate. Highly pure; free from sulphates, chlorides and foreign metals. Readily soluble in water. Used as Intestinal Antiseptic and Astringent. **Dose:** 3 to 10 grains (0.2 to 0.65 Gm.).

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

⊕ Iron Phosphate, Squibb

tin, lb. ; ¼ lb. ; oz.

Ferri Phosphas; Iron Phosphate Soluble. Ferric Phosphate rendered soluble by sodium citrate. Slightly acid, green scales, containing not less than 12 percent. iron. Freely soluble in water; insoluble in alcohol. Hematinic, only slightly astringent. Incompatible with acids, alkali carbonates and tannin-containing preparations. **Average Dose:** 4 grains (0.25 Gm.)

Iron Pyrophosphate, Squibb

tin, lb. ; ¼ lb. ; oz.

Ferri Pyrophosphas, N. F.; Iron Pyrophosphate with Sodium Citrate. Apple-green, odorless scales; acidulous, slightly saline taste; 10 percent. Fe. Freely soluble in water; insoluble in alcohol. Hematinic; used largely in elixirs. **Average Dose:** 4 grains (0.25 Gm.).

Iron Subcarbonate, Squibb

carton, lb. ; ¼ lb.

Ferri Subcarbonas, U. S. P. 1870; Iron Carbonate Precipitated. Consists chiefly of hydrated oxide, with small quantities of ferrous carbonate. Reddish-brown, odorless, tasteless powder. Insoluble in ordinary organic solvents. Hematinic. **Dose:** 5 to 10 grains (0.3 to 0.65 Gm.).

Iron Subsulphate, Squibb

bottle, ¼ lb. ; oz.

Basic Ferric Sulphate; Monsel's Salt. $\text{Fe}_4\text{O}(\text{SO}_4)_5$. Light, reddish-brown, deliquescent powder; readily soluble in water, less irritating than normal ferric sulphate because of its deficiency in sulphuric acid, and possesses greater astringency. Astringent, Styptic, Hemostatic. **Dose:** 2 to 5 grains (0.13 to 0.3 Gm.). Keep in dry place.

Iron Sugar. See Iron Oxide Red, Saccharated.

⊕ Iron Sulphate (Cryst.), Squibb

bottle, lb. ; ¼ lb.

Ferri Sulphas; Ferrous Sulphate; Iron Protosulphate; Green Vitriol. $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$. Well-crystallized, and not less than 99.5 percent. pure. The crystals show no efflorescence and are free from uncombined acid and alkali metals. Bluish-green prisms; odorless, and of saline, styptic taste; efflorescent in dry air, and rapidly oxidizing on exposure to moist air, becoming coated with brownish-yellow basic ferric sulphate. 1 Gm. dissolves in 1.4 mils (Cc.) water; insoluble in alcohol. Chalybeate Tonic, Astringent. **Average Dose:** 11½ grains (0.1 Gm.). Keep well stoppered, in cool dry place. (See also Reagents [Part IV], under Ferrous Sulphate).

⊕ **Iron Sulphate Dried, Squibb** bottle, lb. ; ¼ lb.

Ferri Sulphas Exsiccatus; Dried Ferrous Sulphate. Ferrous Sulphate deprived of its water by efflorescence and heating, whereby it loses 35 percent. of its weight. Grayish-white powder, completely soluble in water. Preferred to crystalline salt for administration in pill form. Average Dose: 1 grain (0.065 Gm.).

Iron Sulphate Granulated, Squibb

bottle, lb. ; ¼ lb.

Ferri Sulphas Granulatus. $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$. Pale-green, crystalline powder. Convenient form of ferrous sulphate for dispensing purposes. Action and dose, as iron sulphate crystals.

Iron Sulphocarbolate. See Iron Phenolsulphonate.

⊕ **Iron and Ammonium Citrate, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Ferri et Ammonii Citras; Soluble Iron Citrate; Ammonio-ferric Citrate. Garnet-red scales; odorless, saline, mildly ferruginous taste. Readily and completely soluble in water; insoluble in alcohol. Contains equivalent of not less than 16 percent. metallic iron. Hematinic. Average Dose: 4 grains (0.25 Gm.). Incompatible with mineral acids, vegetable astringent infusions, decoctions, etc.

Iron and Ammonium Sulphate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Ferri et Ammonii Sulphas, U. S. P. VIIIth Rev.; Ferric Ammonium Sulphate. $\text{FeNH}_4(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$. Violet, efflorescent, styptic crystals. 1 Gm. dissolves in about 3 mls (Cc.) water; insoluble in alcohol. Hematinic, Astringent, Styptic. Average Dose: 8 grains (0.5 Gm.). (See also Reagents [Part IV] under Ferric Ammonium Sulphate.)

Iron and Ammonium Tartrate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Ferri et Ammonii Tartras, U. S. P. VIIth Rev. Garnet-red to reddish-brown, odorless scales; 13 percent. metallic iron. Very soluble in water; insoluble in alcohol. Non-astringent Chalybeate Tonic. Average Dose: 4 grains (0.25 Gm.).

Iron and Manganese Peptonate. See Iron Peptonate and Manganese.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

Iron and Potassium Tartrate, Squibb

tin, lb. ; ¼ lb. ; oz.

Ferri et Potassii Tartras, U. S. P. VIIth Rev. Garnet-red to reddish-brown, odorless scales, of sweetish, ferruginous taste; 15 percent. metallic iron. Soluble freely in water; insoluble in alcohol. Non-astringent Hematinic. Average Dose: 4 grains (0.25 Gm.).

Iron and Quinine Citrate (Soluble), Squibb

bottle, lb. ; ¼ lb. ; oz.

Ferri et Quininae Citras. The new U. S. P. has adopted this soluble salt and dropped the regular, difficultly soluble salt. Contains not less than 11.5 percent. anhydrous quinine and 13 percent. iron. Greenish or golden-yellow scales; odorless; bitter, ferruginous taste; slightly deliquescent. Bitter and Chalybeate Tonic, Antiperiodic. Average Dose: 4 grains (0.25 Gm.).

Iron, Quinine and Strychnine Citrate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Greenish, very bitter scales; 0.9 to 1 percent. strychnine. Soluble in water. Tonic; in anemia, chlorosis, convalescence, etc. Dose: 2 to 5 grains (0.13 to 0.3 Gm.).

Iron and Strychnine Citrate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Formerly official. Readily soluble, garnet-red scales; 0.9 to 1 percent. strychnine and 16 percent. iron. Nerve Tonic, Chalybeate, Antiperiodic. Ordinary Dose: 2 grains (0.13 Gm.).

⊕ *Jaborandi*. See *Pilocarpus*.

JACKSON'S PECTORAL SYRUP. See Syrup Morphine and Acacia.

⊕ Jalap, Squibb

* Ground for Percolation

tin, lb.

Powdered

tin, lb. ; ¼ lb.

Jalapa. Dried tuberous root of *Exogonium Purga* (Fam. *Convolvulaceæ*). Assays not less than 7 percent. total resin. Smoky, sweetish odor; sweetish, acrid taste. Hydragogue Cathartic, especially in dropsies; less irritant than other resinous cathartics. Average Dose: 15 grains (1 Gm.). Acts in 3 hours. (See also Extract; Powder; Resin.)

JAMESTOWN WEED. See *Stramonium*.

JANEWAY'S PILLS. See Pills Aloes and Podophyllum Compound.

JUGLANS.

Juglans, N. F.; Butternut Bark. Dried inner bark of roots of *Juglans cinerea* (Fam. *Juglandaceæ*). Cathartic. Average Dose: 60 grains (4 Gm.).

JUNIPER BERRIES.

Juniperus, N. F. Dried ripe fruit of *Juniperus communis* (Fam. *Pinaceæ*). Odor aromatic; taste sweet, pleasant, terebinthinate, slightly bitter. Irritant Diuretic. Average Dose: 60 grains (4 Gm.). (See also Fluidextract.)

Kaolin, Medicinal, Squibb

carton, lb.

Kaolinum, N. F. Offered in response to the demand from physicians for a pure, finely powdered, sterilized product, for internal use. Native aluminum silicate ($H_2Al_2Si_2O_8$). Grayish-yellow, fine powder; clay-like taste and odor; almost insoluble in ordinary solvents. Purified, dried and sterilized. Specially intended for medicinal use, as absorbent and eliminant of pathogenic bacteria in diphtheria, typhoid fever, intestinal tuberculosis; also used as dusting powder in wounds and skin diseases, for clarifying liquids, and as pill-excipient for potassium permanganate, gold chloride and silver nitrate. Dose: 8 to 16 heaping teaspoonfuls one to three times daily, on empty stomach, suspended in a little water or oatmeal gruel. Topically, for removing bacilli from throat, one-third teaspoonful is swallowed as slowly as possible every ten to fifteen minutes during the day until bacilli have completely disappeared.

Kaolin Poultice. See Cataplasm Kaolin.**KAVA.**

Kava, N. F.; Kava Kava. Dried rhizome of *Piper methysticum* (Fam. *Piperaceæ*). Odor faint but characteristic; taste aromatic, pungent, slightly bitter. Mild Diuretic, Genito-urinary Stimulant; similar to cubeb. Average Dose: 15 grains (1 Gm.).

KELENE. Brand of Ethyl Chloride.**KERMES MINERAL.** See Antimony Sulphurated.**KIESELGUHR.** See Silica.**KINO.**

Kino. Spontaneously dried juice of *Pterocarpus Marsupium* (Fam. *Leguminosæ*). Reddish-brown to reddish-black, brittle, odorless fragments; astringent taste. Slightly soluble in water; almost completely in alcohol; nearly insoluble in ether. Intestinal and Pharyngeal Astringent. Average Dose: 8 grains (0.5 Gm.). (See also Tincture.)

KOLA.

Kola, N. F.; Cola. Dried cotyledons of several species of *Cola* (Fam. *Sterculiaceæ*), yielding not less than 1.5 percent. caffeine. Odorless; slightly astringent taste. Stimulant, Muscle-invigorator. Average Dose: 60 grains (4 Gm.).

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

KOUSSO. See *Brayera*.

Krameria, Squibb

Ground for Percolation

tin, lb.

Krameria, N. F.; *Rhatany*. Dried root of *Krameria triandra*, *K. Ixina*, and *K. argentea* (Fam. *Krameriaceæ*). Powerful Astringent; chiefly in diarrhea. Average Dose: 15 grains (1 Gm.). (See also Extract; Fluidextract; Syrup; Troches [Part II].)

KUMYSS.

Lac Fermentatum, N. F. Sweetened cow's milk fermented with yeast. Refrigerant Nutritive. Average Dose: 8 fluidounces (240 mls [Cc.]).

LACTOPHENIN.

Lactylparaphenetidin. $C_6H_4OC_2H_5NH.COCH.OH.CH_3$. Colorless, odorless, faintly bitter powder. Soluble in 8.5 parts alcohol, 330 water. Antipyretic, Analgesic. Dose: 8 to 15 grains (0.5 to 1 Gm.).

Lactose. See Sugar of Milk.

LACTUCARIUM.

Lactucarium. Dried milk-juice of *Lactuca virosa* (Fam. *Compositæ*). Irregular, grayish-brown pieces; opium-like odor; bitter taste. Partially soluble in alcohol or ether; practically insoluble in water. Nerve Sedative, Anodyne; in nervousness, irritative cough, etc. Average Dose: 15 grains (1 Gm.).

LADIES' SLIPPER. See *Cypripedium*.

LADY WEBSTER'S DINNER PILLS. See Pills Aloes and Mastic.

LAFAYETTE MIXTURE. See Mixture Copaiba.

LAMOTTE'S DROPS. See Tincture Iron Chloride Ethereal.

Lanolin. See Wool-fat.

LAPPA.

Lappa, N. F.; *Burdock*. Dried root of *Arctium Lappa* (Fam. *Compositæ*). Slight odor; taste mucilaginous, sweetish, slightly bitter. Used as Alterative. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

⊕ **LARD.**

Adeps. Purified internal fat of abdomen of hog (*Sus scrofa*). Insoluble in water; very slightly soluble in alcohol, readily in ether or chloroform.

⊕ **Lard Benzoinated, Squibb**

tin, lb.

Adeps Benzoinatus. Pure lard carefully benzoinated with 1 percent. Siam gum benzoin. Mildly Antiseptic. Emollient; Ointment Base. Liable to granulate on keeping; store in a very cool place.

LARKSPUR SEED.

Delphinium, N. F. Dried seeds of *Delphinium Consolida* or of *D. Ajacis* (Fam. *Ranunculaceæ*). Faint odor; bitter then biting and acrid taste. Antiparasitic. (See also Fluidextract.)

LAROSAN.

Casein-Calcium. Light, white, almost odorless and tasteless powder. Soluble in water. Addition to milk taken by infants suffering with diarrhea.

LASSAR'S DERMATOLOGIC PASTES. See under Paste.

Laudanum. See Tincture Opium.

Lavender Compound Ground, Squibb tin, lb.

A mixture of the ground drugs Saigon cinnamon, cloves, nutmeg and red saunders, in the proportions called for in U. S. P. formula for Tincture Lavender Compound.

⊕ Lead Acetate, Squibb tin, lb. ; ¼ lb.

Plumbi Acetas; Sugar of Lead, $Pb(C_2H_3O_2)_2 \cdot 3H_2O$. Made by a special process devised in the Squibb Laboratories and which produces an exceedingly pure article, far superior to that commonly offered. Colorless, granular crystals, of faintly acetous odor, and sweetish, astringent, metallic taste; efflorescent and absorbing carbon dioxide on exposure. 1 Gm. dissolves in 1.4 mls (Cc.) water, 38 alcohol, 5 glycerin. Astringent, Styptic; in conjunctivitis, gonorrhea, ivy poisoning, diarrhea, gastric hemorrhage, etc. Average Dose: 1 grain (0.065 Gm.). Incompatible with acids, tannin, vegetable astringent infusions and tinctures, carbonates, hydroxides, iodides, chlorides, sulphates, etc. Antidotes: sodium or magnesium sulphate, emetics; white of egg; demulcents. (See also Reagents [Part IV].)

LEAD CARBONATE.

Plumbi Carbonas, N. F.; White Lead. Mixture of lead carbonate and hydroxide. Heavy, white, odorless, tasteless powder. Insoluble in ordinary solvents. External Antiseptic; as dusting powder, ointment, etc.

LEAD IODIDE.

Plumbi Iodidum, N. F.; PbI_2 . Dropped from U. S. P. Heavy, yellow powder; odorless and tasteless. 1 Gm. dissolves in about 1300 mls (Cc.) water; soluble in fixed alkali solutions, slightly in alcohol. Discutient, Alterative; externally in 10 to 20 percent. ointments, in indolent ulcers, swollen glands, etc.; internally in scrofula, phthisis, etc. Dose: 1/2 to 1 grain (0.03 to 0.065 Gm.)

Lead Oxide Red, Reagent. See Reagents (Part IV).

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

LEAD OXIDE, YELLOW.

Plumbi Oxidum; Litharge. PbO . Heavy, reddish-yellow, odorless, tasteless powder. Insoluble in ordinary solvents. Used pharmaceutically and technically. (See also Reagents [Part IV].)

Lead Peroxide Reagent. See Reagents (Part IV).

LEMON PEEL.

Limonis Cortex. Outer rind of fresh ripe fruit of *Citrus medica Limonum* (Fam. *Rutaceæ*). (See also Tincture.)

LEPTANDRA.

Leptandra, N. F.; Culver's Root. Dried rhizome and roots of *Veronica virginica* (Fam. *Scrophulariaceæ*). Slight odor; taste bitter, slightly acrid. Cathartic, similar to podophyllum. Average Dose: 15 grains (1 Gm.). (See also Extract)

Licorice Root Powdered, See Glychrrhiza.

LIFE ROOT. See Senecio.

LILY OF THE VALLEY FLOWERS. See Convallaria Flowers.

LILY OF THE VALLEY ROOT. See Convallaria Root.

⊕ Lime, Squibb

bottle, lb.

Calx; Calcium Oxide; Quicklime; Burnt Lime. A well-burnt article, satisfactorily free from carbonate, containing no more than allowable impurities, and of not less than 95 percent. CaO . Hard, white, or grayish-white masses, on exposure attracting moisture and carbon dioxide and falling to a white powder; odorless; caustic taste. 1 Gm. dissolves in 840 mls (Cc.) water; soluble also in glycerin and syrup; insoluble in alcohol. With about half its weight of water it becomes heated and converted into calcium hydroxide (slaked lime). Antacid, Caustic, Depilatory. Given internally as lime water or syrup lime usually. Applied externally (to cancers, old ulcers, etc.) in substance or 25 percent. paste. Keep bottle securely stoppered and in a dry place. (See also Reagents* [Part IV], under Calcium Oxide.)

⊕ Lime Chlorinated, Squibb

bottle, lb.

Calx Chlorinata; Chlorinated Calcium Oxide; so-called "Chloride of Lime"; Bleaching Powder. Indefinite composition, chiefly $CaOCl_2$. Of unusually high test, assaying when fresh about 35 percent. of available chlorine, not only 30 percent. as U. S. P. requires. Since the value of chlorinated lime depends upon the amount of available chlorine which may slowly be given off, it will be found more economical to use this article than one of lesser strength. White or grayish-white powder, of penetrating odor, and repulsive saline taste; gradually decomposes on keeping. Partially soluble in water or alcohol. Used chemically and as bleaching agent, also General Disinfectant. Antidotes: ammonia by inhalation or by mouth; albumen; apomorphine subcutaneously as emetic, if overdose was taken by mouth.

Lime Hydrated, Squibb**For Lime Water**

4-drachm vials, per doz.

Pure Hydrated Lime specially designed for convenient preparation of Lime Water. Add contents of vial to 1 gallon distilled water, shake briskly and repeat shaking several times during half an hour. The water will then be saturated, and the excess of lime will settle and should be allowed to remain in the bottle to insure constant saturation. NOTE: The entire contents of a vial should be used up at one operation; it will not do to employ a portion of them at a later date.

Lime Sulphurated. See Calcium Sulphide Crude.**LIME JUICE.**

Succus Citri, N. F. Expressed fresh juice of ripe fruit of *Citrus medica acida* (Fam. *Rutaceæ*). Each 100 mils (Cc.) contains 5 to 10 Gm. acids. Antiscorbutic, Refrigerant, Antiseptic.

LIME JUICE AND PEPSIN.

Succus Citri et Pepsini, N. F. Glycerite pepsin 40 vol. percent., lime juice 60. Each fluidounce contains about 16 grains pepsin. Digestive. Average Dose: 2 fluidrachms (8 mils [Cc.]).

LIME WATER. See Solution Calcium Hydroxide.**LINIMENT ACONITE AND CHLOROFORM.**

Linimentum Aconiti et Chloroformi, N. F. 100 mils (Cc.) contain 4.5 mils fluidextract aconite and 12.5 mils chloroform, with soap liniment and alcohol. Anodyne embrocation. Antidotes: emetics; demulcents; atropine, digitalis, ammonia.

⊕ **LINIMENT AMMONIA.**

Linimentum Ammoniaë; Volatile Liniment. 1 volume ammonia water and 3 volumes sesame oil. Stimulant and Anodyne embrocation.

LINIMENT AMMONIUM IODIDE.

Linimentum Ammonii Iodidi, N. F. Iodine, ammonia water, camphor, oils rosemary and lavender, and alcohol. Contains about 0.5 percent. ammonium iodide. Discutient.

LINIMENT BELLADONNA.

Linimentum Belladonnaë. 100 mils (Cc.) contain 5 Gm. camphor in fluidextract belladonna root. Anodyne.

⊕ **Liniment Camphor, Squibb** bottle, pint

Linimentum Camphoræ; Camphorated Oil. 100 mils (Cc.) contain 20 Gm. camphor in cotton-seed oil. Anodyne, Rubefacient.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

LINIMENT CANADA. See Liniment Opium Compound.

LINIMENT CANTHARIDES. bottle, pint

Representing about 15 percent. cantharides in oil turpentine. Rubefacient, Counter-irritant. Antidotes: emetics; demulcents; morphine subcutaneously.

⊕ Liniment Chloroform, Squibb bottle, pint

Linimentum Chloroformi. 3 volumes chloroform with 7 volumes soap liniment. Anodyne.

LINIMENT CROTON OIL.

Linimentum Tiglii, N. F. 13 vol. percent. croton oil, 43 oil cajuput and 44 alcohol. Counter-irritant, Rubefacient. Antidotes: emetics; oil or mucilage; atropine hypodermically; cocaine.

LINIMENT CROTON OIL COMPOUND.

Linimentum Tiglii Compositum, N. F. 20 volume percent. each oils croton, sassafras and turpentine, with 40 olive oil. Counter-irritant.

⊕ LINIMENT LIME.

Linimentum Calcis; Carron Oil. Equal volumes lime water and linseed oil. Emollient, Protective, Anodyne; in burns chiefly.

LINIMENT MUSTARD COMPOUND.

Linimentum Sinapis Compositum, N. F. Each 100 mils (Cc.) contains 3 mils volatile oil mustard, 20 mils fluidextract meze-reum, 6 Gm. camphor, 15 mils castor oil, with alcohol. Counter-irritant, Rubefacient.

LINIMENT OPIUM COMPOUND.

Linimentum Opii Compositum, N. F.; Canada Liniment. 10 vol. percent. tincture opium, with camphor (1.75 percent.), oils turpentine and peppermint, ammonia water and alcohol. Anodyne. Antidotes: emetics; atropine or strychnine hypodermically; demulcents.

⊕ Liniment Soap, Squibb bottle, pint

Linimentum Saponis; Liquid Opodeldoc; Camphorated Tincture Soap. Each 100 mils (Cc.) contains 6 Gm. dried soap, 4.5 Gm. camphor, and 1 mil oil rosemary as perfume, with alcohol and water.

LINIMENT SOAP CAMPHORATED.

Linimentum Saponato-Camphoratum, N. F.; Solid Opodeldoc. A soft solid, containing soap, camphor, oils thyme and rosemary, alcohol, and stronger ammonia water. Stimulating Anodyne.

Liniment Soap Soft, Squibb bottle, pint

Linimentum Saponis Mollis; Tincture Green Soap. 100 mils (Cc.) contain 65 Gm. soft soap and 2 mils oil lavender, with alcohol. Detergent and Antipruritic, for use by surgeons and dermatologists, as well as for shampooing. Its alkalinity is very slight, merely sufficient to prevent rancidity.

LINIMENT SOAP SOFT, COMPOUND.

Linimentum Saponis Mollis Compositum, N. F.; Compound Tincture Green Soap. 100 mls (Cc.) contain 15 Gm. soft soap, 2 mls oil cade, and alcohol. Antiparasitic Dermic.

Liniment, Stokes'. See Liniment Turpentine Acetic.

Liniment, St. John Long's. See Liniment Turpentine Acetic.

LINIMENT TURPENTINE.

Ferri et Ammonii Citras; Soluble Iron Citrate; Ammonio-ferric turpentine. Counter-irritant, Rubefacient.

Liniment Turpentine Acetic, Squibb bottle, pint

Linimentum Terebinthinæ Aceticum, N. F.; Stokes' or St. John Long's Liniment; *Linimentum Album*. 40 vol. percent. oil turpentine, with egg, oil lemon, acetic acid and rose water. Counter-irritant.

⊕ **LINSEED.**

Linum; Flaxseed. Ripe seeds of *Linum usitatissimum* (Fam. *Linaceæ*). Demulcent, Emollient.

Liquid Court Plaster. See Collodion Flexible.

⊕ **Liquid Petrolatum, Squibb**

Heavy (Californian) 1-pint bottles, per doz.

Petrolatum Liquidum; Mineral Oil, Heavy Californian. Specially repurified for medicinal use. Numerous comparative tests made by us show this Californian oil to differ in essential respects from other American oils and to be superior to the best Russian oils known to us. Therefore we have selected this Californian Heavy Oil, of high viscosity and high specific gravity, as the best and now supply it on all orders. Concerning it the following facts are important: It is refined under our control, and exclusively for us, by The Standard Oil Company of California. It is pure; free from paraffins, inorganic matter, organic sulphur compounds and all injurious hydrocarbons such as anthracenē, phenanthrene, chrysene and oxidized acid and basic bodies. It is colorless, odorless and tasteless; has the very high sp. gr. 0.886 to 0.895 at 15° C., or 0.881 to 0.890 at 25° C.; and it has an exceptionally high natural viscosity—which is of supreme importance because the value of liquid petrolatum is said to reside in lubrication, and true viscosity to be the chief index of lubricating power. Liquid Petrolatum Squibb is prescribed to prevent or relieve intestinal stasis, constipation, colitis and allied conditions; to prevent or relieve hemorrhoids; to regulate the mother's bowels during pregnancy and lactation, as its effect does not pass from mother to child. It is not a purgative, a cathartic, or a laxative, but a mechan-

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

⊕ Liquid Petrolatum, Squibb (Cont.)

ical lubricant. It is not absorbed by the stomach or intestine, does not act on and is not acted upon by the fluids of the gastro-intestinal tract, and passes out of the body in exactly the same condition and quantity that it entered. During its passage it lubricates the lumen of the gut, softens the feces, prevents injury of the mucous membrane by scybala, allows repair of an already abraded mucosa, relieves irritated or fatigued myenteric ganglia, and thus, by permitting a rapid passage of the intestinal contents, prevents the proliferation of bacteria and the production of toxins and a consequent auto-intoxication. In short, its use establishes and maintains a proper body drainage, allowing better digestion and absorption of food. In surgery it is used as an aid in differentiating a surgical intestinal case from one non-surgical; also as a prophylactic to prevent the ascent of intestinal bacteria, thereby preventing secondary infection of biliary and other ducts. In the peritoneal cavity it is used to prevent adhesions or, by Burrows' method, to forestall post-operative stasis. It is useful as a dressing for burns, also for nasal packings and spray. Liquid Petrolatum Squibb sprays better than does a light oil, and lubricates the nasal mucosa more thoroughly and the lubrication is more lasting. **Dosage:** As pure liquid petrolatum has no physiological action, it may be given in any quantity without harm. As it is not chemically active and resists chemical change, it is compatible with any medication indicated. However, certain facts about dosage are worthy of note. The length and calibre of the gastro-intestinal tract differ not only with age but in different individuals of the same age. Therefore the quantity of oil necessary for lubrication will vary. The conditions for which heavy liquid petrolatum is indicated are various, so the size and number of doses may vary. For instance, there must be considered the nature, amount, and consistency of the contents of the bowel; the pathological relaxation or hypertonicity of the intestinal walls; the degree of entero- or viscerop-tosis; the number, kind and place of adhesions, bands or kinks; also whether the life of the patient is active or sedentary. Larger and more frequent doses are necessary at the beginning of treatment than after a normal intestinal condition has been established. In every case a minimum regulating dose should be determined and maintained, not because more oil would do harm, but because it would be wasted. Intestinal lubrication can be produced best when the tract is comparatively empty. The best time for administration, then, is between meals and at bedtime. However, individual preferences for other times may be gratified. An ordinary dose for adults is one tablespoonful between meals and two tablespoonfuls on going to bed. Children and infants need only smaller quantities. As Liquid Petrolatum Squibb is odorless and tasteless, flavoring or a menstruum is not necessary, although such may be added if desired. When prescribing mineral oil, specify Liquid Petrolatum Squibb, and thereby assure a pure, heavy, and viscous mineral oil of the highest quality.

Liquorice. See Glycyrrhiza.

LITHARGE. See Lead Oxide Yellow.

Lithium Benzoate, Squibb

*From Synthetic Acid bottle, $\frac{1}{4}$ lb. ; oz.

From Natural (True) Acid bottle, $\frac{1}{4}$ lb. ; oz.

Lithii Benzoas, U. S. P. VIIth Rev. $\text{LiC}_7\text{H}_5\text{O}_2$. White powder or scales; odorless or faint benzoin odor; cooling, sweetish taste. Soluble in 3 parts water, 13 alcohol; aqueous solubility increased by sodium benzoate and lessened by alcohol. Used as Antirheumatic, Internal Antiseptic. Average Dose: 1 Gm. (15 grains).

Lithium Bromide, Squibb bottle, $\frac{1}{4}$ lb. ; oz.

Lithii Bromidum. LiBr . White, granular, odorless, very deliquescent salt; sharp, slightly bitter taste. 1 Gm. dissolves in 0.6 mil (Cc.) water; freely soluble in alcohol, moderately in ether. Nerve Sedative. Average Dose: 15 grains (1 Gm.). Incompatible with alkaloidal salts in solution. Must be kept securely stoppered, in dry place.

Lithium Carbonate, Squibb

carton, lb. ; $\frac{1}{4}$ lb. ; oz.

Lithii Carbonas. Li_2CO_3 . White, light, odorless powder, of alkaline taste. 1 Gm. dissolves in 78 mils (Cc.) water, 140 boiling water; more freely soluble in water saturated with carbon dioxide; almost insoluble in alcohol. One of the most commonly employed salts of lithium. Systemic Antacid. Average Dose: 8 grains (0.5 Gm.).

Lithium Citrate, Squibb bottle, $\frac{1}{4}$ lb. ; oz.

Lithii Citras. $\text{Li}_3\text{C}_6\text{H}_5\text{O}_7 \cdot 4\text{H}_2\text{O}$. White, odorless powder; slightly deliquescent; cooling, faintly alkaline taste. 1 Gm. dissolves in 1.4 mils (Cc.) water; almost insoluble in alcohol or ether. Systemic Alkali, Diuretic. Average Dose: 8 grains (0.5 Gm.).

Lithium Citrate, Granular Effervescent, Squibb

bottle, lb. ; 4-oz. bottles, per doz.

Sal Lithii Citratis Effervescens, N. F. Dropped from U. S. P. 5 percent. lithium citrate. Average Dose: 420 grains (8 Gm.).

Lithium Glycerophosphate, Squibb bottle, oz.

$\text{C}_3\text{H}_7\text{O}_3\text{PO}(\text{OLi})_2$. White water-soluble powder. Used as Nervine, chiefly in gout with nervous debility. Dose: 3 to 10 grains (0.2 to 0.65 Gm.). Avoid hot solvents. Aqueous solutions do not keep well; 1 minim chloroform to each fluidounce retards deterioration.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Lithium Salicylate, Squibb bottle, $\frac{1}{4}$ lb. ; oz.

Lithii Salicylas, N. F. Dropped from U. S. P. $\text{LiC}_7\text{H}_5\text{O}_3$.
White or grayish-white, odorless, sweetish powder. Very soluble in water or alcohol. Antirheumatic, Intestinal Antiseptic.
Average Dose: 15 grains (1 Gm.).

Lithium Tartrate, Squibb bottle, oz.

$\text{Li}_2\text{C}_4\text{H}_4\text{O}_6 \cdot \text{H}_2\text{O}$. White, crystalline powder. Soluble in water. Dose: 5 to 15 grains (0.3 to 1 Gm.).

Litmus Paper, Squibb Blue, Red or Neutral.

* strips, 100 in vial, ; box of 10 vials,
sheets, 2 in tube,

Liver of Sulphur. See Potassa Sulphurated.

⊕ **Lobelia, Squibb**

Ground for Percolation tin, lb.

Lobelia; Indian Tobacco. Dried leaves and flowering tops of *Lobelia inflata* (Fam. *Lobeliaceæ*). Antispasmodic, Expectorant; mainly in pectoral affections. Average Dose: $2\frac{1}{2}$ grains (0.15 Gm.). (See also Fluidextract; Tincture.)

LOGWOOD. See Hematoxylon.

LOTION AMMONIATED CAMPHOR.

Lotio Ammoniacalis Camphorata, N. F.; Aqua Sedativa, N. F. III. Each 1000 mls (Cc.) contains 60 Gm. sodium chloride, 60 mls ammonia water, 10 mls spirit camphor, with water. Topical Anodyne and Sedative. Shake well before dispensing.

LOTION, BLACK.

Lotio Nigra, N. F.; Black Wash. Each 1000 mls (Cc.) contains 8.75 Gm. calomel, 15 mls water, lime water q. s. Antiseptic, Cicatrizant, Parasiticide. Shake well before dispensing.

LOTION LEAD AND OPIUM.

Lotio Plumbi et Opii, N. F. Each 1000 mls (Cc.) contains 17.5 Gm. lead acetate, 35 mls tincture opium, water q. s. Antiphlogistic. Shake well before dispensing.

LOTION, YELLOW.

Lotio Flava, N. F.; Yellow Wash. Each 1000 mls (Cc.) contains 3 Gm. corrosive sublimate, 35 mls water, lime water q. s. Topical Antiluetic, Vulnerary. Shake well before dispensing.

LUGOL'S SOLUTION. See Solution Iodine Compound.

Lunar Caustic. See Silver Nitrate Moulded.

LUPULIN.

Lupulinum, N. F. Dropped from U. S. P. Glandular trichomes separated from strobiles of *Humulus Lupulus* (Hops). Granular, brownish-yellow to brown powder, odor and taste of hops. Yields not less than 60 percent. of ether-soluble matter. Bitter Tonic, asserted Antaphrodisiac. Average Dose: 8 grains (0.5 Gm.).

LYCETOL.

Dimethylpiperazine Tartrate. White, odorless powder. Soluble in water. Diuretic, Uric-acid Solvent. Dose: 15 to 30 grains (1 to 2 Gm.), in carbonated water.

LYCOPODIUM.

Lycopodium. Spores of *Lycopodium clavatum* (Fam. *Lycopodiaceæ*). Fine, light-yellow, very mobile, odorless, tasteless powder. Absorbent Dusting-powder; in intertrigo, etc. Also used pharmaceutically and technically.

Mace Powdered, Squibb

tin, lb.

sprinkler-top tins, for table use, 4 oz., per doz.

2 oz., per doz.

1 oz., per doz.

Macis, N. F. Being part of covering of nutmeg, it possesses similar properties. Yellowish-red; strong odor and taste; contains 7 to 9 percent. volatile oil. Condiment, Aromatic, Carminative. Average Dose: 8 grains (0.5 Gm.).

MACROTYS. See *Cimicifuga*.

Magma Bismuth. See Bismuth Magma.

MAGMA FERRIC HYDROXIDE.

Magma Ferri Hydroxidi, N. F.; Ferric Hydroxide, U. S. P. VIIIth Rev. Freshly prepared, brownish-red magma; insoluble in water. For chemical or pharmaceutical use.

Magma Magnesia. See Magnesia Magma.

Magnesia Alba. See Magnesium Carbonate.

Magnesia Calcined, Heavy, Squibb

tin, lb. ; ¼ lb.

Magnesium Oxidum Ponderosum; Ponderous Magnesia. MgO. A special, medicinal quality; not the regular market article, Action and dose as of following.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

⊕ **Magnesia Calcined, Light, Squibb**

tin, lb. ; ¼ lb.

Magnesium Oxidum; *Magnesia*; Light *Magnesia*; *Magnesia Usta*. MgO . A special medicinal quality; not the regular market article. Prepared by thorough ignition of light carbonate. Almost insoluble in water; insoluble in alcohol. White, very bulky, fine, odorless powder; earthy taste. Absorbent dusting powder; Antacid, Laxative. **Average Dose:** 30 grains (2 Gm.); small doses are antacid, large ones laxative.

Magnesia Magma, Squibb bottle, pint. ; ½ pint

Magma Magnesiæ; Milk of *Magnesia*. Completely hydrated magnesium hydroxide in aqueous suspension. Yields 6.5 to 7.5 $Mg(OH)_2$; equivalent on average to 32 grains per fluid-ounce. Antacid, in conditions arising from gastric hyperacidity and in milk modification for infant feeding; Neutralizing Dentifrice; Vehicle for salicylates, iodides, etc. **Average Dose:** 2½ fluidrachms (10 mils [Cc.]).

Magnesia Usta. See *Magnesia Calcined, Light*.

⊕ **Magnesium Carbonate, Squibb** carton, lb.

Magnesium Carbonas; Light *Magnesium Carbonate*; *Magnesia Alba*. $(MgCO_3)_4 \cdot Mg(OH)_2 \cdot 5H_2O$. A specially repurified, medicinal quality; not regular market article, which is vastly less costly. Yields upon ignition not less than 39.2 percent. magnesium oxide. Very light, white powder. Odorless; slightly earthy taste. Practically insoluble in water; insoluble in alcohol. Dusting powder; Antacid, Laxative. **Average Dose:** 45 grains (3 Gm.); large doses are laxative.

MAGNESIUM CHLORIDE.

Magnesium Chloridum, N. F. $MgCl_2 \cdot 6H_2O$. Colorless, bitter, deliquescent crystals. 1 Gm. dissolves in about 0.6 mil (Cc.) water; readily soluble in alcohol. Saline Cathartic. **Average Dose:** 4 drachms (16 Gm.).

Magnesium Chloride Reagent. See *Reagents (Part IV)*.

Magnesium Citrate, Granular Effervescent, Squibb

bottle, lb. ; 4-oz. bottles, per doz.

Each drachm contains about 10 grains anhydrous magnesium citrate. Mild Saline Laxative. **Dose:** 120 grains (8 Gm.).

Magnesium Glycerophosphate, Squibb bottle, oz.

$MgO_2 \cdot C_3H_7O_3PO$. White powder. Sparingly soluble in water; soluble in dilute acids. Employed in neurasthenia, rickets, difficult dentition, etc. **Dose:** 3 to 6 grains (0.2 to 0.4 Gm.). Its solutions do not keep well; 1 minim chloroform to fluidounce is said to retard deterioration very materially.

Magnesium Hypophosphite, Squibb

bottle, ; ¼ lb. ; oz.

$Mg(H_2PO_2)_2 \cdot 6H_2O$. White crystals. Soluble in water. Used as Tonic. **Dose:** 3 to 10 grains (0.2 to 0.65 Gm.). Care should be observed in dispensing this salt, as explosion is liable to occur when triturated or heated with nitrates, chlorates or other oxidizing substances.

Magnesium Oxide. See *Magnesia Calcined*.

MAGNESIUM PEROXIDE.

Magnesium Dioxide. MgO_2 . White powder. Insoluble in water, but gradually decomposed by it into hydrogen peroxide and magnesium hydroxide and former then decomposed by latter with liberation of oxygen. Gastro-intestinal Antiseptic, Antacid. **Dose:** 4 to 8 grains (0.25 to 0.5 Gm.).

Magnesium Phosphate, Squibb

bottle, lb. ; ¼ lb. ; oz.

Magnesium Phosphate Dibasic. $\text{MgHPO}_4 + \text{aq.}$ White, crystalline powder. Soluble in dilute acids; slightly in water. Alterative, Antirheumatic. **Dose:** 10 to 20 grains (0.65 to 1.3 Gm.).

Magnesium Salicylate, Squibb

tin, lb. ; ¼ lb. ; 1-oz. vial,

$\text{Mg}(\text{C}_7\text{H}_5\text{O}_3)_2 \cdot 4\text{H}_2\text{O}$. White, crystalline powder, containing about 74 percent. of salicylic acid. Soluble in about 5 parts water. Antirheumatic and Antifermentative, like Sodium Salicylate, but latterly recommended especially as an intestinal Antizymotic. **Dose:** 5 to 30 grains (0.3 to 2 Gm.) three times daily, between meals. (See also Tablets [Part II].)

⊕ **Magnesium Sulphate, Squibb**

(Granular) tin, lb. ; ½ lb. ; ¼ lb.

Magnesiæ Sulphas; Epsom Salt. $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$. A recrystallized, distinctive quality, almost free from the bitterness usually found in the regular market article. Repurified by recrystallization, to remove dirt and mechanical impurities unavoidably present in ordinary grade because of the crude method of its preparation on a large scale. It is carefully put up to preserve its cleanly condition, and will be found to make a clear solution wholly free from arsenic and heavy metals. Small, colorless, odorless, slowly efflorescent granules, of cooling, saline, bitter taste. 1 Gm. dissolves in 1 mil (Cc.) water; insoluble in alcohol. Active Saline Cathartic; latterly also used locally as an Antiphlogistic in erysipelas, ivy poisoning and cutaneous inflammation in general, a saturated aqueous solution being employed on compresses constantly kept moist with the lotion; also credited with Local Anesthetic and Antitetanic power when used by subarachnoid injection. **Average Dose:** 240 grains (16 Gm.). Acts in ½ to 1 hour if taken before breakfast; in 2 to 4 hours if patient is in bed. (See also Reagents.)

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

Magnesium Sulphate Exsiccated, Squibb

carton, lb. ; ¼ lb.

The foregoing crystalline magnesium sulphate deprived of its water of crystallization. Action same as preceding granular salt, but twice as strong. Used also as Reagent. Average Dose: 120 grains (8 Gm.).

Magnesium Sulphate, Granular Effervescent, Squibb

bottle, lb. ; 4-oz. bottles, per doz.

Contains 50 percent. magnesium sulphate. Dose: ½ to 1 oz. tr. (16 to 32 Gm.).

Magnesium and Ammonium Phosphate, Squibb

bottle, lb. ; ¼ lb. ; oz.

$Mg(NH_4)PO_4 \cdot 6H_2O$. White, odorless, tasteless powder. Insoluble in ordinary organic solvents. Gastric Sedative and Protective, like bismuth salts; also used in gout. Dose: 10 to 30 grains (0.65 to 2 Gm.).

⊕ MALE FERN. See *Aspidium*.

MALLOW LEAVES.

Malva Folia, N. F. Dried leaves of *Malva sylvestris* and *M. rotundifolia*. (Fam. *Malvaceæ*). Inodorous; mucilaginous, bland taste. Demulcent "herb tea."

MALT.

Maltum. Grain of *Hordeum sativum* (Fam. *Gramineæ*), partly germinated artificially, then dried. Yellow or amber grains; agreeable odor; sweet taste. 1 Gm. converts 5 Gm. potato starch into sugars. (See also Extract.)

⊕ MANDRAKE. See *Podophyllum*.

Manganese Citrate Soluble, Squibb

bottle, oz.

Mangani Citras Solubilis, N. F. Pinkish, glistening, odorless, slightly hygroscopic scales, containing about 13.5 percent. manganese. 1 Gm. dissolves slowly in about 4 mils (Cc.) water; nearly insoluble in alcohol. Hematinic, but designed especially for use in preparing Solution Iron Peptonate and Manganese.

Manganese Dioxide Precipitated, Squibb

oz.

Mangani Dioxidum Præcipitatum; Manganese Peroxide or Hyperoxide; Black Oxide of Manganese. Not less than 80 percent. MnO_2 , with small amounts of other oxides of manganese. Great care is observed in its manufacture, and it is proven to conform in all respects to U. S. P. requirements. Heavy, fine, black, odorless, tasteless, insoluble powder. Alterative and Emmenagogue internally; Dermic (10 to 25 percent. ointment) externally. Average Dose: 4 grains (0.25 Gm.). (See also Reagents [Part IV]; Tablets [Part II].)

Manganese Glycerophosphate, Squibb bottle, oz.

Mangani Glycerophosphas Solubilis, N. F. Yellowish to brownish or pinkish powder. Contains 70 to 75 percent. $\text{MnC}_3\text{H}_7\text{PO}_6$, with citric acid. 1 Gm. dissolves in about 4 mils (Cc.) water. Used as Nerve Tonic; in neurasthenia, convalescence, etc. **Average Dose:** 3 grains (0.2 Gm.). Its solutions do not keep well; 1 minim chloroform to each fluid-ounce retards their deterioration.

Manganese Hypophosphite, Squibb

bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Mangani Hypophosphis, N. F. $\text{Mn}(\text{PH}_2\text{O}_2)_2 \cdot \text{H}_2\text{O}$. Pink, odorless, nearly tasteless salt. Freely soluble in water; almost insoluble in alcohol. Hematinic. **Average Dose:** 3 grains (0.2 Gm.).

Manganese Oxide, Black. See Manganese Dioxide.**Manganese Sulphate, Squibb**

bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Mangani Sulphas, N. F.; Manganous Sulphate. Dropped from U. S. P. $\text{MnSO}_4 \cdot 4\text{H}_2\text{O}$. Colorless or pale-pink, translucent, slightly efflorescent, odorless, bitter-astringent crystals. 1 Gm. dissolves in about 1 mil (Cc.) water; insoluble in alcohol. Used as Hematinic and Alterative internally; Dis-cutient externally (10 to 20 percent. ointment), in stiff joints from gout, rheumatism, etc. **Average Dose:** 3 grains (0.2 Gm.). (See also Reagents [Part IV].)

MANNA.

Manna. Dried saccharine exudation of *Fraxinus Ornus* (Fam. *Oleaceæ*). Yellowish-white, irregular, elongated pieces or masses; slight, characteristic odor; sweet, slightly acrid taste. Mild Cathartic, Sweetener; usually prescribed with other purgatives, and mostly for children. **Average Dose:** 4 drachms (16 Gm.).

Marigold. See Calendula.**Marsh Mallow Powdered.** See Althæa Powdered.**Mass, Blue.** See Mass Mercury.**MASS COPAIBA.**

Massa Copaibæ, N. F.; Solidified Copaiba. 94 percent. copaiba, massed with 6 percent. magnesium oxide. Antica-tarrhal, Antiseptic, Cicatrizant. **Average Dose:** 15 grains (1 Gm.).

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

⊕ **Mass Ferrous Carbonate, Squibb**

jar, lb. ; ¼ lb.

Massa Ferri Carbonatis; Vallet's Mass. Containing not less than 35 percent. FeCO_3 . Hematinic. Average Dose: 4 grains (0.25 Gm.).

⊕ **Mass Mercury, Squibb**

*Pilular

jar, lb. ; ¼ lb.

Powdered

bottle, lb. ; ¼ lb.

Blue Mass; Blue Pill; Mercury Pill. Made by a special formula yielding a product superior to U. S. P. *Massa Hydrargyri*. Contains 33 percent. mercury, as officially demanded, but the althæa and glycerin are replaced by sugar which serves the purpose better. A specially devised shaker subdivides the mercury until the globules are invisible under a lens magnifying ten diameters. Mercury mass has a tendency to harden on the surface by age, which, however, does not affect its efficiency. A small quantity of glycerin is placed on the surface to minimize this condition. If not too old the mass immediately under the surface will be found of the normal consistency. Cathartic, Antiluetic. Average Dose: 4 grains (0.25 Gm.), as pills or tablets. (See also Tablets [Part II].)

Mass, Vallet's. See Mass Ferrous Carbonate.

MASTIC.

Mastiche, N. F. Concrete resinous exudation from *Pistacia Lentiscus* (Fam. *Anacardiaceæ*). Pale-yellow or greenish-yellow, transparent, brittle tears; slight, balsamic odor; mild, terebinthinate taste. Carminative, Corrigent. Average Dose: 30 grains (2 Gm.).

MATICO.

Matico, N. F. Dropped from U. S. P. Dried leaves of *Piper angustifolium* (Fam. *Piperaceæ*). Genito-urinary Stimulant, similar to buchu. Average Dose: 1 drachm (4 Gm.).

Matricaria, Squibb

tin, lb.

Matricaria; German Chamomile. Dried flower-heads of *Matricaria Chamomilla* (Fam. *Compositæ*). Carefully differentiated from English chamomile and other allied species. Popularly used as a Bitter and Aromatic tea and poultice. Average Dose: 240 grains (16 Gm.)

MAY APPLE. See Podophyllum.

MEADOW SAFFRON. See Colchicum.

MEDINAL. Brand of Barbitol-Sodium.

MELILOT.

Melilotus, N. F.; Yellow Sweet Clover. Dried leaves and flowering tops of *Melilotus officinalis* (Fam. *Leguminosæ*). Tonka-like odor; sweetish, slightly pungent taste. Emollient; also used as Stimulant and Antispasmodic, in neuralgia.

⊕ **Menthol, Squibb**

bottle, oz.

Menthol; Peppermint Camphor. $C_{10}H_{19}OH$. A secondary alcohol from oil peppermint. Colorless needles; strong peppermint odor; warm aromatic taste, followed by sensation of cold when air is drawn into mouth. Very slightly soluble in water or glycerin; freely soluble in alcohol, ether,⁶⁶ chloroform, or fixed oils. It liquefies when triturated with about an equal weight of camphor, thymol, chloral hydrate, phenol, betanaphthol or resorcinol. Counter-irritant, Anodyne, Anesthetic, externally, in headache, toothache, skin diseases, coryza, etc.; Carminative, internally, in vomiting, colic, etc. Average Dose: 1 grain (0.065 Gm.).

Menthol Camphorated, Squibb

1-oz. vial

Menthol Camphoratum, N. F.; Campho-Menthol. Liquefied mixture of equal parts camphor and menthol with 5 percent. alcohol. Local Anodyne, Counter-irritant.

MENYANTHES.

Menyanthes, N. F.; Buckbean; Marsh Trefoil. Dried leaves of *Menyanthes trifoliata* (Fam. *Gentianaceæ*). Bitter. Average Dose: 15 grains (1 Gm.).

MERCUROL.

Mercury Nucleinate. Brownish-white powder; 10 percent. mercury. Soluble in water; insoluble in alcohol. Astringent, Antipyric, Antisyphilitic. Applied in $\frac{1}{2}$ to 5 percent. solution. Dose: $\frac{1}{2}$ to 2 grains (0.03 to 0.13 Gm.).

⊕ **Mercury Repurified, Squibb**

stone bottle, lb.

Hydrargyrum; Quicksilver. Hg. Sp. gr. 13.5. A very pure grade, practically free from foreign metals. Eligible for dental use and for all other uses demanding a highly pure product. (See also Reagents [Part IV].)

⊕ **Mercury Ammoniated, Squibb**

(Powdered)

bottle, lb. ; $\frac{1}{4}$ lb.

Hydrargyrum Ammoniatum; White Precipitate; Mercury and Ammonium Chloride; Sal Alembroth. $HgNH_2Cl$. White, amorphous, odorless powder; earthy, afterwards styptic, metallic taste. Insoluble in water or alcohol. Antiparasitic Dermic, in 1 to 10 percent. ointment. (See also Ointment.)

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Mercury Bichloride or Perchloride. See Mercury Chloride Corrosive.

Mercury Biniodide. See Mercury Iodide Red.

Mercury Bromide (Mercuric) Reagent.
See Reagents (Part IV).

⊕ **Mercury Chloride Corrosive, Squibb**

* Powdered or Granular bottle, lb. ; ¼ lb.

Hydrargyri Chloridum Corrosivum; Corrosive Sublimate; Mercuric Chloride; Mercury Bichloride or Perchloride. HgCl_2 . Heavy, colorless, odorless granules, or white powder; acid, persistent metallic taste. 1 Gm. dissolves in 13.5 mls (Cc.) water, 3.8 alcohol, 12 glycerin, 22 ether. Antiseptic, Alterative, Antiluetic; wash for wounds, etc., in syphilis, skin diseases, chronic rheumatism, etc. Also Reagent. Average Dose: $\frac{1}{20}$ grain (0.003 Gm.). Incompatible with alkalis, alkaloidal salts; with copper, iron and zinc salts, hypophosphites; infusions cinchona, calumba, oak bark or senna. Antidotes: white of egg, or flour stirred in milk; emetics; Dr. Fantus's antidote (6 grains sodium hypophosphite with 4 grains sodium acetate, or 15 grains sodium hypophosphite with $2\frac{1}{2}$ fluidrachms water and $1\frac{1}{4}$ fluidrachms solution hydrogen peroxide. If amount of poison taken is known Dr. F. gives 10 times as much sodium hypophosphite, followed at once by copious gastric lavage with 3 percent. solution sodium bicarbonate to which may be added 8 grains sodium hypophosphite. The entire procedure is repeated every 8 hours until gastric contents are free from mercury by Vogel's test); castor oil. (See also Tablets [Part II]; Reagents [Part IV].)

⊕ **Mercury Chloride Mild, Squibb** bottle, lb. ; ¼ lb.

Hydrargyri Chloridum Mite; Calomel; Mercurous Chloride; Mercury Subchloride or Protochloride. HgCl . Odorless, tasteless, impalpable powder. Insoluble in ordinary solvents. Cholagogue Cathartic, Antisyphilitic, Alterative, Intestinal Antiseptic; also Reagent. Average Dose: laxative, $2\frac{1}{2}$ grains (0.15 Gm.); alterative, etc., $\frac{1}{4}$ grain (0.015 Gm.). Incompatible with iodine, soluble iodides and bromides, alkalis, alkaloidal salts, etc. (See also Tablets Calomel [Part II]; Reagents [Part IV].)

⊕ **Mercury Iodide Red, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Hydrargyri Iodidum Rubrum; Mercury Biniodide; Precipitated Mercuric Iodide. HgI_2 . Scarlet-red, amorphous, odorless, nearly tasteless powder. 1 Gm. dissolves in 115 mls (Cc.) alcohol, 910 chloroform, 120 ether; also soluble in solutions of soluble iodides, mercuric chloride and sodium thiosulphate; almost insoluble in water or glycerin. Antisyphilitic, Alterative; in syphilis, scrofula, obstinate skin diseases, etc. Also Reagent. Incompatible with alkalis, alkali carbonates, alkaloidal salts, etc. Average Dose: $\frac{1}{20}$ grain (0.003 Gm.). (See also Tablets [Part II].)

⊕ **Mercury Iodide Yellow, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Hydrargyri Iodidum Flavum; Yellow Mercurous Iodide; Mercury Protiodide. HgI. Yellow, odorless powder. Practically insoluble in water; insoluble in alcohol or ether. Antisyphilitic, Alterative. **Average Dose:** 1/6 grain (0.01 Gm.). Incompatible with alkali iodides, bromides and chlorides; with oxidizing agents, etc. (See also Tablets [Part II].)

Mercury Mass. See Mass Mercury.

MERCURY NUCLEINATE. See Mercuriol.

Mercury Oleate. See Oleate Mercury.

⊕ **Mercury Oxide Red, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Hydrargyri Oxidum Rubrum; Red Mercuric Oxide; Red Precipitate. HgO. Heavy, orange-red, crystalline scales or powder; odorless; slight metallic taste. Almost insoluble in water; insoluble in alcohol. Used only externally, in 1/2 to 10 percent. ointment, as Parasiticide and Antiluetic. (See also Reagents [Part IV].)

⊕ **Mercury Oxide Yellow, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Hydrargyri Oxidum Flavum; Yellow Precipitate. HgO. Orange-yellow, amorphous, heavy, odorless, impalpable powder; slightly metallic taste. Almost insoluble in water; insoluble in alcohol. Employed in 0.5 to 10 percent. ointment as Parasiticide, Cicatrizant, Antipytic; in ophthalmia, ringworm, pediculi, chancre, etc. (See also Ointment.)

Mercury Protiodide. See Mercury Iodide Yellow.

Mercury Protochloride. See Mercury Chloride Mild.

⊕ **Mercury Salicylate, Squibb**

bottle, oz.

Hydrargyri Salicylas; Mercuric Salicylate. White or pinkish-white, odorless, tasteless powder; 54 to 59.5 per cent. Hg. Nearly insoluble in water or alcohol; soluble in solutions of fixed alkalies or their carbonates. Antiluetic, Gonococcicide (1:300 suspension), Antiseptic (10 percent. powder or ointment). **Average Dose:** 1/16 grain (0.004 Gm.); by intramuscular injection, 1 grain (0.065 Gm.) in suspension every fourth to second day. Incompatible with iodides. (See also Ampuls.)

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

Mercury Subchloride. See Mercury Chloride, Mild.

Mercury Subsulphate Yellow, Squibb bottle, oz.

Hydrargyri Subsulphas Flavus, U. S. P. 1890; Turpeth Mineral; Basic Mercuric Sulphate. $\text{HgSO}_4 \cdot 2\text{HgO}$. Heavy, yellow, odorless, almost tasteless powder. Soluble in about 2,000 parts cold water, 25 hot water. Antiluetic, chiefly subcutaneous; in syphilis, croup, etc. **Dose:** alterative $\frac{1}{4}$ to $\frac{1}{2}$ grain (0.015 to 0.03 Gm.); emetic (in children), 2 to 3 grains (0.13 to 0.2 Gm.).

MERCURY SUCCINIMIDE.

$\text{Hg}[(\text{CH}_2\text{CO})_2\text{N}]_2$. White powder. Soluble in about 75 parts cold water, 25 hot water. Antiluetic, chiefly subcutaneously; said to be non-irritating. **Dose:** $\frac{1}{5}$ to $\frac{2}{5}$ grain (0.012 to 0.025 Gm.) daily. (See also Tablets, Hypodermic [Part II].)

Mercury Sulphide Red, Squibb bottle, oz.

Vermilion; Artificial Cinnabar. HgS . Bright-scarlet powder. Insoluble in water, alcohol or hydrochloric acid. Used mostly technically; sometimes by fumigation in syphilis, 30 grains (2 Gm.) on red-hot iron and fumes inhaled.

Mercury Tannate, Squibb bottle, oz.

Mercurous Tannate. $2\text{Hg}_2 \cdot 3(\text{C}_{14}\text{H}_9\text{O}_9) \cdot \text{OH}$. Greenish-gray powder; 50 percent. mercury. Insoluble in ordinary solvents. Antiluetic. **Dose:** 1 to 2 grains (0.065 to 0.13 Gm.). (See also Tablets [Part II]).

Mercury and Ammonium Chloride. See Mercury Ammoniated.

⊕ **Mercury with Chalk, Squibb** bottle, $\frac{1}{4}$ lb. ; oz.

Hydrargyrum cum Creta; Gray powder. 38 percent. mercury, incorporated in a state of very minute subdivision with 57 percent precipitated chalk. We use latter instead of prepared chalk (officially prescribed), because it yields a better product. Light gray, rather damp powder; odorless, slightly sweetish taste. Intestinal Antiseptic, Mild Cathartic, Antiluetic. **Average Dose:** 4 grains (0.25 Gm.). (See also Tablets [Part II].)

MERGAL.

Mixture of Mercuric Cholate 1 part, and Tannin Albuminate 2 parts, in capsule form. $\frac{3}{4}$ grain mercuric cholate equals in mercury content $\frac{5}{22}$ grain corrosive sublimate. Insoluble in water, readily soluble in digestive fluids. Antiluetic. **Dose:** $2\frac{1}{2}$ to 5 grains (0.15 to 0.3 Gm.).

MESOTAN.

Ericin; Methyloxymethyl Salicylate. Yellowish, faintly aromatic, oily liquid, sp. gr. 1.2. Soluble freely in oils, alcohol, ether, chloroform; sparingly in water. Local Antirheumatic and Anodyne. Applied with equal volume olive oil.

Methyl Acetate, Squibb bottle, lb. ; ¼ lb.

$C_3H_6O_2$. Colorless, fragrant liquid; sp. gr. about 0.960. Miscible with alcohol or ether; moderately soluble in water. Used technically.

METHYL AMINOXYBENZOATE. See Orthoform.

Methylbenzoylecgonine. See Cocaine.

⊕ **Methyl Salicylate, Squibb** bottle, lb. ; ¼ lb.

Methylis Salicylas; Synthetic (Artificial) Oil Wintergreen. $CH_3C_7H_5O_3$. Practically identical with oils gaultheria and birch. Colorless, yellowish or reddish liquid; wintergreen odor; sweetish, aromatic taste. Sp. gr. 1.180 to 1.185. Soluble freely in alcohol, ether, chloroform; sparingly in water. Antirheumatic, Antipyretic; Flavoring. Average Dose: 12 minims (0.75 mil [Cc.]).

Methylene Blue, Medicinal. See Methylthionine Chloride.

Methylmorphine. See Codeine.

Methylthionine Chloride, Squibb bottle, oz.

Methylthioninæ Chloridum; Methylene Blue Medicinal. $C_{16}H_{18}N_3ClS \cdot 3H_2O$. Aniline derivative, free from arsenic, commercial dye and mineral impurities. Specially prepared for medicinal use. Ordinary methylene blue contains zinc chloride and arsenic, and is not eligible for medicinal use. Dark-green, crystalline powder, or crystals of bronze-like lustre. Readily soluble in water or alcohol; less freely in chloroform. Urinary Antiseptic, Antiperiodic, Anodyne; in malaria, gonorrhea, cystitis, carcinoma, etc. Also Reagent. Average Dose: $2\frac{1}{2}$ grains (0.15 Gm.); by injection, 1 grain (0.065 Gm.). Urine becomes greenish-blue during use of this drug. Incompatible with potassium iodide and reducing agents.

MEZEREUM.

Mezereum; Mezereon. Dried bark of *Daphne Mezereum*, *D. Gnidium* or *D. Laureola* (Fam. *Thymeleaceæ*). Antiquated Antiluetic and Vesicant.

MILK FERMENTED.

Lac Fermentatum, N. F.; Kumyss. Cow's milk fermented with compressed yeast and sugar. Nutrient. Average Dose: 8 fluidounces (240 mils [Cc.]).

MILK OF ALMOND. See Emulsion Almond.

MILK OF ASAFETIDA. See Emulsion Asafetida.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Magma Bismuth. See Bismuth Magma.

Magma Magnesia. See Magnesia Magma.

Milk of Bismuth See Bismuth Magma.

Milk of Magnesia. See Magnesia Magma.

Milk of Sulphur. See Sulphur Precipitated.

Milk Sugar. See Sugar of Milk.

Mineral Oil. See Liquid Petrolatum.

MIXTURE ALMOND. See Emulsion Almond.

MIXTURE AMMONIUM CHLORIDE.

Mistura Ammonii Chloridi, N. F. Each fluidounce contains about $11\frac{1}{2}$ grains each ammonium chloride and pure extract licorice, with water. Expectorant. **Average Dose:** 2 fluidrachms (8 mls [Cc.]).

MIXTURE, ASTRINGENT.

Mistura Adstringens, N. F.; Mixture Astringent and Escharotic; Villate's Solution. Prepared from solution lead subacetate, copper sulphate, zinc sulphate and diluted acetic acid; the resulting lead sulphate being removed. Astringent (diluted with 3 or 4 parts water) and Escharotic (pure).

MIXTURE, BASHAM'S. See Solution Iron and Ammonium Acetate.

Mixture, Brown. See Mixture Glycyrrhiza Compound.

MIXTURE CAMPHOR ACID.

Mistura Camphoræ Acida, N. F.; Hope's Mixture. Each fluidounce contains $8\frac{2}{5}$ minims nitric acid, $5\frac{3}{4}$ minims tincture opium, with camphor water. Intestinal Astringent. **Average Dose:** 2 fluidrachms (8 mls [Cc.]).

MIXTURE CAMPHOR AROMATIC.

Mistura Camphoræ Aromatica, N. F.; Parrish's Camphor Mixture. Each 100 mls (Cc.) contains 25 mls compound tincture lavender, 3.5 Gm. sugar, camphor water q. s. Aromatic Carminative. **Average Dose:** 2 fluidrachms (8 mls).

†**MIXTURE CARMINATIVE.**

Mistura Carminativa, N. F.; Dalby's Carminative. Each fluidounce contains 30 grains magnesium carbonate, $1\frac{1}{2}$ grains potassium carbonate, 12 minims tincture opium, $\frac{1}{4}$ minim each oils caraway, fennel and peppermint, with syrup and water. Carminative. **Average Dose:** infants', 8 minims (0.5 mil).

MIXTURE CHALK.

Mistura Cretæ. Compound chalk powder 20 percent., cinnamon water 40 vol. percent. Antacid, Antidiarrheal. **Average Dose:** 4 fluidrachms (15 mls [Cc.]).

Mixture Chloral and Potassium Bromide Compound, Squibb pint, ; ¼ pint

Mistura Chloralis et Potassii Bromidi Composita, N. F. Each fluidrachm contains about $11\frac{3}{8}$ grains each chloral hydrate and potassium bromide, and $\frac{1}{8}$ grain each extracts cannabis and hyoscyamus. Nerve Sedative, Hypnotic, Antispasmodic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

MIXTURE CHLOROFORM AND CANNABIS COMPOUND. See Mixture Chloroform and Morphine Compound.

† **MIXTURE CHOLOFORM AND MORPHINE COMPOUND.**

Mistura Chloroformi et Morphinae Composita, N. F.; formerly Mixture Chloroform and Cannabis Indica Compound. Each fluidounce contains about 60 minims chloroform, 89 minims tincture cannabis, 12 minims tincture capsicum, 15.6 minims ether, and $1\frac{1}{5}$ grains morphine sulphate. Analgesic, Carminative. Average Dose: 30 minims (2 mils [Cc.]).

MIXTURE COPAIBA.

Mistura Copaibæ. N. F.; Lafayette Mixture. Each fluidounce contains 1 fluidrachm each copaiba, spirit nitrous ether and compound tincture lavender, 15 minims solution potassium hydroxide, with syrup and mucilage acacia. Genito-urinary Anticatarthal, Diuretic. Average Dose: 2 fluidrachms (8 mils).

MIXTURE COPAIBA AND OPIUM.

Mistura Copaibæ et Opii, N. F.; Chapman's Mixture. Each 100 mils (Cc.) contains 25 mils copaiba, 25 spirit nitrous ether, 6.5 compound tincture lavender, 3.2 tincture opium, 12.5 mucilage acacia, water q.s. Used as Genito-urinary Anticatarthal, Diuretic; mainly in gonorrhea. Average Dose: 1 fluidrachm (4 mils).

Mixture, Diarrhea. See Tincture Opium Compound.

Mixture Glycyrrhiza Compound, Squibb pint,

Mistura Glycyrrhizæ Composita; Brown Mixture; Licorice Mixture. Containing pure extract glycyrrhiza, acacia, camphorated tincture opium, antimony and potassium tartrate ($\frac{1}{8}$ gr. per fl. oz.), and spirit nitrous ether, in syrup and water. Expectorant. Average Dose: $2\frac{1}{2}$ fluidrachms (10 mils [Cc.]).

MIXTURE, GRIFFITH'S. See Mixture Iron Compound.

MIXTURE GUAIAIC.

Mistura Guaiaci, N. F. Contains 12.5 volume percent. tincture guaiac, with honey and cinnamon water. Alterative in chronic rheumatism, gout, etc. Average Dose: 4 fluidrachms (16 mils [Cc.]).

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

MIXTURE, HOPE'S. See Mixture Camphor Acid.

MIXTURE IRON COMPOUND.

Mistura Ferri Composita, N. F.; Griffith's Mixture. Should be freshly made when wanted. Contains nascent ferrous carbonate suspended in myrrh emulsion. Only the green mixture should be dispensed; not when it has become darker, reddish-brown in color. Hematinic; in chronic skin diseases, chlorosis, and other chronic conditions attended by anemia. Average Dose: 4 fluidrachms (16 mils [Cc.]).

MIXTURE, LAFAYETTE. See Mixture Copaiba.

Mixture Licorice. See Mixture Glycyrrhiza Compound.

MIXTURE MAGNESIA, ASAFETIDA AND OPIUM.

Mistura Magnesiæ, Asafætidæ et Opii, N. F.; Dewees' Carminative. Each fluidounce contains about 23 grains magnesium carbonate, 36 minims tincture asafetida and 5 minims tincture opium. Carminative, Antidiarrheal. Average Dose: 2 fluidrachms (8 mils [Cc.]).

MIXTURE OIL TAR.

Mistura Olei Picis, N. F.; Tar Mixture. Containing oil tar (16.8 minims per fl. oz.), purified extract glycyrrhiza, sugar, chloroform, oil peppermint, alcohol and water. Expectorant. Average Dose: 2 fluidrachms (8 mils [Cc.]).

MIXTURE, OLEO-BALSAMIC.

Mistura Oleo-Balsamica, N. F. 1000 mils (Cc.) contain 4 mils each oils lavender, cinnamon, thyme, lemon and nutmeg, 4 eugenol, 16 balsam Peru, with alcohol. Carminative, Analeptic. Dose: 10 to 30 minims (0.6 to 2 mils [Cc.]).

MIXTURE OPIUM, ALKALINE. See Mixture Opium and Sassafras.

Mixture Opium and Chloroform Compound. See Tincture Opium Compound.

† MIXTURE OPIUM AND RHUBARB COMPOUND.

Mistura Opii et Rhei Composita, N. F.; Sun Cholera Mixture. Mixture of 1 volume tincture capsicum, 1 tincture rhubarb, 2 each tincture opium, spirit camphor, spirit peppermint and alcohol. Intestinal Astringent, Carminative. Average Dose: 30 minims (2 mils [Cc.]).

MIXTURE OPIUM AND SASSAFRAS.

Mistura Opii et Sassafras, N. F.; Godfrey's Cordial; Alkaline Mixture of Opium. Each fluidounce contains 1.6 grains opium, 4 grains potassium carbonate and 0.5 minim oil sassafras. Carminative, Sedative; in colic, diarrhea, etc. Average Dose: (infants'): 5 minims (0.3 mil [Cc.]).

MIXTURE, PARRISH'S. See Mixture Camphor Aromatic.

Mixture Pectoral (Stokes'), Squibb pint

Mistura Pectoralis Stokes, N. F.; Stokes' Expectorant. Each fluidounce represents 8 grains ammonium carbonate, 16 grains each senega and squill, and 84 minims camphorated tincture opium, with syrup tolu and water. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Mixture Rhubarb Alkaline, Squibb pint

Mistura Rhei Alkalina, N. F.; Syrup Rhubarb and Potassa Compound; Neutralizing Cordial. Each fluidounce represents about $7\frac{1}{2}$ grains each rhubarb and potassium carbonate, and $3\frac{3}{4}$ grains hydrastis, with tincture cinnamon, spirit peppermint, syrup and alcohol. Antacid, Stomachic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]). Incompatible with acids or alkaloidal salts.

MIXTURE RHUBARB AND POTASSIUM COMPOUND. See Mixture Rhubarb Alkaline.

Mixture Rhubarb and Soda. See Mixture Rhubarb Compound.

Mixture Rhubarb Compound, Squibb pint,

Mistura Rhei Composita, N. F.; Mixture Rhubarb and Soda. Each fluidounce contains about 16 grains sodium bicarbonate, 7.2 minims fluidextract rhubarb, 1.4 minims fluidextract ipecac, 168 minims glycerin, 16.8 minims spirit peppermint. Incompatible with acids and with solutions of alkaloidal salts. Stomachic, Antacid. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

(NOTE.—On request we will supply specially, in lots of 1 gallon or more Mixture Rhubarb Compound made in accordance with the original formula of Dr. E. R. Squibb. On such orders please specify "Original Squibb Formula.")

MIXTURE SASSAFRAS AND OPIUM. See Mixture Opium and Sassafras.

MIXTURE SODA AND SPEARMINT. See Solution Soda and Mint.

MIXTURE TAR. See Mixture Oil Tar.

Monobromethane. See Ethyl Bromide.

MONOBROMISOVALERYLUREA. See Bromural.

Monochlorethane. See Ethyl Chloride.

Monssel's Salt. See Iron Subsulphate.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Monsel's Solution. See Solution Iron Subsulphate.

†⊕ **Morphine, Squibb** 1/8-oz. vial,

Morphina. $C_{17}H_{19}O_3N.H_2O$. White, odorless, bitter prisms, needles or powder. 1 Gm. dissolves in 3340 mils (Cc.) water, 210 alcohol, 1220 chloroform, 6250 ether. Analgesic, Sedative, Hypnotic. **Average Dose:** 1/8 grain (0.008 Gm.). **Antidotes:** potassium permanganate; apomorphine hypodermically as emetic; atropine; strychnine or caffeine; strong hot coffee; exercise.

† **Morphine Acetate, Squibb** 1/8-oz. vial,

Morphinae Acetas, U. S. P. VIIIth Rev. $C_{17}H_{19}O_3N.C_2H_4O_2.3H_2O$. White or yellowish-white, bitter powder; faint acetous odor. Soluble in 2.25 parts water, 21.6 alcohol, 480 chloroform, 5.2 glycerin. Becomes less soluble on exposure. Incompatible in solution with alkalies, tannin, borax, bromides, chlorates, iodides, spirit nitrous ether, or mercury bichloride. **Average Dose:** 1/4 grain (0.015 Gm.). Keep well stoppered.

†⊕ **Morphine Hydrochloride, Squibb** 1/8-oz. vial,

Morphinae Hydrochloridum. $C_{17}H_{19}O_3N.HCl.3H_2O$. White, silky, odorless, bitter needles, cubes or powder. 1 Gm. dissolves in 17.5 mils (Cc.) water, 52 alcohol, 8 glycerin; insoluble in ether or chloroform.

†⊕ **Morphine Sulphate, Squibb**

Morphinae Sulphas. $(C_{17}H_{19}O_3N)_2.H_2SO_4.5H_2O$. White, feathery, silky, odorless, bitter flakes or cubes. 1 Gm. dissolves in 15.5 mils (Cc.) water, 565 alcohol; insoluble in ether or chloroform.

Mountain Balm. See Eriodictyon.

⊕ **MUCILAGE ACACIA.**

Mucilago Acaciae. 35 percent. acacia. Demulcent, but used chiefly pharmaceutically. Incompatible with alcohol, ether, ammonia and strongly alcoholic or ethereal fluid extracts and tinctures. **Average Dose:** 4 fluidrachms (16 mils [Cc.]). Readily becomes sour or mouldy, hence should be made frequently.

MUCILAGE CHONDRUS.

Mucilago Chondri, N. F.; Mucilage Irish Moss. 3 Gm. in 100 mils (Cc.). Emulsifier, Demulcent.

MUCILAGE SASSAFRAS PITH.

Mucilago Sassafras Medullae, N. F. 2 Gm. in 100 mils (Cc.). Emollient, Demulcent, Refrigerant. **Average Dose:** 4 fluid drachms (16 mils).

MUCILAGE TRAGACANTH.

Mucilago Tragacanthæ. 6 percent. tragacanth, 18 glycerin.
Excipient for troches, lozenges, etc.

MULLEIN FLOWERS.

Verbasci Flores, N. F. Dried corollas, with adhering stamens, of *Verbascum phlomoides* or of *V. thapsiforme* (Fam. *Scrophulariaceæ*). Demulcent, Vulnerary. **Average Dose:** 2 drachms (8 Gm.).

MULLEIN LEAVES.

Verbasci Folia, N. F. Demulcent, Anticatarrhal. **Average Dose:** 1 drachm (4 Gm.).

MULLS.

Mullæ; Salve Mulls. Ointments of high fusing points, spread on soft muslin or "mull." The following mulls are noted in N. F.:—

Acid Salicylic: 10%; *Creosote Salicylated*: 20% creosote, 10% salicylic acid; *Mercuric Chloride*: 0.2%; *Zinc*: 10% zinc oxide.

MUSK.

Moschus; Deer Musk; Tonquin Musk. Dried secretion from preputial follicles of *Moschus moschiferus* (Fam. *Moschidæ*). Irregular, blackish, shiny grains; peculiar penetrating, persistent odor; bitterish taste. Soluble in water to about 50 percent.; in alcohol, 10 percent. Antispasmodic, Analeptic; used largely in perfumery. **Average Dose:** 4 grains (0.25 Gm.).

MUSK-ROOT. See Sumbul.**Mustard, Powdered, Squibb**

tin, lb.

sprinkler-top tins, 4-oz., per doz.

2-oz., per doz.

Sinapis Alba; White, Yellow, or English Mustard. Ripe seed of *Sinapis alba*, carefully reduced to a coarse powder. Free from adulteration or added coloring-matter. Emetic, Counter-irritant; Condiment. **Average Dose:** 150 grains (10 Gm.), in lukewarm water. In making mustard plaster *cold water*, that is water at ordinary room temperature, should be employed to obtain satisfactory results. Boiling water destroys the enzyme which produces the useful volatile oil of mustard; hence a plaster made with it will not be active. For making *table mustard*, take: Squibb's Powdered Mustard, 3 teaspoonfuls; Table Salt, $\frac{1}{4}$ teaspoonful; Powdered Sugar, 1 teaspoonful; Cider Vinegar, 8 teaspoonfuls. Mix the first three ingredients well, then add the vinegar with constant stirring.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Myristica. See Nutmeg.

⊕ **Myrrh, Squibb** **Ground for Percolation** tin, lb.
Myrrha; Gum Myrrh. Gum-resin from *Commiphora Myrrha* and other species of *Commiphora* (Fam. *Burseraceæ*). Best quality, insuring perfect satisfaction in its use. Roundish or irregular, brownish-yellow to reddish-brown tears or masses; balsamic odor; aromatic, bitter and acrid taste. Astringent, Protective; Carminative. **Average Dose:** 8 grains (0.5 Gm.). (See Tincture.)

Naphthol, Beta-. See Betanaphthol.

⊕ **NEOARSPHENAMINE.**
 Neosalvarsan; Arsphenolamine-S. 3 Gm. equal 2 Gm. Arsphenamine in arsenic content. Orange-yellow powder; peculiar odor; unstable in air. Readily soluble in water. **Dose:** men, 12 grains (0.8 Gm.); women, 9 grains (0.6 Gm.); children, $2\frac{1}{2}$ to 5 grains (0.15 to 0.3 Gm.)—intravenously or by intramuscular injection.

NEOSALVARSAN. See Neoarsphenamine.

Nickel=Ammonium Sulphate Reagent. See Reagents (Part IV).

Nickel Nitrate Reagent. See Reagents (Part IV).

Nickel Sulphate Reagent. See Reagents (Part IV).

NIOFORM. See Vioform.

NITROGLYCERIN SPIRIT. See Spirit Glyceryl Trinitrate.

NOVARGAN.

Silver Proteinate. 10 percent. silver. Yellow powder. Soluble in water. Astringent, Bactericide; like silver nitrate. Used in 10 to 20 percent. solutions.

NOVASPIRIN.

Methylenecitylsalicylic Acid. White, odorless, acidulous powder. Soluble freely in alcohol; sparingly in chloroform, ether; almost insoluble in water. Antirheumatic, Antiseptic. **Dose:** 10 to 20 grains (0.65 to 1.3 Gm.).

NOVOCAIN. See Procaine.

NUCLEIN.

A modified nucleoprotein obtained by peptic digestion or treatment with dilute acids. Grayish-white powder. Soluble in dilute alkalis, slightly in water; insoluble in alcohol. Systemic Bactericide, Leucocytotic, Alterative. **Dose:** 8 to 15 grains (0.5 to 1 Gm.), 3 times daily.

NUTGALL.

Galla; Galls. Excrescence on *Quercus infectoria* and allied species (Fam. *Fagaceæ*), caused by punctures and deposited ova of *Cynips tinctoria*. Nearly odorless; strongly astringent taste. External and Internal Astringent. Average Dose: 8 grains (0.5 Gm.).

Nutmeg, Squibb

*Whole	tin, lb.	; ¼ lb.	; 2-oz., per doz.
Powdered			tin, lb.
		sprinkler-top tins, 4-oz., per doz.	
		2-oz., per doz.	
		1-oz., per doz.	

Myristica. Choice unsophisticated grade. Kernel of ripe seed of *Myristica fragrans* (Fam. *Myristicaceæ*). Aromatic, Carminative; Condiment. A method of adulterating nutmeg consists in extracting the oil by boring a hole through the middle, boiling with water and then closing the hole so carefully that the nutmeg may be sold without the fraud being detected. Average Dose: 8 grains (0.5 Gm.).

NUTROSE.

Casein-sodium. Obtained from freshly precipitated casein by action of sodium hydroxide. Coarse, white, odorless, nearly tasteless, alkaline powder. Soluble in water. Incompatible with acids. Nutritive. Dose: 2 to 4 drachms (8 to 16 Gm.).

⊕ Nux Vomica, Squibb

Ground for Percolation	tin, lb.
------------------------	----------

Nux Vomica; Quaker Buttons; Poison Nut. Dried, ripe seeds of *Strychnos Nux-vomica* (Fam. *Loganiaceæ*). Assays not less than 2.5 percent. total alkaloids. Bitter Stomachic, Tonic. Average Dose: 1 grain (0.065 Gm.). Antidotes: emetics; chloral hydrate with bromides per rectum; chloroform inhalation and artificial respiration if required. (See also Extract; Fluidextract; Tincture.)

Occult Blood Test Tablets. See under Tablets (Part II).

OIL ALMOND EXPRESSED.

Oleum Amygdalæ Expressum; "Oil Sweet Almond." Fixed oil from kernels of various varieties of *Prunus Amygdalus* (Fam. *Rosaceæ*). Clear, pale straw-colored, almost odorless liquid; bland taste. Miscible with ether, chloroform; slightly soluble in alcohol. Sp. gr. 0.910 to 0.915. Emollient, Demulcent, Nutrient, Laxative. Ordinary Dose: 4 fluidrachms (16 mls [Cc.]).

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

OIL ALLSPICE. See Oil Pimenta.

OIL ANISE.

Oleum Anisi. Volatile oil from ripe fruit of *Pimpinella Anisum* (Fam. *Umbelliferae*) or of *Illicium verum* (Star Anise; Fam. *Magnoliaceae*). Pale-yellow; characteristic odor; sweetish, aromatic taste. Sp. gr. 0.978 to 0.988. Solidifies at about 15° C. (59° F.). Soluble in about equal volume strong alcohol. Aromatic Carminative; Flavor. Average Dose: 3 minims (0.2 mil [Cc.]).

OIL BAY. See Oil Myrcia.

OIL BENNE. See Oil Sesame.

OIL BERGAMOT.

Oleum Bergamottae, N. F. Volatile oil expressed from rind of fresh fruit of *Citrus Aurantium Bergamia* (Fam. *Rutaceae*), containing not less than 36 percent. ester calculated as linalyl acetate. Green or greenish-yellow oil; fragrant odor; aromatic, bitter taste; sp. gr. 0.875 to 0.880. Soluble in 0.5 volume alcohol, 2 volumes 80-percent. alcohol. Used principally in perfumery and toilet preparations.

⊕ **Oil Betula, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Oil Sweet Birch. Volatile oil distilled from bark of *Betula lenta* (Fam. *Betulaceae*). Practically identical with oil gaultheria and methyl salicylate; colorless or nearly so; strong, aromatic odor; sweetish, warm, aromatic taste. Sp. gr. 1.172 to 1.182. Antirheumatic, Antipyretic; Flavor. Dose: 10 to 20 minims (0.6 to 1.2 mils [Cc.]).

Oil Birch. See Oil Betula.

OIL BIRCH TAR, RECTIFIED.

Oleum Betulae Empyreumaticum Rectificatum, N. F.; *Oleum Rusci Rectificatum*. Pyroligneous oil obtained by dry distillation of bark and wood of *Betula alba* (Fam. *Betulaceae*), rectified by steam distillation. Dark-brown oil; penetrating, empyreumatic odor like Russian leather; sp. gr. 0.886 to 0.950. Soluble in ether, chloroform; 3 volumes alcohol. Antiparasitic Dermic.

OIL BITTER ALMOND.

Oleum Amygdalae Amaræ. Volatile oil obtained by maceration and distillation of ripe kernels of *Prunus Amygdalus amara* (Fam. *Rosaceae*), yielding 85 percent. benzaldehyde and 2 to 4 percent. hydrocyanic acid. Clear, colorless or yellow oil; bitter-almond odor and taste; sp. gr. 1.038 to 1.060. Slightly soluble in water; miscible with alcohol or ether in all proportions. Cough Sedative, Antipruritic; Flavor. Average Dose: ½ minim (0.03 mil [Cc.]). Antidotes: hydrogen peroxide by mouth and subcutaneously; emetics; ammonia or atropine as stimulant.

Oil Bitter Almond, Artificial. See Benzaldehyde.

OIL BITTER ORANGE.

Oleum Aurantii Amari, N. F. Volatile oil expressed from fresh peel of bitter orange, *Citrus Aurantium amara* (Fam. Rutaceæ). Pale-yellow oil; orange odor; aromatic, slightly bitter taste; sp. gr. 0.842 to 0.848. Soluble in 4 volumes alcohol. Aromatic Flavor. Average Dose: 3 minims (0.2 mil [Cc.]). Oil bitter orange having a terebinthinate odor should not be dispensed.

OIL CADE.

Oleum Cadinum; Oil Juniper Tar. Empyreumatic oil obtained by dry distillation of wood of *Juniperus Oxycedrus* (Fam. Pinaceæ). Dark-brown, thick liquid; tarry odor; faintly aromatic, bitter, burning taste. Soluble in 3 volumes ether; in chloroform, oil turpentine, amyl alcohol; almost insoluble in water; partly soluble in alcohol. Epidermal Stimulant, Antiparasitic Dermic.

OIL CAJUPUT.

Oleum Cajuputi. Volatile oil from fresh leaves and twigs of several varieties of *Melaleuca Leucadendron* (Fam. Myrtaceæ). Colorless or yellowish; agreeable, camphoraceous odor; aromatic, slightly bitter taste. Sp. gr. 0.912 to 0.925. Miscible with alcohol. Counter-irritant, externally; Stimulant, Alterative, internally. Average Dose: 8 minims (0.5 mil [Cc.]).

Oil, Camphorated. See Liniment Camphor.

OIL CARAWAY.

Oleum Cari. Volatile oil from fruit of *Carum Carvi* (Fam. Umbelliferae). Colorless or pale-yellow; characteristic aromatic odor and taste. Sp. gr. 0.900 to 0.910. Yields about 50 volume percent. carvone. Soluble in equal volume alcohol, 8 volumes 80 percent. alcohol. Carminative, Aromatic, Corrigent. Average Dose: 3 minims (0.2 mil [Cc.])

OIL CARBOLIZED. See Oil Phenolated.

OIL CARDAMOM.

Oleum Cardamomi, N. F. Volatile oil distilled from seeds of *Elettaria Cardamomum* (Fam. Zingiberaceæ). Colorless, pale-yellow oil; aromatic, somewhat camphoraceous odor; persistent, pungent, strongly aromatic taste; sp. gr. 0.924 to 0.947. Soluble freely in alcohol; in 4 volumes 70-percent. alcohol. Aromatic, Carminative; Flavoring. Dose: 1 to 2 minims (0.06 to 0.12 mil [Cc.])

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

OIL, CARRON. See Liniment Lime.

⊕ OIL CASSIA.

Oleum Cassiæ; Oil Cinnamon. Volatile oil from *Cinnamomum Cassia* (Fam. *Lauraceæ*). Yields about 80 volume percent. cinnamic aldehyde. Yellowish or brownish, darkening and thickening with age; characteristic odor and taste of cinnamon. Sp. gr. 1.045 to 1.063. Carminative, Aromatic Flavor. Average Dose: 3 minims (0.2 mil [Cc.]).

⊕ Oil Castor, Squibb bottle, lb. ; ½ lb. ; ¼ lb.

Oleum Ricini. Fixed oil expressed from seeds of *Ricinus communis* (Castor Bean; Fam. *Euphorbiaceæ*). An exceptionally pure medicinal quality. Of much less disagreeable odor and taste than attend the regular market article, and perfectly reliable physiologically. Pale-yellowish or almost colorless, transparent, viscid liquid, of faint odor, and bland, later slightly acrid and offensive taste. Sp. gr. 0.945 to 0.965. Soluble in equal volume alcohol. Efficient and prompt Cathartic; useful also as initial purge in acute diarrheas. Average Dose: 4 fluidrachms (15 mils [Cc.]), between meals. Acts in 4 to 5 hours.

Oil Castor Aromatic, Squibb bottle, lb. ; ¼ lb.

Oleum Ricini Aromaticum, N. F. Preceding oil flavored with oil cinnamon, oil clove, vanillin and coumarin, and sweetened with benzosulphinide. Especially designed for children and for adults having a repugnance for plain castor oil.

⊕ OIL CHENOPODIUM.

Oleum Chenopodii; Oil American Wormseed. Volatile oil from *Chenopodium ambrosioides anthelminticum* (Fam. *Chenopodiaceæ*). Colorless or pale-yellow; disagreeable camphoraceous odor; pungent, bitter taste. Sp. gr. 0.955 to 0.980. Soluble in 8 volumes 70-percent. alcohol. Anthelmintic, especially for round worms and hookworms. Average Dose: 3 minims (0.2 mil [Cc.]).

OIL CINNAMON. See Oil Cassia.

⊕ OIL CLOVE.

Oleum Caryophylli. Volatile oil from flower-buds of *Eugenia aromatica*. *Jambosa Caryophyllus* (Fam. *Myrtaceæ*). Colorless or pale-yellow, becoming darker and thicker with age; strong aromatic odor; pungent taste; sp. gr. 1.038 to 1.060. Yields not less than 92 volume percent. of eugenol. Soluble in 2 volumes 70 percent. alcohol. Rubefacient, Counter-irritant, externally; Carminative, internally. Average Dose: 3 minims (0.2 mil [Cc.]).

⊕ Oil Cod Liver, Squibb

bottle, pint ; ½ pint ; ¼ pint

Oleum Morrhuae; Cod Oil. Fixed oil obtained from fresh livers of *Gadus morrhua* and other species of *Gadus* (Fam. *Gadidae*). A Norwegian oil, of highest purity obtainable; light-straw color, fresh and bland in taste, and extracted from the livers before decomposition has set in. It is consequently much superior medicinally to the dark-colored, rancid oils of common knowledge. It is imported from Norway in the colder months of the year and at once bottled in order to avoid even the start of rancidity. Therapeutically the Norway oil has been proved preferable to oils obtained from any other part of the world. Particular attention is called to the agreeable or rather not disagreeable odor and taste of this oil. Sp. gr. 0.918 to 0.922. Soluble readily in ether or chloroform, in 2 parts acetic ether, very slightly in alcohol. Alterative Tonic, Nutrient. Occasionally employed topically (in certain chronic skin diseases). **Average Dose:** 2½ fluidrachms (10 mils [Cc.]), two hours after meals, or at bedtime.

OIL CORIANDER.

Oleum Coriandri. Volatile oil from ripe fruit of *Coriandrum sativum* (Fam. *Umbelliferae*). Colorless or pale-yellow; spicy odor and taste; sp. gr. 0.863 to 0.875. Soluble in 3 volumes 70-percent. alcohol. Aromatic, Carminative. **Average Dose:** 3 minims (0.2 mil [Cc.]).

Oil Cotton=Seed, Squibb

bottle, lb.

Oleum Gossypii Seminis. Fixed oil expressed from seeds of cultivated varieties of *Gossypium herbaceum* and other species of *Gossypium* (Fam. *Malvaceae*). An especially purified product, particularly adapted to pharmaceutical and medicinal uses. Pale-yellow, odorless liquid, of bland, nut-like taste. Sp. gr. 0.915 to 0.921. Readily soluble in ether or chloroform, very sparingly in alcohol. Demulcent, Emollient, Nutrient; frequently used in place of olive oil in preparations for external use. **Dose:** 2 to 4 fluidrachms (8 to 16 mils [Cc.]).

⊕ OIL CROTON.

Oleum Tiglii. Fixed oil expressed from seeds of *Croton Tiglium* (Fam. *Euphorbiaceae*). Pale-yellow or brownish-yellow; slightly viscid and fluorescent; slight, fatty odor; mild, acrid, burning taste. Produces pustular eruption when applied to skin. Sp. gr. 0.935 to 0.950. Freely soluble in ether, chloroform, oils; slightly soluble in alcohol. Drastic Cathartic, Rubefacient, Vesicant. **Average Dose:** 1 minim (0.06 mil [Cc.]), on sugar or in pills with bread or other absorbent. **Antidotes:** bland oils, mucilage, atropine, cocaine.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

OIL CUBEBA.

Oleum Cubebæ. Volatile oil from unripe fruit of *Piper Cubeba* (Fam. *Piperacæ*). Colorless, pale-green or yellowish-green; characteristic odor; warm, camphoraceous taste; sp. gr. 0.905 to 0.925. Soluble in about equal volume alcohol. Stimulating Antiseptic, Expectorant, Urinary Anticatatarrhal. Average Dose: 8 minims (0.5 mil [Cc.]).

OIL CYPRESS.

Volatile oil from *Cupressus sempervirens*. Yellowish liquid; pleasant odor; sp. gr. 0.88 to 0.89. Soluble in alcohol. Antispasmodic; chiefly in whooping-cough by inhalation, a tablespoonful of 1:5 alcoholic solution being poured three or four times daily over pillow, gown and underwear.

Oil Ethereal, Squibb

g. s. bottle, oz.

Oleum Æthereum, N. F. Dropped from U. S. P. Not infrequently the composite, indeterminate residue from the ether still, and a nondescript distillate from grapes, are marketed as "oil of wine." The Squibb product is prepared from pure materials in absolute compliance with N. F. process and formula, and none of it that is not of uniform best quality is allowed to leave the laboratory. Transparent, nearly colorless, volatile liquid; aromatic, ethereal odor; pungent, refreshing, bitterish taste; sp. gr. about 0.905. An ingredient of Spirit Ether Compound (Hoffmann's Anodyne); not used by itself medicinally.

⊕ OIL EUCALYPTUS.

Oleum Eucalypti. Volatile oil from fresh leaves of *Eucalyptus globulus* or other species of *Eucalyptus* (Fam. *Myrtacæ*), yielding not less than 70 vol. percent. eucalyptol. Colorless or pale-yellow; spicy taste; sp. gr. 0.905 to 0.925. Soluble in 4 volumes 70-percent. alcohol. Antiseptic, Deodorant; largely used by inhalation as vapor or oil sprays in subacute and chronic inflammations of respiratory tract. Average Dose: 8 minims (0.5 mil [Cc.]).

OIL FENNEL.

Oleum Fœniculi. Volatile oil from ripe fruit of cultivated varieties of *Fœniculum vulgare* (Fam. *Umbelliferae*). Colorless or pale-yellow; characteristic odor; mild, sweetish, spicy taste; sp. gr. 0.953 to 0.973. Soluble in 8 volumes 80-percent. alcohol. Aromatic Carminative, Corrigent of griping action of cathartics. Average Dose: 3 minims (0.2 mil [Cc.]).

OIL GAULTHERIA. See Oil Betula and Methyl Salicylate.

OIL HYOSCYAMUS COMPOUND.

Oleum Hyoscyami Compositum, N. F. 1000 mils (Cc.) contain 2 mils each oils lavender, peppermint, rosemary and thyme, infused oil hyoscyamus q. s. Anodyne embrocation.

OIL JUNIPER.

Oleum Juniperi. Volatile oil from ripe fruit of *Juniperus communis* (Fam. *Pinaceæ*). Colorless or faintly green or yellow; characteristic odor; warm, aromatic, slightly terebinthinate, bitterish taste; sp. gr. 0.854 to 0.879. Soluble in 4 volumes alcohol (almost clearly). Irritant Diuretic, Carminative. Average Dose: 3 minims (0.2 mil [Cc.]).

OIL JUNIPER TAR. See Oil Cade.

OIL LAVENDER.

Oleum Lavandulæ. Volatile oil from fresh flowering tops of *Lavandula vera* (*L. officinalis*, *L. spica*; Fam. *Labiataë*). Colorless or yellow; fragrant odor; pungent, bitterish taste; sp. gr. 0.875 to 0.888. Soluble in 3 volumes 70 percent. alcohol. Aromatic, Stimulant, Tonic; Flavor, Perfume. Average Dose: 3 minims (0.2 mil [Cc.]).

OIL LEMON.

Oleum Limonis. Volatile oil obtained by expression from fresh peel of ripe fruit of *Citrus medica Limonum* (Fam. *Rutaceæ*). yielding not less than 4 percent. citral. Pale-yellow or greenish-yellow; fragrant odor; aromatic, slightly bitterish taste; sp. gr. 0.851 to 0.855. Stimulant, but used mainly as flavoring and in perfumery. Average Dose: 3 minims (0.2 mil [Cc.]). An oil having a terebinthinate odor should not be dispensed.

⊕ OIL LINSEED.

Oleum Lini; Raw Linseed Oil. Fixed oil expressed from linseed. Yellowish; slight odor; bland taste; thickens, darkens and acquires strong odor and taste on exposure; sp. gr. 0.925 to 0.935. Miscible with ether, chloroform, oil turpentine; slightly soluble in alcohol. Protective Emollient, Laxative. Average Dose: 1 fluidounce (30 mils [Cc.]). Boiled linseed oil must not be dispensed for medicinal use.

Oil Mineral. See Liquid Petrolatum.

⊕ OIL MUSTARD VOLATILE.

Oleum Sinapis Volatile. From black mustard, or synthetically. Yields not less than 92 percent. allyl isothiocyanate. Colorless or pale-yellow; very pungent, irritating odor; acrid taste; sp. gr. 1.013 to 1.020. Miscible with alcohol or ether. Vesicant, Counter-irritant; Stimulant. Average Dose: $\frac{1}{8}$ minim (0.008 mil [Cc.]), well diluted. Antidotes: demulcents; morphine for pain.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

OIL MYRCIA.

Oleum Myrciæ, N. F.; Oil Bay. Volatile oil distilled from leaves of *Pimenta acris* (Fam. *Myrtaceæ*). Yellow or brownish yellow liquid; pleasant, aromatic odor; pungent, spicy taste. Sp. gr. 0.962 to 0.990. Almost clearly soluble in equal volume alcohol. Used technically.

OIL MYRISTICA.

Oleum Myristicæ; Oil Nutmeg. Volatile oil distilled from kernel of ripe seed of *Myristica fragrans* (Fam. *Myristicaceæ*). Colorless or pale-yellow; characteristic odor; warm, spicy taste; sp. gr. 0.859 to 0.924. Soluble in equal volume alcohol, 3 volumes 90 percent. alcohol. Aromatic Carminative; flavoring. **Average Dose:** 3 minims (0.2 mil [Cc.]).

OIL NEROLI. See Oil Orange Flowers.

OIL NUTMEG. See Oil Myristica.

Oil Olive, Squibb

special bottle, pint, ; ½ pint, ; ¼ pint,

Oleum Olivæ. Fixed oil expressed from fruit of *Olea europæa* (Fam. *Oleaceæ*). The best quality of olive oil is obtained from olives picked before maturity and immediately pressed. It is then called "virgin oil" and has a greenish tinge. The residue of crushed olives left after extraction of the virgin oil is thrown into boiling water, which drives out the remaining oil, and this, together with the oil extracted from wholly ripe olives, constitutes the common oil for culinary purposes and for making soaps. The Squibb oil is virgin oil of especially fine flavor, imported from known sources and absolutely free from adulteration. Pale-yellow or light greenish-yellow; slight odor; nutty, oleaginous taste, with faintly acrid after-taste. Sp. gr. 0.910 to 0.915. Soluble readily in chloroform or ether, very sparingly in alcohol. Emollient, Laxative, Nutrient; latterly also recommended for restoring the opsonic index after narcotics and in other depressed conditions of the system. **Average Dose:** 1 fluidounce (30 mils [Cc.]), between meals; in hepatic colic, 3 to 6 fluidounces (90 to 180 mils)

OIL ORANGE.

Oleum Aurantii. Volatile oil expressed from fresh peel of sweet orange. Yellow; characteristic aromatic odor; orange taste; sp. gr. 0.842 to 0.846. Soluble in about 4 volumes alcohol. Carminative; aromatic flavoring. **Average Dose:** 3 minims (0.2 mil [Cc.]). An oil having a terebinthinate odor should not be dispensed.

OIL ORANGE FLOWERS.

Oleum Aurantii Florum, N. F.; Oil Neroli. Volatile oil distilled from fresh flowers of bitter orange, *Citrus Aurantium amara* (Fam. *Rutaceæ*). Pale-yellow oil; fragrant odor like orange blossoms; aromatic, sweet then bitter taste; sp. gr. 0.868 to 0.880. Soluble in equal volume alcohol, 2 volumes 80-percent. alcohol. Flavoring agent.

- ⊕ **Oil Peppermint, Squibb** bottle, lb. ; ¼ lb. ; oz.
Oleum Menthae Piperitæ. Volatile oil distilled from flowering plant of *Mentha piperita* (Fam. *Labiatae*), rectified by steam distillation. Colorless liquid; strong peppermint odor; marked aromatic, pungent taste, followed by sensation of cold when air is drawn through the mouth; sp. gr. 0.896 to 0.908. Soluble in 4 volumes 70-percent. alcohol. Aromatic Carminative; flavoring. **Average Dose:** 3 minims (0.2 mil [Cc.]), well diluted. (See also Spirit.)

OIL, PHENOLATED.

Oleum Phenolatum, N. F.; Carbolyzed Oil. Olive oil with 5 percent. phenol (Carbolic Acid). Mild Local Stimulant. Antipruritic.

OIL PHOSPHORATED.

Oleum Phosphoratum, N. F. 1 percent. phosphorus in expressed oil almond with little ether. Reconstructive, Anticachectic; chiefly in rickets. **Average Dose:** 1 minim (0.06 mil [Cc.]).

OIL PIMENTA.

Oleum Pimentæ; Oil Allspice. Volatile oil distilled from fruit of *Pimenta officinalis* (Fam. *Myrtaceæ*) yielding not less than 65 vol. percent. eugenol. Colorless, yellow or reddish, becoming darker with age; allspice odor and taste; sp. gr. 1.018 to 1.048. Soluble in equal volume 90 percent. alcohol, 2 volumes 70-percent. alcohol. Carminative; flavoring agent. **Average Dose:** 3 minims (0.2 mil [Cc.]).

OIL PINE NEEDLES.

Oleum Pini Pumilionis; Dwarf-Pine Oil. Volatile oil from fresh leaves of *Pinus Pumilio* (*Pinus montana*; Fam. *Pinaceæ*). Colorless or yellowish; pleasant odor; bitter, pungent taste; sp. gr. 0.853 to 0.869. Soluble in about 5 volumes alcohol. Antiseptic, Anticatarrhal, by inhalation or internally, in tuberculosis, chronic bronchitis, etc. **Dose:** 1 to 5 minims (0.06 to 0.3 mil [Cc.]).

OIL ROSEMARY.

Oleum Rosmarini. Volatile oil distilled from fresh flowering tops of *Rosmarinus officinalis* (Fam. *Labiatae*), yielding not less than 10 percent. borneol. Colorless or pale-yellow; characteristic pungent odor; warm, camphoraceous taste; sp. gr. 0.894 to 0.912. Soluble in 10 volumes 80-percent. alcohol; in ether. Carminative; aromatic flavoring. **Average Dose:** 3 minims (0.2 mil [Cc.]).

⊕ **OIL SANDALWOOD.**

Oleum Santali; Oil Yellow Sandalwood. Volatile oil distilled from wood of *Santalum album* (Fam. *Santalaceæ*), yielding not less than 90-percent. santalol. Pale-yellow, thick liquid; aromatic odor; pungent, spicy taste; sp. gr. 0.965 to 0.980. Soluble in 5 volumes 70-percent. alcohol. Urinary Disinfectant and Anticatarrhal. **Average Dose:** 8 minims (0.5 mil [Cc.]).

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

OIL SASSAFRAS.

Oleum Sassafras. Volatile oil distilled from *Sassafras variifolium* (Fam. *Lauraceæ*). Yellow or reddish-yellow; sassafras odor; warm aromatic taste; sp. gr. 1.065 to 1.077. Soluble in 2 volumes 90-percent. alcohol. Aromatic Carminative; Rubefacient; flavoring. **Average Dose:** 3 minims (0.2 mil [Cc.]).

OIL SESAME.

Oleum Sesami; Benne Oil. Fixed oil from seeds of cultivated varieties of *Sesamum indicum* (Fam. *Pedaliaceæ*). Pale-yellow; almost odorless; bland taste; sp. gr. 0.916 to 0.921. Miscible with ether, chloroform; slightly soluble in alcohol. Nutrient, Emollient; substitute for olive oil.

OIL SPEARMINT.

Oleum Menthæ Viridis. Volatile oil distilled from flowering plant of *Mentha spicata* (*M. viridis*; Fam. *Labiataë*). Colorless, yellow or greenish-yellow; strong, spearmint odor; hot, aromatic taste; sp. gr. 0.917 to 0.934. Aromatic Carminative; flavoring. **Average Dose:** 3 minims (0.2 mil [Cc.]).

OIL TAR RECTIFIED.

Oleum Picis Liquidæ Rectificatum. Volatile oil distilled from tar. Thick; dark reddish-brown; strong, empyreumatic odor and taste; sp. gr. 0.960 to 0.990. Soluble in alcohol, ether. Antiparasitic Dermic, Expectorant. **Average Dose:** 3 minims (0.2 mil [Cc.]).

⊕ Oil Theobroma, Squibb tin, lb.

Oleum Theobromatis; Cacao Butter. Fixed oil expressed from roasted seeds of *Theobroma Cacao*. Yellowish-white solid; faint, agreeable odor; bland, chocolate-like taste; melts at 30° to 35° C. Soluble readily in ether, chloroform, oils. Used pharmaceutically and technically; also as Emollient and Lubricant.

OIL THYME.

Oleum Thymi. Volatile oil distilled from flowering plant of *Thymus vulgaris* (Fam. *Labiataë*), containing not less than 20 vol. percent. phenols. Colorless or reddish; strong thyme odor; aromatic, pungent afterwards cooling taste; sp. gr. 0.894 to 0.930. Soluble in 2 volumes 80-percent. alcohol; in ether, chloroform. Rubefacient, Counter-irritant; Carminative. **Average Dose:** 3 minims (0.2 mil [Cc.]).

OIL TURPENTINE.

Oleum Terebinthinæ; "Spirits of Turpentine." Volatile oil distilled with water from concrete oleoresin obtained from *Pinus palustris* or other species of *Pinus* (Fam. *Pinaceæ*). Colorless; inflammable; characteristic odor and taste; sp. gr. 0.860 to 0.870. Soluble in 5 volumes alcohol. Rubefacient, Counter-irritant. (See also Liniment, and following oil.)

⊕ **Oil Turpentine Rectified, Squibb** bottle, lb.

Oleum Terebinthinæ Rectificatum. For medicinal use. Carefully selected, purified by thoroughly washing with solution of caustic soda and rectifying by distillation, only three-fourths of the oil being recovered. Only this rectified product should be dispensed when oil turpentine is required for internal use. Sp. gr. 0.856 to 0.865. Anthelmintic, Diuretic, Antiseptic, Carminative; in tympanitis, tapeworm, retention of urine, phosphorus poisoning, etc. **Average Dose:** 5 minims (0.3 mil [Cc.]); in tapeworm, 1 to 2 fluidrachms (4 to 8 mils).

Oil Wine. See under Oil Ethereal.

Oil Wintergreen. See Methyl Salicylate and Oil Betula.

Oil Wintergreen, Synthetic. See Methyl Salicylate.

OIL WORMSEED, AMERICAN. See Oil Chenopodium.

OILS, INFUSED.

Olea Infusa, N. F., are directed to be made by macerating 10 Gm. dried drug with 10 mils (Cc.) alcohol and 0.2 mil ammonia water for 6 hours, then adding 100 Gm. sesame oil and warming the mixture on water-bath at 60° to 70° C. until the alcohol and ammonia are dissipated.

OIL-SUGARS.

Oleosacchara, N. F., are directed to be made by triturating 2 mils (Cc.) of the volatile oil with 100 Gm. sugar.

OINTMENT (SIMPLE).

Unguentum. 20 percent. white wax. with benzoinated lard. Ointment base, Emollient.

⊕ **Ointment Acid Boric, Squibb** jar, lb. ; 1-oz. tubes

Unguentum Acidi Borici. 10 percent. boric acid, 5 paraffin, 85 white petrolatum. Antiseptic Vulnerary.

OINTMENT ACID CARBOLIC. See Ointment Phenol.

OINTMENT ACID TANNIC.

Unguentum Acidi Tannici. Simple ointment, with 20 percent. each tannic acid and glycerin. Astringent, Antiseptic.

OINTMENT, BASILICON. See Cerate Rosin.

⊕ **Ointment Belladonna, Squibb** jar, lb.

Unguentum Belladonnæ. 10 percent. extract belladonna leaves, with wool-fat and benzoinated lard. Anodyne.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

Ointment, Blue. See Ointment Mercury Diluted.

OINTMENT, BROWN.

Unguentum Fuscum, N. F.; Mother's Salve. 50 percent. camphorated brown plaster, 25 olive oil, 25 suet. Antiphlogistic, Discutient; in cellulitis, felons, boils, etc.

OINTMENT CALAMINE.

Unguentum Calaminæ, N. F.; Turner's Cerate. 17 percent. calamine, with simple ointment. Drying Antiseptic.

OINTMENT CAMPHOR.

Unguentum Camphoræ, N. F. 22 percent. camphor, with white wax and lard. Antipruritic, Anodyne.

OINTMENT CARBOLIC ACID. See Ointment Phenol.

⊕ **OINTMENT CHRYSAROBIN.**

Unguentum Chrysarobini. 6 percent. chrysarobin, with benzoinated lard. Antiparasitic. Should not be used on large surfaces; toxic!

Ointment, Citrine. See Ointment Mercury Nitrate.

Ointment Diachylon, Squibb jar, lb.

Unguentum Diachylon; Hebra's Lead Ointment. 50 percent. lead plaster, 49 white petrolatum, 1 oil lavender. Astringent Dermic.

Ointment, Hebra's Itch. See Ointment Sulphur Compound.

Ointment, Hebra's Lead. See Ointment Diachylon.

OINTMENT IODINE.

Unguentum Iodi. 4 percent. each iodine and potassium iodide, with glycerin and benzoinated lard. Discutient. Should not be dispensed unless recently prepared.

OINTMENT IODOFORM.

Unguentum Iodoformi. 10 percent. iodoform, with benzoinated lard. Vulnerary.

OINTMENT LEAD IODIDE. jar, lb. ; ½ lb. ; ¼ lb.

Unguentum Plumbi Iodidi, N. F. 10 percent. lead iodide, with benzoinated lard. Discutient, in indolent ulcers, swollen glands, etc.

⊕ **Ointment Mercury, Squibb** jar lb. ; ¼ lb.

Unguentum Hydrargyri; Mercurial Ointment. Mercury 50%, suet 35, lard 15. While the mercury content is as U. S. P. demands, a deviation from official formula has been made, to produce a better product. The oleate of mercury officially prescribed for extinguishing the mercury is omitted, as special apparatus accomplishes the desired result more effectually. As the rapid absorption of the mercury depends upon the fineness of subdivision, this mercurial ointment will be found to give particularly quick and reliable results. Endermic Antisyphilitic. Dose (by inunction): 1 drachm (4 Gm.), night and morning.

⊕ **Ointment Mercury Diluted, Squibb**

jar, lb. ; ¼ lb. ; ½-oz. tubes,

Unguentum Hydrargyri Dilutum; Blue Ointment. A thoroughly effected combination containing 30 percent. of metallic mercury (as against 33 percent. in U.S.P. VIIIth Rev.). Antiparasitic, Antiluetic. Dose (by inunction): 1½ drachms (6 Gm.) twice daily.

⊕ **OINTMENT MERCURY AMMONIATED.**

Unguentum Hydrargyri Ammoniatum; Ointment White Precipitate. 10 parts ammoniated mercury, 50 white petrolatum, 40 hydrous wool-fat. Antiparasitic Dermic. •

Ointment Mercury Ammoniated, 2%, Squibb

½-oz. tubes, per doz.

OINTMENT MERCURY CHLORIDE CORROSIVE, SPREAD. See Muls.

Ointment Mercury Nitrate, Squibb jar, lb. ; ¼ lb.

Unguentum Hydrargyri Nitratis; Citrine Ointment. This ointment will become comparatively hard in consistence on keeping, but practically no reduction of the mercuric nitrate takes place. Hardening of this ointment is evidence of formation of solid elaidin, and therefore proof of the purity of the materials used. It only requires gentle warmth or addition of a few drops of lard oil to bring it into a condition to be readily dispensed. Antiparasitic Dermic; in tinea capitis, impetigo, psoriasis, porrigo, etc.

OINTMENT MERCURY OXIDE RED.

Unguentum Hydrargyri Oxidi Rubri, N. F.; Red Precipitate Ointment. 10 percent. red oxide mercury, with hydrous wool-fat and petrolatum. Stimulant Vulnerary, Parasiticide; in eye diseases, indolent ulcers, etc.

⊕ **Ointment Mercury Oxide Yellow, Squibb**

jar, lb. ; ¼ lb.

Unguentum Hydrargyri Oxidi Flavi; Yellow Precipitate Ointment. 10 percent. yellow oxide of mercury, with wool-fat and petrolatum. In The Squibb Laboratories this ointment is made by precipitating a very finely divided yellow oxide of mercury from a solution of mercuric chloride. The precipitate is washed until it is free from chlorides, and the moist *magma* is used in preparing the ointment. This process has the advantage of yielding an ointment in which the oxide is in an extremely finely divided state, a condition not obtainable when the dry chemical is used, regardless of the method by which the dry salt may have been produced. Stimulant Antiseptic, chiefly in eye diseases.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Ointment Mercury Oxide Yellow 1%, Squibb

1/8-oz. collapsible tubes, each in wooden case, per doz.

Made from freshly precipitated mercuric oxide in the colloidal state; not from powder form of chemical. It contains latter in extremely fine form and thoroughly incorporated in a bland base. Ophthalmic Discutient.

Ointment Mercury Oxide Yellow, 2%, Squibb

1/8-oz. collapsible tubes, each in wooden case, per doz.

OINTMENT NUTGALL.

Unguentum Galliæ; Ointment Galls. 20 percent. powdered nutgall, in simple ointment. Astringent; in hemorrhoids, prolapsus ani, flabby ulcers, etc.

OINTMENT PHENOL.

Unguentum Phenolis; Ointment Carbolic Acid. 2 1/4 percent. liquefied phenol, with simple ointment. Wound Antiseptic, Antipruritic.

OINTMENT POTASSIUM IODIDE.

Unguentum Potassii Iodidi, N. F. Dropped from U. S. P. 10 percent., with 1 percent. sodium thiosulphate, in benzoinated lard. Discutient, Alterative; in scrofulous tumors, goitre, etc.

OINTMENT RED PRECIPITATE. See Ointment Mercury Oxide Red.

Ointment Resorcinol (Resorcin) Compound, Squibb

jar, lb. ; 1/4 lb.

Unguentum Resorcinolis Compositum, N. F. 6 percent. each resorcinol, zinc oxide, bismuth subnitrate, and rectified oil birch tar, with yellow wax, petrolatum, glycerin and wool-fat. Antiseptic and Astringent Dermic.

OINTMENT ROSE WATER.

Unguentum Aquæ Rosæ. Spermaceti 12.5 percent., white wax 12, expressed oil almond 56, borax 0.5, stronger rose water 19. Emollient; Ointment Base.

OINTMENT SALICYLATED CREOSOTE. See under Mulls.

OINTMENT SALICYLIC ACID, SPREAD. See under Mulls.

OINTMENT, SIMPLE. See Ointment.

OINTMENT STRAMONIUM.

Unguentum Stramonii. 10 percent. extract stramonium, with wool-fat and benzoinated lard. Anodyne; in irritable ulcers, painful hemorrhoids, etc.

⊙ Ointment Sulphur, Squibb jar, lb.

Unguentum Sulphuris. 15 percent. sublimed sulphur, with benzoinated lard. Antiparasitic, especially in scabies.

OINTMENT SULPHUR ALKALINE.

Unguentum Sulphuris Alkalinum, N. F. 20 percent. sublimed sulphur, 10 percent. potassium carbonate, with benzoinated lard. Antiparasitic, Antipruritic Dermic.

Ointment Sulphur Compound, Squibb jar, lb.

Wilkinson's Ointment; Hebra's Itch Ointment. Practically *Unguentum Sulphuris Compositum*, N. F., but made with wool-fat instead of lard. This modification prevents separation of the water contained in the soft soap, and thus yields a smooth and permanent ointment. Combination of precipitated calcium carbonate (10), sublimed sulphur (15), oil cade (15), soft soap (30), and anhydrous wool-fat (30). Antiparasitic, Antipruritic Dermic; especially in scabies.

OINTMENT TAR.

Unguentum Picis Liquidæ. Tar, 50 percent.; yellow wax, 15; lard, 35. Antiparasitic Dermic; in tinea capitis, psoriasis, etc.

OINTMENT TAR COMPOUND.

Unguentum Picis Compositum, N. F. Prepared from oil tar (4 percent.), tincture benzoin (2 percent.), zinc oxide (3 percent.), yellow wax, lard and cotton-seed oil. Antipruritic, Antiseptic Dermic; chiefly in ringworm, prurigo, chronic eczema.

OINTMENT VERATRINE.

Unguentum Veratrinæ, N. F.; dropped from U. S. P. 4 percent. veratrine, 6 expressed oil almond, with benzoinated lard. Counter-irritant, Anodyne. Use carefully; toxic!

OINTMENT WHITE PRECIPITATE. See Ointment Mercury Ammoniated.

Ointment, Wilkinson's. See Ointment Sulphur Compound.

Ointment Yellow Precipitate. See Ointment Mercury Oxide Yellow.

OINTMENT ZINC CARBONATE CRUDE. See Ointment Calamine.

⊕ Ointment Zinc Oxide, Squibb

jar, lb. ; 1-oz. tubes,

Made from special *lead-free* and *arsen-free* zinc oxide. Strength of official *Unguentum Zinci Oxidi*, 20 percent., but containing white petrolatum as base instead of benzoinated lard; latter causes ointment to become granular in appearance and rancid on long keeping. Antiseptic Astringent and Dermic Sedative; in inflammatory cutaneous diseases, chronic ophthalmia, etc.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

OINTMENT ZINC STEARATE.

Unguentum Zinci Stearatis, N. F. Equal parts zinc stearate and white petrolatum. Antiseptic Emollient and Protective Dermic.

Oleates.—All oleates change on long keeping, more rapidly when exposed. Therefore it is advisable to purchase in small quantities and frequently. The oleic acid we employ is particularly free from stearic acid. Hence the oleates of the Squibb Laboratories are very quickly absorbed and do not produce the disagreeable greasiness attending the use of ordinary oleates.

OLEATE ACONITINE.

Oleatum Aconitinæ, N. F. 2 percent. Local Anodyne; in neuralgia, painful joints, etc. Avoid abraded surfaces.

OLEATE ATROPINE.

Oleatum Atropinæ, N. F. 2 percent. atropine, in mixture of about equal parts oleic acid and olive oil. Anodyne, Antispasmodic; in whooping-cough, etc.

†OLEATE COCAINE.

Oleatum Cocainæ, N. F., 5 percent. cocaine. Local Anesthetic.

Oleate Mercury, Squibb bottle, $\frac{1}{4}$ lb. ; oz.

Oleatum Hydrargyri. 25 percent. yellow mercuric oxide. Antiluetic, Alterative; in syphilitic and scrofulous inflammations.

Oleate Quinine, Squibb bottle, $\frac{1}{4}$ lb. ; oz.

Oleatum Quininae, N. F.; 25 percent. quinine. Antiperiodic, by injunction.

OLEATE VERATRINE.

Oleum Veratrinæ, N. F.; 2 percent. veratrine, in mixture of about equal parts oleic acid and olive oil. Rubefacient, Anodyne; in scrofulous joints, sprains, etc.

Oleoresin	Aspidium, Squibb	bottle, oz.
-----------	------------------	-------------

Oleoresina Aspidii; Oleoresin or Extract Male Fern. It usually shows a crystalline deposit of filicic acid on standing, and in such cases should be well shaken before dispensing. Thick, olive-green liquid; bitter, disagreeable taste. Anthelmintic. **Average Dose:** according to U. S. P., 30 grains (2 Gm.). Some authorities recommend in *tænia solium* (the usual kind of tapeworm), 2½ to 3 fluidrachms (10 to 12 mls [Cc.]) in 3 portions half an hour apart, in capsules, followed, if necessary, in 2 hours by a cathartic, avoiding castor oil, however.

Oleoresin Capsicum, Squibb bottle, oz.

Oleo-resina Capsici; Oleoresin Red, Spanish or Cayenne Pepper. Rubefacient externally; Carminative and Gastric Stimulant internally. Usually applied diluted with soap liniment or oil; in lumbago, neuralgia, etc. **Average Dose:** $\frac{1}{2}$ grain (0.03 Gm.).

Oleoresin Cubeb, Squibb

bottle, oz.

Oleoresina Cubebæ. Expectorant, Anticatarrhal; in bronchitis and genito-urinary diseases. **Average Dose:** 8 grains (0.5 Gm.).
NOTE: Oleoresin Cubeb, on long standing, may deposit a waxy, crystalline substance; this the U. S. P. directs to be rejected, the liquid portion only being used.

Oleoresin Ginger, Squibb

bottle, oz.

Oleoresina Zingiberis. From best quality, peeled Jamaica ginger. Carminative, Stimulant. **Average Dose:** $\frac{1}{2}$ grain (0.03 Gm.).

OLEORESIN LUPULIN.

Oleoresina Lupulini, N. F. Bitter Tonic; also used as Nerve Sedative and Antispasmodic, in nervousness, bladder irritation, etc. **Average Dose:** 3 grains (0.2 Gm.).

Oleoresin Male Fern. See Oleoresin Aspidium.**OLEORESIN PARSLEY FRUIT.**

Oleoresina Petroselinæ; Liquid Apiol. Greenish, oily liquid. Soluble in alcohol, chloroform or ether; insoluble in water. Emmenagogue, Antiperiodic. **Average Dose:** 8 minims (0.5 mil [Cc.]), in capsules.

OLEORESIN PEPPER.

Oleoresina Piperis. Carminative, Stimulant; adjuvant to antipyretics and tonics. **Average Dose:** $\frac{1}{2}$ grain (0.03 Gm.).

† OPIUM.

Opium; Gum Opium. Air-dried, milky exudation obtained by incising unripe capsules of *Papaver somniferum* and its variety *album* (Fam. *Papaveraceæ*). Irregular, rounded, somewhat flattened masses or cakes; grayish-brown externally, dark-brown internally, plastic when fresh, of strong, narcotic odor, and bitter taste. Assays not less than 9.5 percent. anhydrous morphine. Analgesic, Cerebrospinal Depressant, Antispasmodic, Antiphlogistic. **Average Dose:** 1 grain (0.06 Gm.). **Antidotes:** potassium permanganate (2 grains in solution), emetics; atropine or strychnine hypodermically; hot strong coffee; exercise. (See also Extract; Tincture; Tablets [Part II].)

† OPIUM DEODORIZED.

Opium Deodoratum; Denarcotized Opium. Assays 10 to 10.5 percent. anhydrous morphine. Action like that of opium, without narcotic effect. **Average Dose:** 1 grain (0.065 Gm.). **Antidotes:** as of opium.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

† **Opium Granulated, Squibb** bottle, oz.
Opium Granulatum. Assays 10 to 10.5 percent, anhydrous morphine. Used for making tincture opium and tincture deodorized opium.

† ⊕ **Opium Powdered, Squibb** bottle, oz.
Opii Pulvis. Assays 10 to 10.5 percent, anhydrous morphine (equivalent to 10.64 to 11.17 percent, crystallized morphine), as against 12 to 12.5 percent, crystallized morphine in U. S. P. VIIIth Rev. **Average Dose:** 1 grain (0.065 Gm.). **Antidotes:** see opium.

Opodeldoc, Liquid. See Liniment Soap.

Opodeldoc, Solid. See Liniment Soap Camphorated.

ORANGE PEEL, BITTER.

Aurantii Amari Cortex. Dried rind of unripe fruit of *Citrus Aurantium amara* (Fam. *Rutaceæ*). Aromatic Bitter Stomachic; flavoring agent. **Average Dose:** 15 grains (1 Gm.).

ORANGE PEEL, SWEET.

Aurantii Dulcis Cortex. Outer rind of fresh, ripe fruit of *Citrus Aurantium sinensis* (Fam. *Rutaceæ*). Flavoring agent. (See also Fluidextract; Tincture.)

ORPHOL. Brand of Bismuth Betanaphtholate.

ORRIS ROOT.

Iris, N. F. Rhizome of *Iris florentina*, *I. germanica*, or *I. pallida* (Fam. *Iridaceæ*), peeled and dried. Violet-like odor; slightly aromatic, bitterish taste. Masticatory; used largely in perfumery and tooth powders.

ORTHOFORM.

Orthoform New. Methyl Metaamidoparaoxybenzoate. $C_6H_3-NH_2.OH.CO.O.CH_3$. White, inodorous, tasteless, neutral powder. Soluble in 6 parts alcohol, 50 ether; sparingly in water. Local Anesthetic, Analgesic. **Dose:** 8 to 15 grains (0.5 to 1 Gm.). Used topically pure or with milk sugar, or as ointment.

OUABAIN.

Crystallized Strophanthin; G-Strophanthin. $C_{30}H_{46}O_{12}.9H_2O$. Glucoside from *Acocanthera ouabaio*, or as now commonly prepared, from *Strophanthus gratus*. Colorless, bitter crystals. Soluble in about 100 parts water or alcohol; slightly in ether or chloroform. Used in place of strophanthus or strophanthin as substitute for digitalis, by intramuscular or intravenous injection. **Dose:** $1/120$ grain (0.0005 Gm.) once in 24 hours.

OVARY SUBSTANCE, DRIED.

1 Gm. represents about 6 Gm. fresh gland. Yellowish powder; peculiar odor. Partially soluble in water. Alterative, in disorders following menopause. **Dose:** 1 to 3 grains (0.06 to 0.2 Gm.) three times daily.

OXGALL.

Fel Bovis. Fresh bile of the ox, *Bos taurus* (Fam. *Bovidae*). Brownish-green or dark-green, somewhat viscid liquid; peculiar odor; disagreeable, bitter taste; sp. gr. 1.015 to 1.025. Used for making extract of and purified oxgall. (See these titles.)

⊕ Oxgall Purified, Squibb

* Pilular

Powdered

glass jar, oz.

bottle, oz.

Fel Bovis Purificatum, U. S. P. VIIIth Rev.; Purified Oxgall; Inspissated Oxgall; *Fel Tauri Purificatum*. Fresh ox-bile, purified with alcohol and concentrated to pilular consistence, or dried and reduced to powder. Yellowish-green, soft solid, or powder; peculiar odor, partly sweet and partly bitter taste. Freely soluble in water or alcohol. Intestinal Antiseptic, Cholagogue, Laxative; in typhoid fever, intestinal indigestion, deficient biliary secretion, etc. Dose: 5 to 10 grains (0.3 to 0.65 Gm.), in capsules or tablets. (See also Tablets [Part II].).

⊕ OXYGEN.

Oxygenium, O. Colorless, odorless, tasteless gas. Soluble in 34 volumes water, 3.6 alcohol. Antidyspneic, Sustenant; in asphyxia, carbon monoxide poisoning, etc.

OXYMEL SQUILL.

Oxymel Scillæ, N. F. 50 percent. vinegar squill, with clarified honey. Expectorant, Emetic. Average Dose: 1 fluidrachm (4 mils [Cc.]); children's Emetic, 1 fluidrachm, at short intervals. Incompatible with alkaline salts.

⊕ Pancreatin, Squibb bottle, lb. ; ¼ lb. ; oz.

Pancreatinum. Mixture of enzymes naturally existing in pancreas of warm-blooded animals, and obtained from fresh pancreas of the hog (*Sus scrofa*) or the ox (*Bos taurus*). It contains principally amylopsin, trypsin and steapsin, and under pharmacopœial conditions is capable of converting not less than 25 times its own weight of starch into substances soluble in water; also digests casein of milk and emulsifies fats. Cream-colored, amorphous powder; faint, not unpleasant odor; meat-like taste. Slowly and incompletely soluble in water; insoluble in alcohol. Digestive; used largely for predigestion of protein and starchy foods. Incompatible with pepsin, mineral acids in greater concentration than 0.5 percent., concentrated alkalies, alcohol. Average Dose: 8 grains (0.5 Gm.).

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

† PANTOPON.

Mixture of hydrochlorides of opium alkaloids as found in opium. Assays 50 percent. anhydrous morphine hydrochloride. Yellowish-gray, bitter powder. Readily soluble in water. Succedaneum for opium; used also hypodermically. **Dose:** $\frac{1}{12}$ to $\frac{1}{3}$ grain (0.005 to 0.02 Gm.).

PAPAIN.

Papayotin; Vegetable Pepsin. Digestive principle of juice of *Carica Papaya* (Papaw). Acts best in weak alkaline solution. Whitish powder. Soluble in water and glycerin; insoluble in alcohol, chloroform, ether. **Dose:** 2 to 5 grains (0.13 to 0.3 Gm.), with sodium bicarbonate. Externally, in fissured tongue and diphtheria, in 5 percent. glycerino-aqueous solution.

Paper, Litmus. See Litmus Paper.

PAPER, POTASSIUM NITRATE.

Charta Potassii Nitratis, N. F. Strips of paper soaked with 20% solution potassium nitrate and dried. Burned, and fumes inhaled in paroxysms of asthma.

Paprika Powdered, Squibb	tin lb.	;
	4-oz. sifter-top tins, per doz.	;
	2-oz. sifter-top tins, per doz.	;
	1-oz. sifter-top tins, per doz.	.

A variety of red pepper largely employed as spice; less pungent and of richer flavor than capsicum.

PARACOTO.

Paracoto, N. F.; Coto. Bark of unidentified tree indigenous to Northern Bolivia. Strong odor; pungent, nutmeg-like taste. Intestinal Astringent. **Average Dose:** 5 grains (0.3 Gm.). (See also Fluidextract.)

⊕ PARAFFIN.

Paraffinum. Purified mixture of solid hydrocarbons from petroleum. White, odorless, tasteless mass. Soluble freely in ether, benzin, carbon disulphide, volatile oils; insoluble in water or alcohol. Sp. gr. about 0.900; melting-point 50° to 57° C. Used in surgery for prosthetic purposes, and in pharmacy for raising melting-point of ointments.

Paraffin Liquid. See Liquid Petrolatum.

PARAFORMALDEHYDE.

Paraformaldehydum; Paraform; Trioxymethylene. $(\text{HCHO})_3$. White friable masses or powder; slight formaldehyde odor. Slowly soluble in water; insoluble in alcohol, ether. Intestinal Antiseptic, Escharotic (in 10 percent. suspension in collodion). Used chiefly to generate formaldehyde by heating, for disinfection. **Average Dose:** 8 grains (0.5 Gm.). **NOTE:** Its internal use seems inadvisable since it has produced serious results.

⊕**Paraldehyde, Squibb.** bottle, lb. ; ¼ lb. ; oz.

Paraldehydum. $C_6H_{12}O_3$. Polymer of acetaldehyde. Colorless, transparent liquid; strong, pungent odor; burning, cooling taste. Sp. gr. about 0.990. 1 Gm. dissolves in 8 mls (Cc.) water; in all proportions alcohol, ether, chloroform, oils. Prompt, fairly active Hypnotic and Sedative, devoid of serious side-effects; in nervous insomnia, alcoholism, asthma, insanity, etc. **Average Dose:** 30 minims (2 mls [Cc.]), well diluted.

PARATHYROID GLAND DRIED.

1 Gm. represents 6 Gm. fresh gland. Light-yellow powder; peculiar odor. Partially soluble in water. Antispasmodic, Nervine; in tetany following removal of parathyroid glands, paralysis agitans, chorea, etc. **Dose:** $\frac{1}{20}$ to $\frac{1}{10}$ grain (0.003 to 0.006 Gm.) three or four times daily.

Paregoric. See Tincture Opium Camphorated.

PAREIRA.

Pareira, N. F.; Pareira Brava. Dropped from U. S. P. Dried root of *Chondodendron tomentosum* (Fam. *Menispermaceæ*). Of slight odor; bitter taste. Bitter Tonic; used also as Diuretic and Alterative. **Average Dose:** 30 grains (2 Gm.).

PARRISH'S CAMPHOR MIXTURE. See Mixture Camphor Aromatic.

PARSLEY FRUIT

Petroselinum; Parsley Seed, Dried ripe fruit of *Petroselinum sativum* (Fam. *Umbelliferæ*). Used as Emmenagogue in form of its oleoresin.

PARSLEY ROOT.

Petroselinum Radix, N. F. Dried root of *Petroselinum sativum* (Fam. *Umbelliferæ*). Aromatic odor; sweetish, pungent taste. Carminative. **Average Dose:** 30 grains (2 Gm.).

PASSION FLOWER.

Passiflora, N. F. Dried herb of *Passiflora incarnata* (Fam. *Passifloraceæ*). Slight odor and taste. Used in insomnia. **Average Dose:** 3 grains (0.2 Gm.).

PASTE BETANAPHTHOL.

Pasta Betanaphtholis, N. F.; Lassar's Naphthol Paste. Betanaphthol 10 percent., precipitated sulphur 50, petrolatum 20, soft soap 20. Antiparasitic, Antipruritic Dermic.

PASTE, DEXTRINATED.

Pasta Dextrinata, N. F. White dextrin 33 percent., glycerin 33, water 34. Basis for dermatologic pastes.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

PASTE, LONDON. See Soda with Lime.

PASTE PENCILS.

Stili Dilubiles, N. F.; Unna's Paste Pencils. For direct application in dermatological practice. Base consists of starch, dextrin, tragacanth, sugar and water; medicament, 10 percent.

PASTE RESORCINOL, MILD.

Pasta Resorcinolis Mitis, N. F.; Lassar's Mild Resorcin Paste. Resorcin 10 percent., zinc oxide 25, starch 25, light liquid petrolatum 40.

PASTE RESORCINOL, STRONG.

Pasta Resorcinolis Fortis, N. F.; Lassar's Stronger Resorcin Paste. Resorcinol 20 percent., zinc oxide 20, starch 20, light liquid petrolatum 40. Antiparasitic, Astringent Dermic.

PASTE SULPHURATED ZINC.

Pasta Zinci Sulphurata, N. F.; Unna's Sulphurated Zinc Paste. Zinc oxide 15 percent., precipitated sulphur 10, purified siliceous earth 5, benzoinated lard 70. Siccative, Antiparasitic Dermic.

PASTE ZINC.

Pasta Zinci, N. F.; Lassar's Zinc Paste. Salicylic acid 2 percent., zinc oxide 24, starch 24, petrolatum 50. Astringent, Antiseptic Dermic.

PASTE ZINC, SOFT.

Pasta Zinci Mollis, N. F.; Unna's Soft Zinc Paste. Zinc oxide, precipitated calcium carbonate, linseed oil, lime water; each 25 percent. Astringent, Drying Dermic.

⊕ PELLETIERINE TANNATE.

Pelletierinæ Tannas; Punicine Tannate. Natural mixture of tannates of four alkaloids from pomegranate. Light-yellow, odorless, amorphous powder; astringent taste. 1 Gm. dissolves in 240 mils (Cc.) water, 16 alcohol, 420 ether; insoluble in chloroform. Anthelmintic. Average Dose: 4 grains (0.25 Gm.).

PELLITORY ROOT. See Pyrethrum.

Pepper, Black, Squibb

*Powdered

Whole

tin, lb.

tin, lb.

sprinkler-top tins, 4-oz., per doz.

2-oz., per doz. ; 1-oz., per doz.

Piper. Dried unripe fruit of *Piper nigrum* (Fam. *Piperacæ*). First quality, absolutely unsophisticated. Contains 1 to 2 percent. volatile oil. Condiment; Carminative, Stomachic, to relieve flatulence and excite gastric digestion. Average Dose: 8 grains (0.5 Gm.).

Pepper, Cayenne. See Pepper, Red.

⊕ **Pepper, Red, Squibb** tin lb.
 (Powdered) sprinkler-top tins, 4-oz., per doz.
 2-oz., per doz. ; 1-oz., per doz.

Capsicum; Red, Pod, Spanish or Cayenne Pepper. Dried ripe fruit of *Capsicum frutescens* (Fam. *Solanaceæ*). Best African capsicum, called "African Bird Pepper," purchased upon chemical assay, the yield of oleoresin being approximately 20 percent. Rubefacient externally; Stimulant Stomachic, Condiment, internally. **Average Dose:** 1 grain (0.065 Gm.).

Pepper, Spanish. See Pepper, Red.

Pepper, Special Blend, Squibb tin lb.
 (Powdered) 1/4-lb. sifter-top tins, per dozen,
 2-oz. sifter-top tins, per dozen,
 1-oz. sifter-top tins, per dozen,

A carefully adjusted blend of white and black peppers producing an article of distinctive flavor different from that of any of the ingredients separately.

Pepper, White, Squibb tin, lb.
 (Powdered) sprinkler-top tins, 4-oz., per doz.
 2-oz., per doz. ; 1-oz., per doz.

Prepared by depriving the black seed of its outer skin, by soaking in water and rubbing. The berry is then dried. It has less of the peculiar qualities of pepper than the black berry. **Ordinary Dose:** 10 grains (0.65 Gm.).

⊕ **PEPPERMINT.**

Mentha Piperita. Dried leaves and flowering tops of *Mentha piperita* (Fam. *Labiataæ*). Carminative; flavoring. **Average Dose:** 60 grains (4 Gm.). (See also Oil; Spirit.)

⊕ **Pepsin 1:3000, Squibb** bottle, lb. ; 1/4 lb. ; oz.
 * Powder, Scales or Granular

Pepsinum. Proteolytic ferment or enzyme obtained from glandular layer of fresh stomachs of healthy pigs (*Sus scrofa*). Capable of digesting not less than 3,000 times its own weight of freshly coagulated egg albumin, under the conditions outlined in U. S. P. Slightly hygroscopic, almost odorless scales or grains, or white or cream-colored powder, without offensive odor, and of slightly acid or saline taste. Soluble almost entirely in about 50 parts water, more freely in water acidulated with hydrochloric acid; nearly insoluble in alcohol, chloroform, ether. Digestive internally; Solvent of false membranes or

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

⊕ **Pepsin, 1:3000, Squibb (Cont.)**

gangrenous tissue, externally. **Average Dose:** 8 grains (0.5 Gm.). Incompatible with tannic and gallic acids and their compounds; much alcohol; alkalies or alkali carbonates and alkaline earths; and it should not be prescribed with mineral acids exceeding 0.5 percent. in strength. (See also Essence; Glycerite; Tablets [Part II].)

Pepsin Saccharated, Squibb

bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Pepsinum Saccharatum, N. F. 10 percent. pepsin, with sugar of milk. **Average Dose:** 15 grains (1 Gm.).

PEPSIN, VEGETABLE. See Papain.

Peptone Meat Dry, Squibb

bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

From fresh, lean beef. 1 Gm. represents 10 Gm. lean beef. Brown powder, or light-brown granules. Soluble in water. Culture medium in bacteriology; Nutrient in gastric ulcer, etc. **Dose:** 30 to 60 grains (2 to 4 Gm.).

Peptonizing Powder. See Powder Pancreatin Compound.

Peptonizing Tubes, Squibb box of 12 tubes

Each contains 25 grains compound pancreatin powder, enough to peptonize 1 pint fresh milk according to directions given on label.

Peruvian Bark. See Cinchona.

PETROLATUM (YELLOW).

Petrolatum; Petroleum Jelly; Paraffin Ointment. Purified mixture of semi-solid hydrocarbons obtained from Petroleum. Yellowish to light-amber, nearly odorless and tasteless, unctuous mass. Sp. gr. 0.820 to 0.865. Readily soluble in ether, chloroform, oil turpentine. Emollient, Ointment Base.

PETROLATUM, WHITE.

Petrolatum Album. Preceding article wholly or nearly decolorized.

Petrolatum Liquid. See Liquid Petrolatum.

PETROLATUM JELLY. See Petrolatum (Yellow).

PETROXOLIN, LIQUID.

Petroxolinum Liquidum, N. F.; Liquid Petrox; Petrolatum Saponatum Liquidum, N. F. III. Light liquid petrolatum saponified with ammonium oleate extemporaneously made. Yellowish-brown liquid, miscible with ether, chloroform or acetone, and yielding emulsion with 2 volumes water. Penetrating solvent vehicle for creosote, iodine, iodoform, etc., for endermic medication.

PETROXOLIN, SOLID.

Petroxolinum Spissum, N. F.; Solid Petrox; Petrolatum Saponatum Spissum, N. F. III. Similar to preceding, but semi-solid. Ointment vehicle, for endermic medication.

PETROXOLINS (MEDICATED).

With two exceptions, solutions in liquid petroxolin, for endermic medication. Following are noted in N. F.: *Petroxolin Betanaphthol*, 10%; *Petroxolin Cade*, 25%; *Petroxolin Chloroform Camphorated*: chloroform 25%, camphor 25%; *Petroxolin Creosote*, 20%; *Petroxolin Eucalyptol*, 20%; *Petroxolin Guaiacol*, 20%; *Petroxolin Mercury*: 13% mercury, 13% wool-fat, 2% oleic acid, 55% solid petroxolin; *Petroxolin Iodine*, 10%; *Petroxolin Iodine Diluted*, 5%; *Petroxolin Iodoform*: 3% iodoform, 3% eucalyptol; *Petroxolin Menthol*, 17%; *Petroxolin Methyl Salicylate*, 20%; *Petroxolin Phenol*, 5%; *Petroxolin Phenol Camphorated*: 12.5% phenol, 37.5% camphor; *Petroxolin Tar*: 25% oil tar; *Petroxolin Sulphur*: 3% sulphur; *Petroxolin Sulphur Compound*: 10% sulphur, 10% oil cade, 0.3% thymol, 3% eucalyptol, 30% oil turpentine; *Petroxolin Venice Turpentine*, 20%.

Phenacetin. See Acetphenetidin.

Phenazone. See Antipyrine.

Phenol (Crystals), Squibb bottle, lb.

Phenol; Carboic Acid; Phenic or Phenylic Acid. Hydroxybenzene obtained from coal-tar or synthetically. Contains not less than 97 percent. C_6H_5OH . 1 Gm. dissolves in about 15 mls (Cc.) water; freely soluble in alcohol, ether, chloroform, glycerin, oils. Antiseptic, Germicide, Local Anæsthetic, Caustic; also Reagent. **Average Dose:** 1 grain (0.065 Gm.) in pills or well diluted. Coagulates collodion. Triturated with acetanilid, butyl-chloral hydrate, camphor, monobromated camphor, chloral hydrate, lead acetate, menthol, naphthalene, naphthol, phenacetin, pyrogallie acid, resorcin, salol, thymol, urethane or terpin hydrate, phenol yields a liquid or a soft mass. **Antidotes:** alcohol or whiskey freely at once, then emetics; soap; siphonage of stomach; soluble sulphates; demulcents.

PHENOL IODIZED.

Phenol Iodatum, N. F., Iodized Carboic Acid. 20 percent. iodine, 60 phenol, 20 glycerin. Antiseptic, Escharotic; applied pure.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

⊕ **Phenol Liquefied, Squibb** bottle, lb. .
Phenol Liquefactum; Liquefied Carbolic Acid. Crystalline product liquefied by heat and adjusted with distilled water to strength of 87 percent. absolute phenol. **Average Dose:** 1 minim (6.06 mil [Cc.]).

⊕ **Phenolphthalein, Squibb** bottle, oz.
Phenolphthaleinum; Dihydroxyphthalophenone. $C_{20}H_{14}O_4$. White or yellowish-white, crystalline powder. 1 Gm. dissolves in 13 mils (Cc.) alcohol, 70 ether; almost insoluble in water. Indicator; latterly recommended as an agreeable, tasteless mild but efficient Laxative. **Average Dose:** $2\frac{1}{2}$ grains (0.15 Gm.). (See also Tablets [Part II].)

Phenylacetamide. See Acetanilid.

Phenyldimethylpyrazolon. See Antipyrine.

⊕ **Phenyl Salicylate, Squibb** carton, lb. ; $\frac{1}{4}$ lb. ; oz.
Phenylis Salicylas; Salol. $C_{13}H_{10}O_3$. Nearly white powder; slight, aromatic odor and taste. 1 Gm. dissolves in 6670 mils (Cc.) water, 6 alcohol; very soluble in ether, chloroform, and oils. Intestinal Antiseptic; in typhoid fever, fermentative dyspepsia, grip, cystitis, etc.; also used for coating enteric pills. **Average Dose:** 5 grains (0.5 Gm.), 1 to 3 hours after meals. Incompatible on trituration with camphor, monobromated camphor, chloral hydrate, phenol, euphorin, naphthalene, thymol, or urethane. Keep in cool place; it melts at about 41° C. (105.8° F.). (See also Tablets [Part II].)

⊕ **PHOSPHORUS.**
Phosphorus. P. Translucent, nearly colorless solid, of waxy luster; disagreeable odor and taste; emits fumes on exposure; often takes fire spontaneously on long exposure, hence must be kept under water; sp. gr. 1.830 at 10° C. 1 Gm. dissolves in about 400 mils (Cc.) dehydrated alcohol, 17 chloroform, 102 absolute ether; sparingly soluble in fixed oils; almost insoluble in water. Stimulant of bone formation, rickets, caries, etc.; also used in melancholia, impotence, etc. **Average Dose:** $\frac{1}{120}$ grain (0.0005 Gm.).

⊕ **PHYSOSTIGMA.**
Physostigma; Calabar Bean. Dried ripe seeds of *Physostigma venenosum* (Fam. Leguminosæ), yielding not less than 0.15 percent. alkaloids. Antitetic, Peristaltic, Antineuralgic. **Average Dose:** $1\frac{1}{2}$ grains (0.1 Gm.). (See also Tincture.)

Physostigmine, Squibb 5-grain vial
 Eserine. $C_{15}H_{21}O_2N_3$. Alkaloid from calabar bean. Colorless, very hygroscopic crystals, upon exposure to air turning to reddish mass. Soluble in alcohol, ether, chloroform. Antitetic, Peristaltic, Antineuralgic. **Ordinary Dose:** $\frac{1}{64}$ grain (0.001 Gm.). **Antidotes:** emetics; atropine or strychnine subcutaneously; pilocarpine; chloral hydrate; stimulants.

⊕ **Physostigmine Salicylate, Squibb**

15-gr. vial ; 10-gr. vial ; 5-gr. vial

Physostigminæ Salicylas; Eserine Salicylate. $C_{15}H_{21}O_2N_3 \cdot C_7H_6O_3$. Colorless or faintly yellowish, odorless crystals; slightly bitter taste. Reddens on exposure. 1 Gm. dissolves in 75 mls (Cc.) water, 16 alcohol, 6 chloroform, 250 ether. Antitetanic, Peristaltic, Myotic; in tetanus, strychnine poisoning, neuralgia, torpidity of bowels, etc. Average Dose: $\frac{1}{64}$ grain (0.001 Gm.). Applied to eye in 0.2 to 0.5 percent. solution.

Physostigmine Sulphate, Squibb

15 grains ; 10 grains ; 5 grains ;
3 grains, ; 2 grains ; $1\frac{1}{2}$ grains ; 1 grain

Physostigminæ Sulphas, U. S. P. VIIIth Rev.; Eserine Sulphate. $(C_{15}H_{21}O_2N_3)_2 \cdot H_2SO_4$. White or yellowish white, odorless, bitter powder. Very deliquescent; prone to redden on keeping. Soluble in 1200 parts ether; freely in water, alcohol, chloroform. Action, uses, etc., like physostigmine alkaloid. Applied to eye in 0.2 to 0.5 percent. solution.

PHYTOLACCA.

Phytolacca, N. F.; Poke Root. Dried root of *Phytolacca decandra* (Fam. *Phytolaccaceæ*). Average Dose: alterative, $1\frac{1}{2}$ grains (0.1 Gm.); emetic, 15 grains (1 Gm.). (See also Fluidextract.)

PILLS.

We formerly offered a number of pills at the time used to some extent, but latterly they have been superseded largely by *tablets*, so that we have discontinued them in favor of the tablet form. Practically all of them will be found among the Tablets in Part II of this book. The following being official formulas, are here described for the sake of reference:

PILLS, AIKEN'S TONIC. See Pills Iron, Quinine, Strychnine and Arsenic, Mild.

PILLS ALOES.

Pilulæ Aloes. 2 grains each aloes and soap. Cathartic. Average Dose: 2 pills.

PILLS ALOES AND ASAFETIDA.

Pilulæ Aloes et Asafetidæ, N. F. About $1\frac{3}{8}$ grains each aloes, asafetida, soap. Laxative Nervine. Average Dose: 1 pill.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

PILLS ALOES AND IRON.

Pilulæ Aloes et Ferri, N. F. $11\frac{1}{12}$ grains each aloes, dried iron sulphate and aromatic powder. Laxative, Emmenagogue. Average Dose: 2 pills.

PILLS ALOES AND MASTIC.

Pilulæ Aloes et Mastiches, N. F.; Lady Webster's Dinner Pills. 2 grains aloes, with about $\frac{3}{5}$ grain mastic; $\frac{1}{2}$ grain rose. Laxative, Stomachic. Average Dose: 2 pills.

PILLS ALOES, MERCURY AND PODOPHYLLUM.

Pilulæ Aloes, Hydrargyri et Podophylli, N. F.; Triplex Pills, N. F. III. 2 grains aloes, 1 grain mercury mass, $\frac{1}{4}$ grain resin podophyllum. Cholagogue Cathartic. Average Dose: 1 pill.

PILLS ALOES, MERCURY AND SCAMMONY COMPOUND.

Pilulæ Aloes, Hydrargyri et Scammonii Compositæ, N. F.; Francis's Triplex Pills; Pills Scammony Compound. About $\frac{5}{6}$ grain each aloes, resin scammony, and mercury mass; $\frac{1}{20}$ minim croton oil; $\frac{1}{4}$ minim oil caraway; massed with tincture aloes and myrrh. Drastic Purgative, Cholagogue. Average Dose: 1 pill.

PILLS ALOES AND MYRRH.

Pilulæ Aloes et Myrrhæ, N. F.; Rufus's Pills. Aloes 2 grains, myrrh almost 1 grain, aromatic powder $\frac{2}{3}$ grain. Laxative, Carminative. Average Dose: 2 pills.

PILLS ALOES AND PODOPHYLLUM COMPOUND.

Pilulæ Aloes et Podophylli Compositæ, N. F.; Janeway's Pills. 1 grain aloes, $\frac{1}{2}$ grain resin podophyllum, $\frac{1}{4}$ grain each extracts belladonna leaves and nux vomica. Laxative. Average Dose: 2 pills.

PILLS ALOIN COMPOUND.

Pilulæ Aloini Compositæ, N. F. $\frac{1}{2}$ grain aloin, $\frac{1}{8}$ grain resin podophyllum, $\frac{1}{4}$ grain extract belladonna leaves. Cathartic. Average Dose: 1 pill.

PILLS ALOIN, STRYCHNINE AND BELLADONNA.

Pilulæ Aloini, Strychninæ et Belladonnæ, N. F. Contains $\frac{1}{5}$ grain aloin, $\frac{1}{120}$ grain strychnine, $\frac{1}{8}$ grain extract belladonna leaves. Tonic Laxative. Average Dose: 1 pill.

PILLS ALOIN, STRYCHNINE AND BELLADONNA COMPOUND.

Pilulæ Aloini, Strychninæ et Belladonnæ Compositæ, N. F. $\frac{1}{5}$ grain aloin, $\frac{1}{120}$ grain strychnine, $\frac{1}{8}$ grain extract belladonna leaves. $\frac{1}{2}$ grain extract cascara sagrada. Tonic Laxative. Average Dose: 1 pill.

PILLS, ANTIBILIOUS. See Pills Cathartic Compound.

PILLS, ANTIDYSPEPTIC.

Pilulæ Antidyspepticæ, N. F. $\frac{1}{40}$ grain strychnine, $\frac{1}{10}$ grain each ipecac and extract belladonna leaves, 2 grains each mercury mass and compound extract colocynth. Cholagogue, Tonic Laxative. Average Dose: 1 pill.

PILLS ANTIMONY COMPOUND.

Pilulæ Antimonii Compositæ, N. F.; Plummer's Pills. About $\frac{3}{5}$ grain each sulphurated antimony and calomel, $1\frac{1}{4}$ grains guaiac, massed with castor oil. Alterative, Diaphoretic. Average Dose: 1 pill.

PILLS, ANTIPERIODIC.

Pilulæ Antiperiodicæ, N. F.; Warburg's Pills. The National Formulary includes the following two modifications:

With Aloes: 1 grain extract aloes, $\frac{1}{2}$ grain each rhubarb and angelica, $\frac{1}{4}$ grain each elecampane, saffron and fennel, $\frac{1}{8}$ grain each zedoary, cubeb, myrrh, white agaric and camphor, $1\frac{2}{5}$ grains quinine sulphate. Average Dose: 1 pill, three times daily.

Without Aloes: same as preceding, except that the extract aloes is omitted. Average Dose: 1 pill, three times daily.

PILLS ASAFETIDA.

Pilulæ Asafetidæ. 3 grains asafetida. Nerve Sedative, Antispasmodic; in hysteria, whooping cough, asthma, etc. Average Dose: 2 pills.

PILLS, BLANCARD'S. See Pills Iron Iodide.

PILLS, BLAUD'S. See Pills Iron Carbonate.

PILLS, CATHARTIC COMPOUND.

Pilulæ Catharticæ Compositæ; Antibilious Pills. $1\frac{1}{4}$ grains compound extract colocynth, about 1 grain calomel, $\frac{1}{3}$ grain resin jalap, $\frac{1}{4}$ grain gamboge. Average Dose: 2 pills.

PILLS, CATHARTIC VEGETABLE.

Pilulæ Catharticæ Vegetabiles, N. F. Contain 1 grain compound extract colocynth, $\frac{1}{2}$ grain extract hyoscyamus, $\frac{1}{4}$ grain extract leptandra, $\frac{1}{3}$ grain resin jalap, $\frac{1}{4}$ grain resin podophyllum. Average Dose: 2 pills.

PILLS, CHALYBEATE. See Pills Iron Carbonate.

PILLS, CHAPMAN'S. See Pills, Dinner.

PILLS COCHIA. See Pills Colocynth Compound.

PILLS, COLE'S. See Pills, Dinner.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

PILLS COLOCYNTH COMPOUND.

Pilulæ Colocynthis Compositæ, N. F.; Cochia Pills. Contain $\frac{1}{8}$ grain extract colocynth, 2 grains each aloes and resin scammony, $\frac{1}{4}$ minim oil cloves. Hydragogue Cathartic. Average Dose: 1 pill.

PILLS COLOCYNTH AND HYOSCYAMUS.

Pilulæ Colocynthis et Hyoscyami, N. F. Contain $\frac{1}{10}$ grain extract colocynth, $\frac{1}{2}$ grains each aloes, resin scammony and extract hyoscyamus, $\frac{1}{6}$ minim oil cloves. Cathartic. Average Dose: 1 pill.

PILLS COLOCYNTH AND PODOPHYLLUM.

Pilulæ Colocynthis et Podophylli, N. F. Contain $2\frac{1}{2}$ grains compound extract colocynth and $\frac{1}{4}$ grain resin podophyllum. Hydragogue Cathartic. Average Dose: 1 pill.

PILLS DIGITALIS, SQUILL AND MERCURY.

Pilulæ Digitalis, Scillæ et Hydrargyri, N. F.; Niemeyer's Diuretic Pills; Guy's Pills. 1 grain each digitalis, squill, mercury mass. Average Dose: 1 pill.

PILLS, DINNER.

Pilulæ ad Prandium, N. F. Stomachic, Laxative. Average Dose: 1 pill. The National Formulary describes the following: Chapman's: $1\frac{1}{2}$ grains each aloes and mastic, 1 grain ipecac, $\frac{1}{4}$ grain oil fennel.

Cole's: $1\frac{1}{5}$ grains each aloes, mercury mass and jalap, $\frac{1}{50}$ grain tartar emetic.

Hall's: 1 grain each aloes, extract glycyrrhiza and soap.

Lady Webster's: See Pills Aloes and Mastic.

PILLS, FERRUGINOUS. See Pills Iron Carbonate.

PILLS, FRANCIS'S TRIPLEX. See Pills Aloes, Mercury and Scammony Compound.

PILLS GLONIN. See Pills Nitroglycerin.

PILLS, GRIFFITH'S. See Pills Iron Carbonate.

PILLS, GUY'S. See Pills Digitalis, Squill and Mercury.

PILLS, HALL'S. See under Pills, Dinner.

⊕ PILLS IRON CARBONATE.

Pilulæ Ferri Carbonatis; Bland's Pills; Griffith's Pills; Iron Pills; Ferruginous or Chalybeate Pills. 1 grain ferrous carbonate. Hematinic. Average Dose: 2 pills.

PILLS IRON IODIDE.

Pilulæ Ferri Iodidi; Blancard's Pills. 1 grain ferrous iodide, with powdered extract licorice, sugar and acacia, coated with solution balsam tolu. Alterative, Hematinic. Average Dose: 2 pills.

PILLS IRON, QUININE, ALOES AND NUX VOMICA.

Pilulæ Ferri, Quininae, Aloes et Nucis Vomicae, N. F.; Quadruplex Pills, N. F. III; Pills Iron and Quinine Compound. 1 grain each dried ferrous sulphate, quinine sulphate and aloes, $\frac{1}{4}$ grain extract nux vomica. Used as Tonic. **Average Dose:** 1 pill.

PILLS IRON, QUININE, STRYCHNINE AND ARSENIC.

Two strengths are recognized by National Formulary. (1) *Stronger* (Metallic Pills; Bitter Metallic Pills): 1 grain each reduced iron and quinine sulphate, $\frac{1}{20}$ grain each strychnine and arsenous acid. (2) *Mild* (Aiken's Tonic Pills): $\frac{3}{4}$ grain reduced iron, 1 grain quinine sulphate, $\frac{1}{50}$ grain each strychnine and arsenous acid. Tonic. **Average Dose:** 1 pill.

PILLS, JANEWAY'S. See Pills Aloes and Podophyllum Compound.

PILLS, LADY WEBSTER'S. See Pills Aloes and Mastic.

PILLS LAXATIVE COMPOUND.

Pilulæ Laxativæ Compositæ, N. F. About $\frac{1}{5}$ grain aloin, $\frac{1}{130}$ grain strychnine, $\frac{1}{8}$ grain extract belladonna leaves, $\frac{1}{16}$ grain ipecac. Laxative. **Average Dose:** 2 pills.

PILLS LAXATIVE POST-PARTUM.

Pilulæ Laxativæ Post-Partum, N. F.; Barker's Post-Partum Pills. $12\frac{2}{3}$ grains compound extract colocynth, $\frac{5}{6}$ grain aloes, $\frac{5}{12}$ grain extract nux vomica, $\frac{1}{12}$ grain each resin podophyllum and ipecac, $1\frac{1}{4}$ grains extract hyoscyamus. Cathartic for lying-in women. **Average Dose:** 1 pill.

PILLS METALLIC. See Pills Iron, Quinine, Strychnine and Arsenic, Stronger.

PILLS, NIEMEYER'S DIURETIC. See Pills Digitalis, Squill and Mercury.

PILLS, NIEMEYER'S PHTHISIS. See Pills Opium, Digitalis and Quinine.

*** PILLS NITROGLYCERIN.**

Pilulæ Glycerylis Nitratis, N. F.; Pills Glonoin. $\frac{1}{100}$ grain nitroglycerin. Antispasmodic, Vaso-dilator. **Average Dose:** 1 pill.

† PILLS OPIUM AND CAMPHOR.

Pilulæ Opii et Camphoræ, N. F. 1 grain powdered opium, 2 grains camphor. Intestinal Astringent and Anodyne, Antispasmodic. **Average Dose:** 1 pill.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

†PILLS OPIUM, DIGITALIS AND QUININE.

Pilulæ Opii, Digitalis et Quininae, N. F.; Niemeyer's Phthisis Pills. About $\frac{1}{6}$ grain powdered opium, 1 grain digitalis, 1 grain quinine sulphate. **Average Dose:** 1 pill.

†PILLS OPIUM AND LEAD.

Pilulæ Opii et Plumbi, N. F. 1 grain each powdered opium and lead acetate. Antidiarrheal. **Average Dose:** 1 pill.

PILLS PHOSPHORUS.

Pilulæ Phosphori. $\frac{1}{100}$ grain phosphorus. Nerve Stimulant, Reconstructive. **Average Dose:** 1 pill. **Antidotes:** potassium permanganate solution, emetics; charcoal.

PILLS, PLUMMER'S. See Pills Antimony Compound.

PILLS POST-PARTUM, BARKER'S. See Pills Laxative, Post-Partum.

PILLS QUADRUPLEX. See Pills Iron, Quinine, Aloes and Nux Vomica.

PILLS RHUBARB.

Pilulæ Rhei, N. F. About 3 grains rhubarb, 1 grain soap. Bitter Tonic, Stomachic. **Average Dose:** 1 pill.

PILLS RHUBARB COMPOUND.

Pilulæ Rhei Compositæ. 2 grains rhubarb, $1\frac{1}{2}$ grains aloes, 1 grain myrrh, with oil peppermint as corrective. Laxative. **Average Dose:** 2 pills.

PILLS, RUFUS'S. See Pills Aloes and Myrrh.

PILLS SCAMMONY COMPOUND.

See Pills Aloes, Mercury and Scammony Compound.

PILLS TRIPLEX. See Pills, Aloes, Mercury and Podophyllum.

PILLS VEGETABLE COMPOUND. See Pills, Cathartic, Vegetable.

PILLS, WARBURG'S. See Pills Antiperiodic.

⊕ **Pilocarpine Hydrochloride, Squibb**

15-grain vial, ; 10-grain vial, ; 5-grain vial,

Pilocarpinae Hydrochloridum. $C_{11}H_{16}O_2N_2.HCl$. Colorless, odorless, faintly bitter, hygroscopic crystals. 1 Gm. dissolves in 0.3 mil (Cc.) water, 3 mils alcohol, 366 chloroform; insoluble in ether. Incompatible with iodides, calomel, alkalies. Sialagogue, Galactagogue, Diaphoretic; Myotic externally. **Average Dose:** $\frac{1}{6}$ grain (0.01 Gm.); hypodermic, $\frac{1}{12}$ grain (0.005 Gm.). **Antidotes:** tannin, emetics; atropine; ammonia; brandy later. Keep well stoppered.

⊕ **PILOCARPINE NITRATE.**

Pilocarpinae Nitras. $C_{11}H_{16}O_2N_2.HNO_3$. Colorless, odorless, faintly bitter crystals. 1 Gm. dissolves in 4 mils (Cc.) water, 75 alcohol; insoluble in chloroform, ether. **Dose:** as preceding.

PILOCARPUS.

Pilocarpus; Jaborandi. Dried leaflets of *Pilocarpus Jaborandi* or *P. microphyllus* (Fam. Rutaceæ). Assays not less than 0.6 percent. alkaloids. Diuretic, Diaphoretic, Galactagogue. (See also Fluidextract.)

Pimenta. See Allspice.

PIMPINELLA.

Pimpinella, N. F. Dried rhizome and roots of *Pimpinella Saxifraga* or of *P. magna* (Fam. Umbelliferae). Aromatic odor; sweetish, pungent, acrid taste. Formerly used as Diuretic Diaphoretic, Stomachic. Average Dose: 15 grains (1 Gm.).

PINEAL GLAND DRIED.

Pineal gland of young cattle, freed from connective and other tissue, dried and powdered. 1 Gm. represents about 7 Gm. fresh gland. Used in backward mental development of children, mongolism, etc. Dose: 1/20 to 1/10 grain (0.003 to 0.006 Gm.) three times daily.

PINKROOT. See Spigelia.

PIPSISSEWA. See Chimaphila.

PITUITARY BODY DESICCATED. See Hypophysis Desiccated.

PLASTER, ADHESIVE. See Plaster Rosin.

⊕ PLASTER BELLADONNA.

Emplastrum Belladonnæ. Adhesive plaster carrying 30 percent. extract belladonna leaves. Assays 0.35 to 0.4 percent. alkaloids. Anodyne.

PLASTER, BROWN, CAMPHORATED.

Emplastrum Fuscum Camphoratum, N. F.; Camphorated Mother Plaster. Red oxide lead, olive oil, wax and camphor. Antiphlogistic, Discutient.

PLASTER, BLISTERING. See Plaster Cantharides.

PLASTER CANTHARIDES.

Emplastrum Cantharides; Blistering Plaster. Cerate cantharides spread upon rosin plaster. Epispastic.

PLASTER CAPSICUM.

Emplastrum Capsici. Oleoresin capsicum spread over rubber plaster. Rubefacient, Counter-irritant.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

PLASTER DIACHYLON. See Plaster Lead.

PLASTER, ELASTIC.

Emplastrum Elasticum; Rubber Plaster; Rubber Adhesive Plaster. Mixture of rubber, resins and waxes, with a filler of absorbent powder such as orris root or starch, mechanically mixed and spread upon cotton cloth or other fabric.

PLASTER LEAD.

Emplastrum Plumbi; Diachylon Plaster. Now made from lead oxide, olive oil and lard, instead of lead acetate and soap, as previously officially directed. Antiphlogistic.

PLASTER, MOTHER, CAMPHORATED. See Plaster Brown Camphorated.

⊕ PLASTER MUSTARD.

Emplastrum Sinapis; Mustard Paper. Mixture of powdered black mustard and rubber solution, spread on paper, cotton cloth or other fabric. Rubefacient, Counterirritant.

PLASTER ROSIN.

Emplastrum Resinæ; Adhesive Plaster; Rosin Adhesive Plaster. Mixture of rosin (14), lead plaster (80), and yellow wax (6).

PLASTER RUBBER ADHESIVE. See Plaster Elastic.

PLASTER SOAP.

Emplastrum Saponis, N. F. 10 percent. soap, 90 percent. lead plaster. Antiphlogistic, Discutient.

PLEURISY ROOT. See *Asclepias*.

PLUMMER'S PILLS. See Pills Antimony Compound.

Podophyllin. See Resin Podophyllum.

PODOPHYLLUM.

Podophyllum; Mandrake; May Apple Rhizome. Dried rhizome and roots of *Podophyllum peltatum* (Fam. *Berberidaceæ*), yielding not less than 3 percent. resin. Slight odor; sweetish-bitter, acrid taste. Slow but effective and rather irritant Cathartic. (See also Fluidextract; Resin.)

Poison Nut. See *Nux Vomica*.

POKE ROOT. See *Phytolacca*.

POMEGRANATE.

Granatum. Dried bark of stems and roots of *Punica Granatum* (Fam. *Punicaceæ*). Anthelmintic. Average Dose: 30 grains (2 Gm.).

POPPY CAPSULES.

Papaveris Fructus, N. F. Dried, fully grown, unripe fruit of *Papaver Somniferum* (Fam. *Papaveraceæ*). Weak opiate. Average Dose: 60 grains (4 Gm.).

Potassa. See Potassium Hydroxide.

Potassa Sulphurated, Squibb bottle, lb. ; ¼ lb.

Potassa Sulphurata; Pure Liver of Sulphur; so-called Potassium Sulphide. Hard, brown, brittle masses; odor of hydrogen sulphide; bitter, acrid, alkaline taste. Soluble in water (incompletely). Alterative, Antiparasitic Dermic. Dose: 2 to 10 grains (0.13 to 0.65 Gm.). On exposure it absorbs moisture, carbon dioxide and oxygen, and becomes changed.

POTASSA WITH LIME.

Potassa cum Calce, N. F.; Vienna Caustic or Lime. Equal parts potassium hydroxide and calcium oxide (quicklime). Caustic. Keep well-stoppered, in dry place.

⊕ **Potassium Acetate, Squibb** bottle, lb. ; ¼ lb.

Potassii Acetas. $KC_2H_3O_2$. To prevent contamination by metallic impurities, the entire process of manufacture, including the evaporation, is conducted in *stoneware* vessels. Best medicinal quality, free from discoloration. White, odorless, very deliquescent powder; warming, saline taste. 1 Gm. dissolves in 0.5 mil (Cc.) water, 2.9 mils alcohol. Systemic Alkali, Diuretic; in dropsy, gout, rheumatism, eczema, etc. Average Dose: 15 grains (1 Gm.), in sweetened solution. (See also Reagents [Part IV].)

Potassium Benzoate, Squibb bottle, oz.

$KC_7H_5O_2.3H_2O$. White, crystalline powder. Soluble in water and alcohol. Mild Antiseptic. Dose: 10 to 20 grains (0.65 to 1.3 Gm.).

⊕ **Potassium Bicarbonate, Squibb**

carton, lb. ; ¼ lb.

Potassii Bicarbonas. $KHCO_3$. A recrystallized, especially pure quality, for medicinal and pharmaceutical uses. White, odorless, granular salt; saline, slightly alkaline taste. 1 Gm. dissolves in 2.8 mils (Cc.) water; almost insoluble in alcohol. Boiling changes it to carbonate. Mild Alkali employed in dyspepsia, dropsy, jaundice, etc. Average Dose: 15 grains (1 Gm.). (See also Tablets [Part II]; Reagents [Part IV].)

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

Potassium Bichromate. See Potassium Dichromate.

Potassium Binoxalate, Squibb bottle, lb. ; ¼ lb.

Sal Acetosella; Salt of Sorrel. $\text{KHC}_2\text{O}_4 \cdot \text{H}_2\text{O}$. White crystals. Soluble in water. Used for technical purposes. **Antidotes:** lime water, magnesia; emetics.

Potassium Bisulphate Reagent. See Reagents (Part IV).

⊕ **Potassium Bitartrate, Squibb**

(Powdered) tin, lb. ; ¼ lb.

Potassii Bitartras; Cream of Tartar; Depurated Tartar. $\text{KHC}_4\text{H}_4\text{O}_6$. This salt is frequently found largely adulterated. The article here offered complies with the most rigid medicinal and pharmaceutical requirements. White, odorless powder; pleasant, acidulous taste. 1 Gm. dissolves in 155 mls (Cc.) water, 8820 alcohol. Boric acid or borax increases aqueous solubility. Diuretic, Aperient, Refrigerant. **Average Dose:** diuretic, 30 grains (2 Gm.); aperient, 120 to 240 grains (8 to 16 Gm.). (See also Reagent [Part IV].)

Potassium Bromate Reagent. See Reagents (Part IV).

⊕ **Potassium Bromide, Squibb** bottle, lb. ; ¼ lb.

Potassii Bromidum. KBr . White, odorless, granular powder; very salty taste. 1 Gm. dissolves in 1.5 mls (Cc.) water, about 250 alcohol, 4.6 glycerin. Incompatible with mineral acids; with salts of lead, mercury and silver; etc. Nerve Sedative, Antispasmodic; also Reagent. **Average Dose:** 15 grains (1 Gm.). Absorbed and eliminated slowly, and when long continued should be omitted for a few days in every month.

POTASSIUM BROMIDE, GRANULAR EFFERVESCENT.

Sal Potassii Bromidi Effervescens, N. F. About 16.6 percent. potassium bromide. **Average Dose:** 90 grains (6 Gm.).

POTASSIUM BROMIDE, GRANULAR EFFERVESCENT COMPOUND.

Sal Potassii Bromidi Effervescens Compositus, N. F.; formerly official as Potassium Bromide Effervescent Granular, with Caffeine. 8.3 percent. potassium bromide, 0.8 percent. caffeine, 4.2 percent. lithium carbonate. **Average Dose:** 90 grains (6 Gm.).

⊕ **Potassium Carbonate, Squibb**

(Powdered) bottle, lb. ; ¼ lb.

Potassii Carbonas; Sal Tartar. K_2CO_3 . White, odorless, granular, very deliquescent powder; strongly alkaline taste. 1 Gm. dissolves in 0.9 mil (Cc.) water; insoluble in alcohol. Caustic, Antipruritic, Antacid. Used in acid dyspepsia, lithiasis, jaundice, etc. **Average Dose:** 15 grains (1 Gm.). (See also Reagents [Part IV].)

⊕ **Potassium Chlorate, Squibb**

(Granular)

tin, lb. ; ¼ lb.

Potassii Chloras. KClO_3 . A special Squibb product, representing the U. S. P. market grade recrystallized and further purified; hence a distinctive product. White, odorless, granules; saline taste. 1 Gm. dissolves in 11.5 mils (Cc.) water; soluble in glycerin; almost insoluble in alcohol. Alterative, Antisialagogue, Antiseptic, Astringent. **Average Dose:** 4 grains (0.25 Gm.). Applied externally in 3 to 5 percent. solution, or ointment or dusting powder; as mouthwash and gargle, on ulcers, etc. Large doses are poisonous, causing disintegration of blood corpuscles. Incompatible with potassium iodide and tartaric acid. Dangerous explosions may occur when it is heated or subjected to concussion or trituration with organic substances (cork, tannin, sugar, etc.) or with sulphur, antimony sulphide, phosphorus or easily oxidizable substances. **Antidotes:** emetics; diuretics; ice; opium; pilocarpine; caffeine subcutaneously. (See also Tablets and Troches [Part II]; Reagents [Part IV].)

Potassium Chloride, Squibb

bottle, ¼ lb.

Potassii Chloridum, N. F. KCl . White, odorless crystals or granules. 1 Gm. dissolves in 2.8 mils (Cc.) water; insoluble in alcohol. Uses technical. (See also Reagents [Part IV].)

Potassium Chromate, Squibb

bottle, ¼ lb.

K_2CrO_4 . Yellow crystals. Soluble in water. Indicator in volumetric analysis. **Antidotes:** magnesia; emetics; alkaline carbonates. (See also Reagents [Part IV].)

⊕ **Potassium Citrate, Squibb**

bottle, lb. ; ¼ lb.

Potassii Citras. $\text{K}_3\text{C}_6\text{H}_5\text{O}_7 \cdot \text{H}_2\text{O}$. White, odorless, granular powder; cooling, saline taste. 1 Gm. dissolves in 0.6 mil (Cc.) water, 2 glycerin; sparingly soluble in alcohol. Systemic Alkali, Diuretic, Diaphoretic; in fevers, bronchial affections, rheumatism, etc. **Average Dose:** 15 grains (1 Gm.).

⊕ **POTASSIUM CITRATE, GRANULAR EFFERVESCENT.**

Potassii Citras Effervescens. 20 percent. potassium citrate. **Average Dose:** 1 drachm (4 Gm.).

Potassium Dichromate Reagent. See Reagents (Part IV).

Potassium Ferricyanide Reagent. See Reagents (Part IV).

Potassium Ferrocyanide Reagent. See Reagents (Part IV).

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Potassium Glycerophosphate, 75 %, Squibbbottle, $\frac{1}{4}$ lb. ; oz.

Concentrated aqueous solution of $\text{C}_3\text{H}_7\text{O}_3\text{PO}(\text{OK})_2$. Yellowish, syrupy liquid. Soluble in water in all proportions. Used as Nerve Tonic. Dose: 4 to 10 grains (0.25 to 0.65 Gm.), usually in combination with other glycerophosphates.

⊕ **Potassium Hydroxide, Squibb**bottle, lb. ; $\frac{1}{4}$ lb.

Potassii Hydroxidum; Potassium Hydrate; Potassa; Caustic Potash. Assays not less than 85 percent. KOH. Small, crushed lumps; very acrid, caustic taste. 1 Gm. dissolves in 0.9 mil (Cc.) water, 3 mils alcohol, 2.5 glycerin. Caustic, Antacid. Dose: $\frac{1}{2}$ to 1 grain (0.03 to 0.65 Gm.), well diluted. Antidotes: water, then vinegar or lemon juice, emetics; demulcents. NOTE: On exposure potassium hydroxide readily absorbs carbon dioxide and moisture, and deliquesces. Hence keep well-stoppered, in dry place. (See also Reagents, Part IV; Solution.)

Potassium Hypophosphite, Squibbbottle, lb. ; $\frac{1}{4}$ lb.

Potassii Hypophosphis. KPH_2O_2 . White, opaque, odorless, deliquescent plates or masses, or granular powder; pungent, saline taste. 1 Gm. dissolves in 0.6 mil (Cc.) water, 9 mils alcohol; insoluble in ether. Used as Nerve Tonic. Average Dose: 8 grains (0.5 Gm.). Avoid trituration or heating with oxidizing agents, such as nitrates and chlorates, as explosion is liable to occur.

⊕ **Potassium Iodide, Squibb** * Granulated or Crystalsbottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Potassii Iodidum. KI. Faint, iodine-like odor; pungent, saline, afterwards bitter, taste. 1 Gm. dissolves in 0.7 mil (Cc.) water. 22 mils alcohol, 2 glycerin. Alterative, Resolvent, Antiluetic, Saline Expectorant. Average Dose: 5 grains (0.3 Gm.). Incompatible with alkaloidal salts, chloral hydrate, mineral acids, etc. (See also Tablets [Part II]; Reagents [Part IV].)

⊕ **Potassium Nitrate, Squibb**

* Granulated or Powdered

tin, lb.

Potassii Nitras; Saltpetre; Nitre. KNO_3 . Colorless, odorless granules; or white powder; cooling, saline, pungent taste. 1 Gm. dissolves in 2.8 mils (Cc.) water, 620 alcohol; soluble in glycerin. Diaphoretic, Diuretic; in fevers, asthma, dropsy, rheumatism, etc. Average Dose: 8 grains (0.5 Gm.). Antidotes: stimulants; ice water; opium. (See also Reagents [Part IV].)

⊕ **Potassium Permanganate, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Potassii Permanganas; Potassium Hypermanganate. KMnO_4 . An exceptionally pure salt; all large crystals, unlike regular so-called "large-crystal" grade. Slender, dark-purple, odorless prisms; sweet, afterwards disagreeable, astringent taste. 1 Gm. dissolves in 13.5 mils (Cc.) water; decomposed by other solvents. Deodorant, Disinfectant, Emmenagogue. Used mainly externally, in gonorrhea, leucorrhea, ulcers, tonsillitis, etc.; internally in amenorrhea, zymotic diseases, morphine poisoning, etc. **Average Dose:** 1 grain (0.065 Gm.), in tablets, or in pills made with kaolin and petrolatum or with cacao butter. Its stains can be removed with oxalic or hydrochloric acid. Either in dry condition or in concentrated solution it should not be brought into contact with organic or readily oxidizable substances; organic solvents should be avoided. (See also Tablets [Part II]; Reagents [Part IV].)

Potassium Persulphate Reagent. See Reagents (Part IV).

Potassium Phenolsulphonate, Squibb bottle, oz.

Potassium Sulphocarbolate Powdered. An exceptionally pure article, free from sulphates, chlorides, and metallic impurities. Freely soluble in water. Used as Intestinal Antiseptic. **Dose:** 3 to 10 grains (0.2 to 0.65 Gm.).

Potassium Sulphate, Squibb

* Crystals

carton, lb.

Powdered

carton, lb.

Potassii Sulphas, N. F. K_2SO_4 . White, odorless crystals or powder; bitter, saline taste. 1 Gm. dissolves in 10 mils (Cc.) water; insoluble in alcohol. Saline Cathartic, like sodium sulphate. **Average Dose:** acc. to N. F., 15 grains (1 Gm.); as cathartic, up to 240 grains (15 Gm.). (See also Reagents [Part IV].)

Potassium Sulphide, so-called. See Potassa Sulphurated.

Potassium Sulphocyanate Reagent. See Reagents (Part IV).

Potassium Sulphocarbolate. See Potassium Phenolsulphonate.

Potassium Tartrate, Squibb bottle, lb. ; ¼ lb.

Soluble Tartar. $2\text{K}_2\text{C}_4\text{H}_4\text{O}_6 \cdot \text{H}_2\text{O}$. Colorless, odorless crystals. Soluble freely in water; almost insoluble in alcohol. Refrigerant, Diuretic, Laxative. **Dose:** diuretic and refrigerant, 15 to 30 grains (1 to 2 Gm.); laxative, 60 to 180 grains (4 to 12 Gm.).

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

⊕ Potassium and Sodium Tartrate, Squibb

(Powdered) tin, lb. ; ½ lb. ; ¼ lb.

Potassii et Sodii Tartras; Rochelle or Seignette Salt; Tartrated Soda. $\text{KNaC}_4\text{H}_4\text{O}_6 \cdot 4\text{H}_2\text{O}$. A recrystallized grade, free from calcium salts, more pleasant to the taste than ordinary product. 1 Gm. dissolves in 0.9 mil (Cc.) water; almost insoluble in alcohol. Saline Cathartic. Average Dose: 150 grains (10 Gm.). (See also Reagents [Part IV].)

POULTICE, EMOLLIENT.

Species Emollientes, N. F. Equal parts althæa leaves, mallow leaves, melilot, matricaria and linseed, powdered. Mixed with hot water for use.

POULTICE SPICE. See Powder, Rubefacient Spice.

Powder Acetanilid Compound, Squibb

tin, lb. ; ¼ lb.

Pulvis Acetanilidi Compositus, N. F. Acetanilid 70 percent., caffeine 10, sodium bicarbonate 20. Analgesic, Antipyretic. Average Dose: 5 grains (0.3 Gm.).

POWDER ALOES AND CANELLA.

Pulvis Aloes et Canellæ, N. F.; Hiera Picra. Contains aloes 80 percent., canella 20. Laxative. Average Dose: 5 grains (0.3 Gm.).

Powder Alum Compound, Squibb

per doz. tins,

Surgical Powder. Introduced by Dr. E. R. Squibb in 1868, it has steadily grown in favor among the medical profession as an emergency dressing and wash. Efficacious and safe for external use. The ingredients are burnt alum, camphor and carbolic acid. Considered especially valuable as an Astringent, Absorbent and Antiseptic dry dressing for wounds. The effect is sometimes a stinging sensation, but regularly followed by a rapid and continuous healing. It should be used freely, keeping the surfaces well covered with the powder as long as there is any discharge. Very useful also as a Styptic in bleeding cuts and wounds (dry powder); and as an Antiphlogistic in inflamed throat and other catarrhs of the mucous passages (strong warm solution). As the efficacy of this powder depends upon its perfect freedom from moisture, it is offered only in original, special tins, which should be kept well closed and in dry place when not in use.

POWDER, ANTIMONIAL.

Pulvis Antimonialis, N. F.; James' Powder. 33 percent. antimony oxide, 67 percent. precipitated calcium phosphate. Diaphoretic, Alterative. Average Dose: 3 grains (0.2 Gm.).

Powder, Antiseptic (Soluble), Squibb

bottle, lb. ; ¼ lb.

Pulvis Antisepticus, N. F.; Soluble Antiseptic Powder. Powdered salicylic acid 0.5 percent., carbolic acid 0.1, eucalyptol 0.1, menthol 0.1, thymol 0.1, zinc sulphate 12.5, boric acid 86.6. Antiseptic; as dusting powder or in solution (5 percent.).

Powder, Aromatic, Squibb

tin, lb. ; ¼ lb.

Pulvis Aromaticus. 35 percent. each Saigon cinnamon and Jamaica ginger, 15 percent. each cardamom and nutmeg. Carminative, Stomachic. Average Dose: 15 grains (1 Gm.).

POWDER BAYBERRY COMPOUND.

Pulvis Myricæ Compositus, N. F.; Composition Powder. 60 percent. bayberry root-bark, 30 percent. ginger, 5 percent. each capsicum and cloves. Carminative. Average Dose: 15 grains (1 Gm.).

POWDER CALOMEL AND JALAP.

Pulvis Hydrargyri Chloridi Mitis et Jalapæ, N. F. Calomel 34 percent., jalap 66. Drastic Cathartic. Average Dose: 10 grains (0.65 Gm.).

POWDER CHALK AROMATIC.

Pulvis Cretæ Aromaticus, N. F. Cinnamon 8 percent., nutmeg 6, cloves 3, cardamom 2, prepared chalk 25, and sugar 56. Antacid Carminative, Antidiarrheal. Average Dose: 30 grains (2 Gm.).

† POWDER CHALK AROMATIC, WITH OPIUM.

Pulvis Cretæ Aromaticus cum Opio, N. F. Powdered opium 2.5 percent., aromatic chalk powder 97.5. Antidiarrheal. Average Dose: 15 grains (1 Gm.).

Powder Chalk Compound, Squibb

tin, lb. ; ¼ lb.

Pulvis Cretæ Compositus. Prepared chalk 30 percent., acacia 20, sugar 50. Antacid, in diarrhea. Average Dose: 30 grains (2 Gm.).

POWDER, COMPOSITION. See Powder Bayberry Compound.

Powder, Dover's. See Powder Ipecac and Opium.

Powder, Dover's, Liquid. See Tincture Ipecac and Opium.

Powder, Effervescing Compound. See Powder Seidlitz.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

POWDER, FOOT. See Powder Talcum Compound.

POWDER GAMBIR COMPOUND.

Pulvis Gambir Compositus, N. F. Gambir 40 percent., kino 20, krameria 20, cinnamon 10, nutmeg 10. Antidiarrheal. Average Dose: 20 grains (1.3 Gm.).

Powder Glycyrrhiza Compound, Squibb.

tin, lb. ; ¼ lb.

Pulvis Glycyrrhizæ Compositus, U. S. P. 1880; Compound Licorice Powder. Consists of licorice root 16 percent., senna 18, washed sulphur 8, ground fennel 8 and sugar 50. Considered therapeutically superior to present U. S. P. article, and also more stable and uniform. Laxative. Average Dose: 60 grains (4 Gm.).

Powder, Gray. See Mercury with Chalk.

POWDER, GREGORY'S. See Powder, Rhubarb Compound.

† Powder Ipecac and Opium, Squibb

tin, lb. ; ¼ lb. ; oz.

Pulvis Ipecacuanhæ et Opii; Dover's Powder; Compound Ipecac Powder. Contains ipecac and powdered opium (each 10 percent.), but the potassium sulphate (in U. S. P. 1870 formula) is retained in place of the milk sugar now prescribed. Considered a superior preparation. Squibb's Dover's Powder has long been the standard, and is a product made by the exercise of greatest thoroughness and manipulative skill. Anodyne, Antispasmodic, Diaphoretic. Average Dose: 8 grains (0.5 Gm.). Antidotes: potassium permanganate solution, emetic hypodermically; atropine or strychnine; hot, strong coffee; exercise.

Powder Ipecac Compound. See Powder Ipecac and Opium.

Powder Jalap Compound, Squibb tin, lb. ; ¼ lb.

Pulvis Jalapæ Compositus. Jalap 35 percent., potassium bitartrate 65. Hydragogue Cathartic; in dropsy of hepatic causation, obstinate constipation, etc. Average Dose: 30 grains (2 Gm.).

† POWDER KINO AND OPIUM COMPOUND.

Pulvis Kino et Opii Compositus, N. F.; Powder Kino Compound, N. F. III. Kino 75%, powdered opium 5%, Saigon cinnamon 20%. Intestinal Astringent. Average Dose: 15 grains (1 Gm.).

Powder Licorice Compound, Squibb.

See Powder Glycyrrhiza Compound.

Powder Opium and Ipecac. See Powder Ipecac and Opium.

Powder Pancreatin Compound, Squibbbottle, $\frac{1}{4}$ lb. ; oz.

Pulvis Pancreatini Compositus, N. F.; Peptonizing Powder. Pancreatin 20 percent., sodium bicarbonate 80. 25 grains sufficient to peptonize 1 pint fresh cow's milk.

Powder, Peptonizing. See Powder Pancreatin Compound.

POWDER RHUBARB COMPOUND.

Pulvis Rhei Compositus; Rhubarb and Magnesia; Gregory's Powder. Rhubarb 25 percent., Jamaica ginger 10, magnesium oxide 65. Antacid, Carminative, Laxative; chiefly in children. **Average Dose:** 30 grains (2 Gm.).

POWDER RHUBARB AND MAGNESIA, ANISATED.

Pulvis Rhei et Magnesiae Anisatus, N. F.; Compound Anise Powder. Rhubarb 35 percent., heavy magnesia 65, with anethol as corrective. Carminative, Antacid, Laxative; largely in infants. **Average Dose** (infants): 5 grains (0.3 Gm.).

POWDER, RUBEFACIENT SPICE.

Pulvis Aromaticus Rubefaciens, N. F. Replacing Aromatic Plaster, N. F. III. 30% clove, 30% cinnamon, 20% ginger, 20% capsicum. Rubefacient poultice material.

Powder, Seidlitz, Squibb bottle, lb. ; $\frac{1}{4}$ lb.

This effervescent saline mixture is Seidlitz Powder mixed together into a single powder, the constituents being all separately well dried before being mixed. It consists of potassium and sodium tartrate (Rochelle salt), sodium bicarbonate, tartaric acid, and sodium chloride, the latter being added to enhance its medicinal activity and palatability. As an Aperient the dose is one to three teaspoonfuls (5 to 15 Gm.) with or without sugar, stirred into three-fourths of a large glassful of cold water, and drunk at once while the powder is suspended in the water. For use as an alkaline mineral water, or as a substitute for Rochelle salt, about $\frac{1}{2}$ teaspoonful, stirred into the same quantity of water as above, and taken two or three times a day, may be sufficient. In the use of this powder the effervescence is *intentionally slight*, or, if the water be very cold (as it should be), is hardly perceptible, as the liberation of the carbonic acid is intended to take place slowly internally where it may be of service. Dampness should be carefully excluded.

Powder, Soluble Antiseptic. See Powder, Antiseptic.

Powder, Surgical. See Powder Alum Compound.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. When prescribing, please specify SQUIBB'S.

Powder Talcum. See Talcum Powder.

POWDER TALCUM COMPOUND.

Pulvis Talci Compositus, N. F.; Powder Talc Salicylated, N. F. III. Salicylic acid 3%, boric acid 10%, talcum 87%. Antiseptic, Deodorant, Antihydrotic dusting powder.

Powder, Veterinary, Squibb tin, per doz.

Used by the veterinary profession for many years, as an efficacious, safe Antiseptic, Astringent and Absorbent dressing for wounds. The therapeutically active ingredients are burnt alum, camphor, carbolic acid and charcoal. It should be used in sufficient quantity to keep the wound surface dry. Serviceable also as a Styptic on incised and other bleeding wounds, applied freely in dry powder. Sold only in original tins, which should be kept well closed and in dry place when not in use.

Precipitate, Red. See Mercury Oxide Red.

Precipitate; White. See Mercury Ammoniated.

Precipitate, Yellow. See Mercury Oxide Yellow.

PRICKLY ASH BARK. See Xanthoxylum.

PRICKLY ASH BERRIES.

Xanthoxyli Fructus, N. F. Dried fruit of *Xanthoxylum americanum* or of *X. Clava-Herculis* (Fam. Rutaceæ). Faint odor; warm, aromatic taste. Used as Sialagogue, Carminative, Alterative. **Average Dose:** 15 grains (1 Gm.).

PRINCE'S PINE. See Chimaphila.

⊕ **PROCAINE.**

Name adopted by Federal Trade Commission for novocain as made in America. Para-aminobenzo methylaminoethanol Hydrochloride. Colorless needles. Soluble in 1 part water, 30 alcohol. Local Anesthetic, like cocaine; solutions are sterilizable.

PROTAN.

Compound of casein and tannic acid (50 percent.). Light-brown, tasteless, water-insoluble powder. Intestinal Astringent. **Dose:** 15 to 30 grains (1 to 2 Gm.).

Protargentum, Squibb 1 oz. vial

Compound of silver and protein, containing about 8 percent. Ag. Chocolate-brown, odorless powder; taste bitter and metallic. Soluble rather slowly but freely in water; insoluble in alcohol or oils. Solutions not precipitated by usual silver reagents, nor affected by cocaine hydrochloride in weak solutions. Used in urethritis and inflammation of eyes and nose, in 1/4 to 5 percent. solutions, which should preferably be made fresh as wanted. (See also Solargentum, containing 20 percent. Ag.)

PROTARGOL.

Silver-proteid. Light-brown, bulky powder; 8.3 percent. silver. Soluble freely in water or glycerin; not precipitated by alkalis, albumen or chlorides. Bactericide, Antigonorrhœic, Antipyric. Incompatible in solution with lead acetate, zinc sulphate, copper sulphate, alum, or mercuric chloride. Its solutions should be made with cold water. Applied externally in acute cases in $\frac{1}{4}$ to 1 percent. solutions; in chronic cases, in 5 to 10 percent. strengths. **Dose:** 1 to 3 grains (0.065 to 0.2 Gm.). (See also Protargentum.)

PRUNE.

Prunum, N. F. Partly dried, ripe fruit of *Prunus domestica* (Fam. *Rosaceæ*). Laxative Nutritive.

Prussian Blue, Insoluble. See Iron Ferrocyanide.

PULSATILLA.

Pulsatilla, N. F. Dried herb of *Anemone Pulsatilla*, *A. pratensis* or of *A. Ludoviciana* (Fam. *Ranunculaceæ*). Nearly odorless; very acrid taste. Used as Alterative, Sedative, Antispasmodic. **Average Dose:** 5 grains (0.3 Gm.).

PUMICE.

Pumex, N. F. Combination of complex silicates of aluminum, potassium and sodium, of volcanic origin. Abrasive, Polishing material; also used chemically.

PUMPKIN SEED.

Pepo. Dried ripe seeds of cultivated varieties of *Cucurbita Pepo* (Fam. *Cucurbitaceæ*). Domestic Anthelmintic. **Average Dose:** 1 ounce (30 Gm.).

PUNICINE TANNATE. See Pelletierine Tannate.

PYRAMIDON.

Dimethylaminoantipyrine. Small, white, nearly tasteless crystals. Soluble in about 11 parts water; readily in alcohol or ether. Incompatible with ferric chloride and spirit nitrous ether. Antipyretic, Analgesic. **Dose:** 5 to 8 grains (0.3 to 0.75 Gm.).

PYRETHRUM.

Pyrethrum; Pellitory Root. Dried root of *Anacyclus Pyrethrum* (Fam. *Compositæ*). Sialagogue, Stimulant Masticatory, Local Irritant. **Average Dose:** 30 grains (2 Gm.).

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Pyrogallol, Squibb

(Acid Pyrogallic) tin, lb. ; ¼ lb. ; oz.

Pyrogallol; Trihydroxybenzene. $C_6H_3(OH_3)$. Light, white, odorless, bitter laminæ or needles. 1 Gm. dissolves in 1.7 mils (Cc.) water, 1.3 mils alcohol, 1.6 ether. Incompatible in trituration with antipyrine, camphor, carbolic acid, iodine, lead acetate or menthol. Antiparasitic Dermic, in 5 to 10 percent. ointment; also Reagent, and photographic developer.

PYROXYLIN.

Pyroxylinum; Soluble Gun Cotton; Collodion Cotton; Colloxylin. Obtained by action of mixture of nitric and sulphuric acids on cotton. Consists chiefly of cellulose tetranitrate. Used for making collodion. Very inflammable!

QUASSIA.

Quassia; Bitter Wood. Wood of *Picrasma excelsa* or of *Quassia amara* (Fam. *Simarubaceæ*), Jamaica and Surinam quassias. Bitter Tonic; infusion is used as enema as Vermicide. Average Dose: 8 grains (0.5 Gm.).

QUEBRACHO. See *Aspidosperma*.

QUEEN'S ROOT. See *Stillingia*.

QUERCUS.

Quercus, N. F. Dried bark of trunk and branches of *Quercus alba* (Fam. *Fagaciæ*), deprived of periderm. Distinct odor; strongly astringent taste. Tannin-bearing Astringent. Average Dose: 15 grains (1 Gm.).

Quevenne's Iron. See Iron Reduced.

Quicklime. See Lime.

Quicksilver. See Mercury.

QUILLAJA.

Quillaja, N. F.; Soap Bark. Dried bark of *Quillaja Saponaria* (Fam. *Rosaceæ*), deprived of periderm. Slight odor; acrid taste. The powdered root is strongly sternutatory. Expectorant, Antiparasitic Dermic.

QUINIDINE.

Quinidina, N. F. $C_{20}H_{24}O_2N_2$. Alkaloid of cinchona, isomeric with quinine. White, odorless, very bitter crystals or powder. 1 Gm. dissolves in about 32 mils (Cc.) alcohol, 53 ether, 1.5 chloroform; almost insoluble in water. Action, Dose, etc., as of quinine alkaloid. At one time recommended as cheap substitute for quinine; inferior to it.

⊕ **Quinine Alkaloid, Squibb** bottle, oz.

Quinina. $C_{20}H_{24}O_2N_2 \cdot 3H_2O$. White, odorless, bitter, slightly efflorescent powder. 1 Gm. dissolves in 1560 mils (Cc.) water, 0.8 alcohol, 1.1 chloroform, 1.9 ether, 150 glycerin. Antiperiodic, Bitter Tonic, Ecboic, Antiseptic, Antipyretic. **Average Dose:** Tonic $1\frac{1}{2}$ grains (0.1 Gm.); Antiperiodic, at least 15 grains (1 Gm.) daily. Contraindicated in ear diseases. Used externally on wounds.

Quinine Bisulphate, Squibb bottle, oz.

Quinina Bisulphas; Acid Quinine Sulphate. $C_{20}H_{24}O_2N_2 \cdot H_2SO_4 \cdot 7H_2O$. Colorless, transparent or whitish crystals or small needles; odorless; very bitter. Efflorescent, and turns yellow on exposure to light. 1 Gm. dissolves in 9 mils (Cc.) water, 23 alcohol, 15 glycerin, 625 chloroform, 2500 ether. Action and dose: as of quinine alkaloid. Used largely subcutaneously; also in coryza (0.2 percent. solution). (See also Tablets [Part II].)

Quinine Dihydrochloride, Squibb bottle, oz.

Quinina Dihydrochloridum. $C_{20}H_{24}O_2N_2 \cdot 2HCl$. White, odorless, very bitter powder. 1 Gm. dissolves in 0.6 mil (Cc.) water, 12 alcohol; slightly soluble in chloroform or ether. Darkened by light. Preferred for hypodermic use; used also in whooping-cough. **Dose:** as of quinine alkaloid. (See also Ampuls.)

QUININE ETHYLCARBONATE. See Euquinine.

Quinine Glycerophosphate, Squibb bottle, oz.

Quinina Glycerophosphas, N. F. White, odorless, bitter powder; 68 percent. quinine. 1 Gm. dissolves in about 850 mils (Cc.) water, 75 alcohol; slightly soluble in chloroform or ether. Used as Nerve Tonic, Antiperiodic; chiefly in malaria with nervous debility. **Average Dose:** tonic, $1\frac{1}{2}$ grains (0.1 Gm.); antiperiodic, 15 grains (1 Gm.).

Quinine Hydrobromide, Squibb bottle, oz.

Quinina Hydrobromidum; Quinine Bromide. $C_{20}H_{24}O_2N_2 \cdot HBr \cdot H_2O$. White, light, silky, odorless; very bitter, efflorescent. 1 Gm. dissolves in 40 mils (Cc.) water, 0.9 alcohol, 7 glycerin, 0.6 chloroform, 23 ether. Action and dose: as of quinine alkaloid.

⊕ **Quinine Hydrochloride, Squibb** bottle, oz.

Quinina Hydrochloridum; Quinine Hydrochlorate. $C_{20}H_{24}O_2N_2 \cdot HCl \cdot 2H_2O$. White, silky, odorless, very bitter needles. 1 Gm. dissolves in 18 mils (Cc.) water, 0.8 alcohol, 7 glycerin, 0.7 chloroform, 340 ether. Action and dose: as of quinine alkaloid. (See also Tablets [Part II].)

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Quinine Hypophosphite, Squibb bottle, oz.

Quininae Hypophosphis, N. F. $C_{20}H_{24}O_2N_2 \cdot H_3PO_2 \cdot 2H_2O$. Small, white, odorless, bitter crystals. 1 Gm. dissolves in about 35 mils (Cc.) water, 12.5 alcohol, 27 chloroform; almost insoluble in ether. Action and dose: like quinine alkaloid.

Quinine Oleate. See Oleate Quinine.

Quinine Salicylate, Squibb

Quininae Salicylas. $C_{20}H_{24}O_2N_2 \cdot C_7H_6O_3 \cdot H_2O$. Colorless, odorless needles, becoming pinkish on keeping. 1 Gm. dissolves in 14 mils (Cc.) alcohol, 13 glycerin, 25 chloroform, 160 ether; slightly soluble in water. Bitter Tonic, Antineuralgic, Antiperiodic; in rheumatism, lumbago, typhoid fever, etc. **Average Dose:** tonic, $1\frac{1}{2}$ grains (0.1 Gm.); antiperiodic, at least 15 grains (1 Gm.) daily.

⊕ **Quinine Sulphate, Squibb**

tin, 5 ozs., per oz. ; bottle, oz.

Quininae Sulphas. $(C_{20}H_{24}O_2N_2)_2 \cdot H_2SO_4 \cdot 7H_2O$. White silky, flexible, glistening, odorless, extremely bitter needles. 1 Gm. dissolves in 725 mils (Cc.) water, 107 alcohol, 30 glycerin; sparingly soluble in chloroform or ether. Dilute acids increase aqueous solubility. Action and dose: as of quinine alkaloid. Best given with or followed by an acid. (See also Tablets [Part II].)

⊕ **Quinine Tannate, Squibb** bottle, oz.

Quininae Tannas. $C_{20}H_{24}O_2N_2 \cdot 3C_{14}H_{10}O_9 \cdot 8H_2O$. Yellowish-white, odorless, nearly tasteless powder; 30 to 35 percent. anhydrous quinine. Slightly soluble in water, chloroform or ether; more soluble in alcohol. Used mainly in children, because of relative tastelessness. **Average Dose:** 3 grains (0.2 Gm.), in milk.

Quinine Valerate, Squibb bottle, oz.

Quininae Valeras, N. F. $C_{20}H_{24}O_2N_2 \cdot C_5H_{10}O_2 \cdot H_2O$. White, shining crystals; valerian odor; bitter taste. Sparingly soluble in water, becoming less soluble with age; readily soluble in alcohol. Nervine, Antiperiodic; in hemiplegia, hysteria and other neuroses associated with malaria. **Average Dose:** nervine, $1\frac{1}{2}$ grains (0.1 Gm.); antiperiodic, at least 15 grains (1 Gm.) daily.

Quinine and Iron Citrate. See Iron and Quinine Citrate.

⊕ **Quinine and Urea Hydrochloride, Squibb** bottle, oz.

10-grain hermetically sealed tubes, box of 10,

Quininae et Ureae Hydrochloridum; Carbamidated Quinine Dihydrochloride. $C_{20}H_{24}O_2N_2 \cdot HCl \cdot CO \cdot (NH_2)_2 \cdot HCl \cdot 5H_2O$. Colorless, odorless, bitter crystals; about 58 percent. anhydrous quinine. 1 Gm. dissolves in 0.9 mil (Cc.) water, 2.4 mils alcohol. Subcutaneous Antiperiodic; Local Anesthetic with hemostatic action, in $\frac{1}{2}$ to 1 percent solutions by injection and 10 to 20 percent. solutions topically. **Average Dose:** 15 grains (1 Gm.). (See also Ampuls.)

RASPBERRIES.

Rubi Idæi Fructus, N. F. Fresh, ripe fruit of varieties of *Rubus Idæus* or of *R. strigosus* (Fam. *Rosaceæ*).

Reagents, Test Solutions, Volumetric Solutions and Indicators. See Part IV.

Red Bark. See Cinchona, Red.

RED CLOVER. See Trifolium.

RED SAUNDERS. See Sandal Wood, Red.

Rennin, Squibb bottle, oz.

Renninum, N. F. Milk-curdling enzyme from stomach of calf; 1 part added to 25,000 parts fresh cow's milk heated to 105° F. produces a fine curd in ten minutes. Used for making liquid rennet, junket, essence pepsin, and similar preparations.

Resin Guaiac. See Guaiac Resin.

Resin Jalap, Squibb bottle, oz.

Resina Jalapæ. Yellowish-gray to yellowish-brown powder; slight, peculiar odor; acrid taste. Soluble in alcohol in all proportions; in about 5 parts ammonia water. Drastic Hydragogue, Cathartic. **Average Dose:** 2 grains (0.13 Gm.).

⊕ **Resin Podophyllum, Squibb** bottle, oz.

Resina Podophylli; Podophyllin. An acid-precipitated, well-washed resin. Light-brown to greenish-yellow, faintly bitter powder; very irritating to the nose and eyes. Soluble in alcohol. Slow but effective and rather irritant Cathartic. Acts in 10 to 12 hours. **Average Dose:** 1/6 grain (0.01 Gm.).

Resin Scammony, Squibb

(Powdered)

bottle, oz.

Resina Scammonia. Prepared from best quality Turkish true scammony root, the dried root of *Convolvulus Scammonia*; not from the cheaper, so-called "Mexican scammony root." Yellowish powder; faint odor and taste. Freely and completely soluble in alcohol; 95 percent. soluble in ether. Drastic Purgative. **Average Dose:** 3 grains (0.2 Gm.).

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

⊕ **Resorcinol, Squibb**

*Crystals

bottle, oz.

Powdered

bottle, oz.

Resorcinol; Resorcin; Metadihydroxybenzene. $C_6H_4(OH)_2$. Nearly white needles or powder; faint odor; sweetish taste, bitter after-taste. 1 Gm. dissolves in 0.9 mil (Cc.) water or alcohol; easily soluble in ether or glycerin, very slightly in chloroform. Antiseptic externally; Antizymotic internally. Employed internally in sea-sickness, diarrhea, whooping-cough, cystitis, etc.; externally (in 5 to 30 percent. solutions or ointments) in skin diseases, gonorrhea, etc. Also Reagent. **Average Dose:** 2 grains (0.13 Gm.). Incompatible on trituration with acetanilid, antipyrine, camphor, euphorin, menthol, or urethane; with alkalis or spirit nitrous ether in solution. Turns pink on keeping and exposure.

RHAMNUS FRANGULA. See *Frangula*.

Rhamnus Purshiana. See *Cascara Sagrada*.

Rhatany. See *Krameria*.

Rhodalline. See *Thiosinamine*.

Rhubarb, Squibb

*Whole Select

tin, lb. ; ¼ lb.

Fingers (Pressed)

80 to 1 lb., per lb.

Ground for Percolation

tin, lb.

Powdered (100)

tin, lb. ; ¼ lb.

Rheum. Dried rhizomes and roots of *Rheum officinale*, *R. palmatum*, and other species of *Rheum* (Fam. *Polygonaceæ*). Prime quality of Chinese root, selected with great care, all imperfect and bad pieces being rejected. Good sun-dried rhubarb is measurably injured by being sawed up into regular forms, and therefore no "cut rhubarb" is offered in this list. Characteristic odor; bitter, astringent taste. Bitter Stomachic, pleasant Laxative. **Average Dose:** 15 grains (1 Gm.). Acts in 7 to 8 hours. (See also Extract; Fluidextract; Mixture; Powder; Syrup; Tincture; Tablets [Part II].).

RHUS GLABRA.

Rhus Glabra, N. F. Dried, ripe fruit of *Rhus glabra* (Fam. *Anacardiaceæ*). Astringent, like *krameria*; in diarrhea, etc. **Average Dose:** 15 grains (1 Gm.).

Rochelle Salt. See Potassium and Sodium Tartrate.

⊕ **ROSE (RED).**

Rosa Gallica. Dried petals of *Rosa gallica* (Fam. *Rosaceæ*). Used pharmaceutically.

ROSIN.

Resina; Colophony. Residue left after distilling off volatile oil from gum turpentine. Freely soluble in alcohol, ether, benzene, oils. Used pharmaceutically.

RUBUS.

Rubus, N. F.; Blackberry Bark. Dried bark of rhizome of *Rubus villosus*, *R. nigrobaccus* or of *R. cuneifolius* (Fam. *Rosaceæ*). Tannin-bearing Astringent; in diarrhea. Average Dose: 15 grains (1 Gm.).

RUFUS'S PILLS. See Pills Aloes and Myrrh.

RUMEX.

Rumex, N. F. Roots of *Rumex crispus* or of *R. obtusifolius* (Fam. *Polygonaceæ*). Alterative. Average Dose: 60 grains (4 Gm.). (See also Fluidextract).

SABAL.

Sabal; Saw Palmetto Berries. Partially dried ripe fruit of *Serenoa serrulata* (Fam. *Palmæ*). Used as Stimulant of genito-urinary mucosa, like oil sandalwood. Average Dose: 15 grains (1 Gm.). (See also Fluidextract.)

SABROMIN.

Calcium Dibrombehenate. White, odorless, tasteless powder, containing 29 percent. bromine. Soluble in ether; insoluble in water, alcohol. Succedaneum for alkali bromides, in same doses.

SACCHARIN. See Benzosulphinide.

Saccharin Soluble. See Sodium Benzosulphinide.

SACCHARINOSE, SACCHAROL. Brands of Saccharin.

SAFFRON. See Crocus.

SAJODIN.

Calcium Monoiodobehenate. $(C_{21}H_{42}ICOO)_2Ca$. White, odorless, tasteless powder; 26 percent. iodine, 4.1 percent. calcium. Succedaneum for alkali iodides internally. Dose: 5 to 15 grains (0.3 to 1 Gm.).

Sal Acetosella. See Potassium Binoxalate.

Sal Alembroth. See Mercury Ammoniated.

Sal Ammoniac. See Ammonium Chloride.

Sal Tartar. See Potassium Carbonate.

Salicin, Squibb bottle, oz.

Salicinum. $C_{13}H_{18}O_7$. Glucoside obtained from several species of *Salix* and *Populus* (Fam. *Salicaceæ*). Colorless, silky, shining needles or prisms, or white powder; odorless, very bitter. 1 Gm. dissolves in 23.5 mls (Cc.) water, 88.5 alcohol; insoluble in ether or chloroform. Antirheumatic, Antiperiodic, Bitter Tonic. Average Dose: 15 grains (1 Gm.).

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

SALICYLQUININE. See Saloquinine.

SALIPYRINE.

Antipyrine Salicylate. White, odorless powder; sweetish taste, bitter after-taste; about 58 percent. antipyrine, 32 percent. salicylic acid. Soluble in 200 parts water; readily in alcohol. Decomposed by acids and alkalis. Analgesic, Antipyretic. **Dose:** 8 to 30 grains (0.75 to 2 Gm.).

Salol. See Phenyl Salicylate.

SALOPHEN.

Acetamidosalol. White, odorless, tasteless powder; 51 percent. salicylic acid. Soluble in alcohol, ether, chloroform; insoluble in water. Decomposed by alkalis. Antirheumatic, Antipyretic, Antiseptic. **Dose:** 5 to 15 grains (0.3 to 1 Gm.). Externally in 10 percent. ointment.

SALOQUININE.

Salicylquinine; Quinine Salicylic Ester. Whitish, tasteless, odorless powder. Soluble readily in chloroform, sparingly in ether or alcohol; insoluble in water. Antiperiodic, Antineuralgic, Antipyretic. **Dose:** 5 to 20 grains (0.3 to 1.3 Gm.).

Salt, Bitter. See Magnesium Sulphate.

Salt, Carlsbad Artificial, Powder, Squibb

bottle, lb. ; $\frac{1}{4}$ lb.

Sal Carolinum Factitium, N. F.; dried form. 2 percent. potassium sulphate, 18 sodium chloride, 36 sodium bicarbonate, 44 dried sodium sulphate. 16 grains dissolved in 7 fluidounces water represents same volume of Carlsbad Sprudel water. Saline Laxative.

Salt, Carlsbad Artificial, Granular Effervescent, Squibb

bottle, lb. ; 4 oz. bottles, per doz.

Sal Carolinum Factitium Effervescens, N. F. 26.6 percent. dried artificial Carlsbad salt. **Average Dose:** 90 grains (6 Gm.).

Salt, Epsom. See Magnesium Sulphate.

Salt, Glauber's. See Sodium Sulphate.

Salt, Kissingen, Artificial, Squibb

bottle, lb.

Sal Kissingense Factitium, N. F. About 3 percent. potassium chloride, 66 sodium chloride, 11 anhydrous magnesium sulphate and 20 sodium bicarbonate. Solution of 24 grains in 7 fluidounces water represents same volume of Kissingen water (Rakoczi spring). Alterative.

Salt, Kissingen, Artificial, Granular Effervescent, Squibb bottle, lb. ; 4-oz. bottles, per doz.

Sal Kissingense Factitium Effervescens, N. F. Contains about 40 percent. artificial Kissingen salt. Alternative. Solution of 80 grains in 6 fluidounces water represents equal volume of Kissingen water. Average Dose: 80 grains (5.5 Gm.).

Salt, Monsel's. See Iron Subsulphate.

Salt, Rochelle or Seignette. See Potassium and Sodium Tartrate.

Salt, Vichy, Artificial, Squibb bottle, lb.

Sal Vichyanum Factitium, N. F. Contains about 85 percent. sodium bicarbonate, 4 potassium carbonate, 4 anhydrous magnesium sulphate, and 7 sodium chloride. Solution of 16 grains in 7 fluidounces water represents equal volume of Vichy water (Grande Grille spring). Antacid.

Salt, Vichy, Artificial, Granular Effervescent, Squibb bottle, lb. ; 4-oz. bottles, per doz.

Sal Vichyanum Factitium Effervescens, N. F. Contains 25 percent. artificial Vichy salt. Solution of 60 grains in 7 fluidounces water represents same volume of Vichy water (Grande Grille spring). Average Dose: 60 grains (4 Gm.).

SALT, VICHY, ARTIFICIAL, GRANULAR EFFERVESCENT, WITH LITHIUM.

Sal Vichyanum Factitium Effervescens cum Lithio, N. F. Contains 25 percent. artificial Vichy salt and 8.3 percent. lithium citrate. Antacid. Average Dose: 90 grains (6 Gm.).

Salt, Volatile. See Ammonium Carbonate.

Saltpetre. See Potassium Nitrate.

SALVARSAN. Brand of Arsphenamine.

Salts, Granular Effervescent, Squibb

Skilfully made products, from purest ingredients, in accurate and proper proportions to secure the best results. They dissolve rapidly with brisk effervescence.

We make: *Salt Carlsbad, Artificial*; *Salt Kissingen, Artificial*; *Lithium Citrate*; *Magnesium Citrate*; *Magnesium Sulphate*; *Sodium Phosphate*; *Sodium Phosphate Compound*; *Sodium Sulphate*; *Salt Vichy, Artificial*. (See these titles.)

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

SAMBUCUS.

Sambucus, N. F.; Elder Flowers. Air-dried flowers of *Sambucus canadensis* or of *S. nigra* (Fam. *Caprifoliaceæ*). Faintly sweet, aromatic odor; slightly bitter taste. Used in dropsy; large doses are said to act as Hydragogue Cathartic. **Average Dose:** 60 grains (4 Gm.).

SANDAL WOOD.

Santalum Album, N. F.; White or Yellow Sandal Wood. Heartwood of *Santalum album* (Fam. *Santalaceæ*). Aromatic, persistent odor; strongly aromatic taste. Source of oil sandal wood.

SANDAL WOOD, RED.

Santalum Rubrum; Red Saunders. Heart-wood of *Pterocarpus santalinus* (Fam. *Leguminosæ*). Brownish-red chips or powder; nearly odorless and tasteless. Coloring for alcoholic liquids.

Sanguinaria, Squibb**Ground for Percolation**

tin, lb.

Sanguinaria; Blood Root; Tetterwort. Dried rhizome and roots of *Sanguinaria canadensis* (Fam. *Papaveraceæ*). Of slight odor; persistent, acrid bitter taste. Expectorant, Emetic, Errhine. **Average Dose:** Expectorant, 2 grains (0.13 Gm.); emetic, 15 grains (1 Gm.).

⊕ Santonin, Squibb***Crystals**

bottle, oz.

Powdered

bottle, oz.

Santoninum. Anhydride or Lactone of Santonic Acid, $C_{15}H_{18}O_3$. From *Santonica* (*Artemisia pauciflora*). Colorless, shining, flattened, odorless prisms, or white powder; nearly tasteless at first, then becoming bitter. Turns yellow on exposure to light. 1 Gm. dissolves in 43 mils (Cc.) alcohol, 1.7 chloroform, 110 ether; very slightly soluble in water; soluble in alkalis and most oils. Vermicide, especially against ascaris. **Average Dose:** 1 grain (0.065 Gm.). **Antidotes:** chloral hydrate by enema, cold affusions.

SANTYL.

Santalol Salicylate; Salicylic Ester of Santalol. Yellowish oil; faint balsamic odor and taste; sp. gr. 1.07. Soluble in about 10 parts alcohol; insoluble in water. Anticatarrhal, Antiseptic. **Dose:** 8 to 24 minims (0.5 to 1.5 mils [Cc.]), in capsules.

SARSAPARILLA.

Sarsaparilla; *Radix Sarsæ*; Sarsaparilla (Fam. *Liliaceæ*). Formerly used as Alterative in chronic rheumatism, skin diseases, syphilis, etc.; now employed mainly as taste corrigent. **Average Dose:** 30 grains (2 Gm.). (See also Fluidextract; Syrup.)

Sassafras, Squibb

tin, lb.

Sassafras. Dried bark of root of *Sassafras variifolium* (Fam. *Lauraceæ*), collected in early spring or autumn, and deprived of outer corky layer. Mild Aromatic and Carminative; but used chiefly as flavoring. **Average Dose:** $2\frac{1}{2}$ drachms (10 Gm.).

SASSAFRAS PITH.

Sassafras Medulla, N. F. Dried pith of *Sassafras variifolium* (Fam. *Lauraceæ*). Faint, sassafras-like odor; mucilaginous taste. Demulcent.

SAXIN. Brand of Benzosulphinide (Saccharin).**SCAMMONY ROOT.**

Scammonia Radix. Dried root of *Convolvulus Scammonia* (Fam. *Convolvulaceæ*), yielding not less than 8 percent. total resin. Hydragogue Cathartic. **Average Dose:** 4 grains (0.25 Gm.). (See also Resin.)

SCARLET R MEDICINAL:

Toluylazobetanaphthol. Dark brownish-red powder. Nearly insoluble in water; soluble in chloroform, oils, fats. Cicatrizant, Antipytic; in suppurating wounds, chronic ulcers, etc., in 4 to 8 percent. ointments.

SCOPARIUS.

Scoparius, N. F.; Broom Tops. Dried tops of *Cytisus scoparius* (Fam. *Leguminosæ*). Diuretic. **Average Dose:** 15 grains (1 Gm.).

⊕ Scopolamine Hydrobromide, Squibb

15-grain vial, ; 5-grain vial,

Scopolaminæ Hydrobromidum. $C_{17}H_{21}O_4N.HBr.3H_2O$. Officially considered identical with hyoscine hydrobromide. Colorless, odorless, slightly efflorescent crystals. 1 Gm. dissolves in 1.5 mils (Cc.) water, 20 alcohol; slightly soluble in chloroform; insoluble in ether. Hypnotic, Sedative, Mydriatic (in $\frac{1}{4}$ percent. solution; also used as preliminary to anæsthesia, and combined with morphine, to produce "twilight sleep." **Average Dose:** $\frac{1}{200}$ grain (0.0003 Gm.); in the insane larger doses are given. **Antidotes:** tannin, emetics; pilocarpine or morphine subcutaneously; chloral hydrate. (See also Tablets [Part II].)

SCOPOLAMINE, STABLE.

Scopomannit. Aqueous solution scopolamine hydrobromide protected against decomposition by addition of 10 percent. mannitol. 1 mil (Cc.) contains 0.0003 Gm. ($\frac{1}{200}$ grain) drug.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

SCULLCAP. See *Scutellaria*.

SCUTELLARIA.

Scutellaria, N. F.; Scullcap; Hoodwort. Dried plant of *Scutellaria lateriflora* (Fam. *Labiatae*). Bitter taste; contains several proximate principles. Used as Nerve Sedative, Antispasmodic; in chorea, convulsions, neuralgia, etc. **Average Dose:** 15 grains (1 Gm.).

Seidlitz Powder. See Powder, Seidlitz.

SENECIO.

Senecio Aureus, N. F.; Life Root. Dried, overground portions of *Senecio aureus* (Fam. *Compositae*). Aromatic odor; bitter, slightly astringent, acrid, pungent taste. Used as Tonic, Expectorant, Diaphoretic, Diuretic. **Average Dose:** 60 grains (4 Gm.).

SENECIO.

Senecio, N. F.; Life Root. Dried overground portions of *Senecio aureus* (Fam. *Compositae*). Used as Tonic, Diuretic, Expectorant, Diaphoretic. **Average Dose:** 60 grains (4 Gm.).

SENEGA.

Senega; Senega Snakeroot. Dried root of *Polygala Senega* (Fam. *Polygalaceae*); of correct identity and purity. Odor slight, nauseating; taste sweetish, afterwards acrid. Nauseant Expectorant. **Average Dose:** 15 grains (1 Gm.). (See also Fluidextract; Syrup.)

⊕ Senna, Squibb	*Whole	tin, lb.
	Ground for Percolation	tin, lb.
	Powdered	tin, lb.

Senna. Alexandria and India senna, respectively the dried leaflets of *Cassia acutifolia* and *C. angustifolia* (Fam. *Leguminosae*). Cathartic. **Average Dose:** 60 grains (4 Gm.). Acts in 4 to 5 hours. (See also Confection; Fluidextract; Syrup.)

SERPENTARIA.

Serpentaria; Virginia Snakeroot. Dried rhizome and roots of *Aristolochia Serpentaria* and *A. reticulata* (Fam. *Aristolochiaceae*). Bitter, similar to gentian. **Average Dose:** 15 grains (1 Gm.).

Serum Antidiphtheritic and Serum Antitetanic.

See Part III, Biological Products.

SILICA.

Terra Silicea Purificata; Purified Kieselguhr; Purified Infusorial Earth. SiO_2 consisting of frustules and fragments of diatoms purified by boiling with hydrochloric acid. Fine, bulky, white or light-gray, odorless, tasteless, insoluble powder. Filtering medium, particularly for acid solutions.

SILVER CITRATE.

White, odorless, heavy powder. Soluble in about 3800 parts water. Astringent and Bactericide, like silver nitrate.

Silver Colloidal. See *Solargentum*.

⊕ **Silver Nitrate, Squibb**

Crystals or *Granulated bottle, oz.

Argenti Nitras. AgNO_3 . Colorless, transparent, odorless, crystals or granules; bitter, caustic, metallic taste. Darkens on exposure to light. 1 Gm. dissolves in 0.4 mil (Cc.) water, 30 mls alcohol. Incompatible with alkalis, bromides, iodides, chlorides, hypophosphites, alkaloidal salts, tannic acid in solution; with vegetable infusions, tinctures, and decoctions; with all organic substances and reducing agents. Dispense solutions in black bottles. Escharotic, Astringent, Antiseptic. Average Dose: $\frac{1}{6}$ grain (0.01 Gm.). Antidotes: White of egg or milk; emetics subcutaneously; sodium or ammonium chloride. (See also Reagents [Part IV]; Tablets [Part II].)

Silver Nitrate 1% Solution, Squibb

box of 1 dozen Ampuls,

For prevention of ophthalmia neonatorum, 1 or 2 drops being instilled into each eye.

Silver Nitrate Crayons, Squibb bottle of 100,

Small crayons of pure silver nitrate, about $\frac{1}{16}$ in. thick and $\frac{1}{4}$ in. long. Especially designed for genito-urinary surgeons, and affording a convenient, sanitary means of cauterization, each crayon serving for one application only. Used in an applicator.

Silver Nitrate Mitigated, Squibb bottle, oz.

Argenti Nitras Mitigatus, U. S. P. VIIIth Rev.; Silver Nitrate Diluted. 66.7 percent. potassium nitrate, 33.3 percent. pure silver nitrate. Its constituents retain the solubility in water and in alcohol characteristic respectively of silver nitrate and potassium nitrate. Being made from pure materials, the product is free from all prohibited contaminations. Used externally where moulded silver nitrate is too powerful.

Silver Nitrate Moulded, Squibb bottle, oz.

Argenti Nitras Fusus; Lunar Caustic. Pure silver nitrate melted with approximately 4 percent. hydrochloric acid and moulded into small cones. Caustic, on warts, sluggish ulcers.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality; the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

SIOMINE.

Hexamethylenamine Tetraiodide. $(\text{CH}_2)_5\text{N}_4\text{I}_4$. White powder; slight odor and taste; 78.5 per cent. iodine; almost insoluble in water or alcohol. Succedaneum for potassium iodide.
Dose: 3 to 15 grains (0.2 to 1 Gm.).

SMITH'S SOLUTION BROMINE. See Solution Bromine.

SNAKE-ROOT, BLACK. See Cimicifuga.

SNAKE-ROOT, CANADA. See Asarum.

SNAKE-ROOT, SENECA. See Senega.

SNAKE-ROOT, VIRGINIA. See Serpentaria.

⊕ **Soap Powdered, Squibb** bottle, lb. ; ¼ lb.

Sapo; Castile Soap. Powderd hard soap, prepared from sodium hydroxide and olive oil. Soluble in water and alcohol. **Laxative, antidote for acid poisons.**

⊕ **Soap Soft, Squibb** jar, lb. ; ¼ lb.

Sapo Mollis; often erroneously called "Green Soap." The U. S. P. now directs this soap to be made with cotton-seed oil, which was always used by the Squibb Laboratories because yielding a better soap than linseed oil. The Squibb soft soap has therefore been generally recognized as an excellent article. It is free from disagreeable odor, is of clear yellow color, contains no green coloring-matter, and is uniformly alkaline to the extent of no more than 0.25 percent. of caustic alkali. **Detergent, Antipruritic; in parasitic skin diseases, etc.**

Soap Soft, Liquid, Squibb lb. ; ½ lb. ; ¼ lb.

Preceding product rendered liquid by addition of water.

SOAP BARK. See Quillaja.

Soda, Caustic. See Sodium Hydroxide.

SODA MINT. See Solution Soda and Mint.

SODA WITH LIME.

Soda cum Calce, N. F.; London Paste. Equal parts sodium hydroxide and calcium oxide, powdered. **Caustic.** Keep well stoppered, in dry place.

Sodium Acetate Crystals, Reagent.

See Reagents (Part IV).

Sodium Acetate (Dried), Squibb tin, lb.

Sodii Acetas. $\text{NaC}_2\text{H}_3\text{O}_2$. Anhydrous; not official, crystalline salt with three molecules of water. White powder; cooling, saline taste. Of best medicinal efficacy, and superior for compounding and dispensing purposes. Freely soluble in water, less readily in alcohol. **Diuretic; also used in photography.**
Ordinary Dose: 10 grains (0.65 Gm.). (See also Reagents, Part IV.)

Sodium Acid Phosphate. See Sodium Phosphate, Acid.

SODIUM ARSANILATE. See Atoxyl.

⊕ **Sodium Arsenate (Cryst.), Squibb** bottle, oz.

Sodii Arsenas. $\text{Na}_2\text{HASO}_4 \cdot 7\text{H}_2\text{O}$. Colorless, transparent, odorless prisms; mild, alkaline taste; efflorescent in dry air, slightly deliquescent in moist air. 1 Gm. dissolves in 1.5 mls (Cc.) water, 2 glycerin; sparingly soluble in alcohol. Alterative, Antiperiodic; in malaria, nervous diseases, skin affections, rheumatism, etc.; also used in cigarettes for asthma and phthisis, and as Reagent. **Dose:** $\frac{1}{12}$ grain (0.005 Gm.). **Antidotes:** arsenic antidote, or milk with magnesia; then emetics.

Sodium Arsenate Exsiccated, Squibb bottle, oz.

Sodii Arsenas Exsiccatus. Preceding article deprived of its crystal water. White, odorless, amorphous, slightly hygroscopic powder. 1 Gm. dissolves in 3.1 mls (Cc.) water; slightly soluble in alcohol. **Average Dose:** $\frac{1}{20}$ grain (0.003 Gm.).

Sodium Arsenite, Squibb bottle, oz.

NaAsO_2 . Grayish-white powder. Soluble in water, slightly in alcohol. Uses chiefly technical.

⊕ **Sodium Benzoate, Squibb**

*From Synthetic Acid tin, $\frac{1}{4}$ lb. oz.
 *From Natural (True) Acid bottle, oz.

Sodii Benzoas. $\text{NaC}_7\text{H}_5\text{O}_2$. White, nearly odorless powder; sweetish taste. 1 Gm. dissolves in 1.8 mls (Cc.) water, 61 alcohol. Mild Antiseptic; in cystitis, tonsillitis, colds, etc. **Average Dose:** 15 grains (1 Gm.). Incompatible with mineral acids, ferric salts.

Sodium Benzosulphinide, Squibb bottle, oz.

Sodii Benzosulphinidum; Soluble Saccharin; Sodium-Saccharin. White, odorless, intensely sweet powder. 1 Gm. dissolves in 1.2 mls (Cc.) water, 50 alcohol. Non-fermentable sweetener; taste corrigent for bitter or acrid drugs. About 380 times as sweet as cane sugar.

Sodium Biborate. See Sodium Borate.

⊕ **Sodium Bicarbonate, Squibb** tin, lb. ; $\frac{1}{2}$ lb. $\frac{1}{4}$ lb.

Sodii Bicarbonas. NaHCO_3 . Conforming to the most rigid demands for purity. Uniformly fine, bolted powder. The absence of sodium carbonate renders it free from the bitter

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. When prescribing, please specify SQUIBB'S.

⊕ **Sodium Bicarbonate, Squibb (Cont.)**

taste noticeable when even small traces of latter are present, as in the ordinary grades. 1 Gm. dissolves in 10 mls (Cc.) water (boiling water changes it to carbonate); insoluble in alcohol. Antacid; Antipruritic topically. Average Dose: 15 grains (1 Gm.); in iodism and diabetic coma larger doses (2 ozs. or more daily) are given. Incompatible with acids, acid salts, bismuth subnitrate, etc. (See also Reagents [Part IV].)

Sodium Biphosphate. See Sodium Phosphate, Acid.

Sodium Bisulphate, Squibb bottle, lb. ; ¼ lb.

$\text{NaHSO}_4 \cdot \text{H}_2\text{O}$. Pure, colorless crystals. Soluble in water. Used largely in typhoid fever, and as purifier of drinking water in typhoid regions. Dose: 15 grains (1 Gm.) every few hours, with water. (See also Reagents [Part IV].)

Sodium Bisulphite Reagent. See Reagents (Part IV).

Sodium Bitartrate, Squibb bottle, lb. ; ¼ lb.

$\text{NaHC}_4\text{H}_4\text{O}_6 \cdot \text{H}_2\text{O}$. Small, white crystals, or white crystalline powder. 1 Gm. dissolves in about 9 mls (Cc.) water. Refrigerant, Aperient. Dose: 30 to 60 grains (2 to 4 Gm.). (See also Reagents [Part IV].)

⊕ **Sodium Borate, Squibb**

(Powdered) tin, lb. ; ¼ lb.

Sodii Boras; Borax; Sodium Biborate. $\text{Na}_2\text{B}_4\text{O}_7 \cdot 10\text{H}_2\text{O}$. A special medicinal quality. 1 Gm. dissolves in 15 mls (Cc.) water, about 1 mil glycerin; insoluble in alcohol. Alkaline Antiseptic Detergent and Astringent, externally; rarely used internally, as Emmenagogue and Antiepileptic. Dose: 12 grains (0.75 Gm.). Incompatible with acids, alkaloidal and metallic salts in solution, mucilage acacia, etc. (See also Reagents [Part IV].)

SODIUM BORO-BENZOATE.

Sodii Boro-Benzoas, N. F. 43% sodium borate, 57% sodium benzoate. Alkaline Antiseptic. Average Dose: 30 grains (2 Gm.).

⊕ **Sodium Bromide, Squibb**

(Granular) bottle, lb. ; ¼ lb.

Sodii Bromidum. NaBr. White granular powder; saline, slightly bitter taste. 1 Gm. dissolves in 1.1 mls (Cc.) water, 16 alcohol. Incompatible with acids, alkaloidal and metallic salts in solution. Nerve Sedative, Cerebral Depressant. Average Dose: 15 grains (1 Gm.). Absorbed and eliminated slowly, and where long continued should be omitted for a few days in every month.

⊕ **Sodium Cacodylate, Squibb** oz. vial ; $\frac{1}{8}$ oz.

Sodii Cacodylas; Sodium Dimethylarsenate. $\text{Na}(\text{CH}_3)_2\text{AsO}_2 \cdot 3\text{H}_2\text{O}$. Small, colorless, hygroscopic crystals; faint garlicky odor. 1 Gm. dissolves in about 0.5 mil (Cc.) water; 2.5 mls alcohol; sparingly in ether, chloroform. Contains 35 percent. arsenic (equivalent to 47 percent. arsenous acid). Alterative, Hematinic; like arsenous acid, but relatively non-toxic. Used mainly hypodermically in anemias, syphilis, chronic skin diseases, diabetes, etc. **Average Dose:** 1 grain (0.065 Gm.); in syphilis, 7 grains (0.45 Gm.), every second day or daily, by intramuscular injection or subcutaneously. (See also Ampuls.)

Sodium Carbonate Anhydrous Reagent, and Sodium Carbonate Crystals Reagent. See Reagents (Part IV.)**Sodium Carbonate Dried, Squibb** tin, lb.

$\text{Na}_2\text{CO}_3 \cdot 2\text{H}_2\text{O}$. Contains about 75 percent. anhydrous sodium carbonate. Antacid, Antipruritic; used largely pharmaceutically and technically. **Dose:** 5 to 10 grains (0.3 to 0.6 Gm.).

⊕ **Sodium Carbonate Monohydrated, Squibb** bot., lb.

Sodii Carbonas Monohydratus. $\text{Na}_2\text{CO}_3 \cdot \text{H}_2\text{O}$. White, crystalline powder; odorless, strongly alkaline taste. 1 Gm. dissolves in 3 mls (Cc.) water, 7 glycerin; insoluble in alcohol or ether. Antacid, Antipruritic, like sodium bicarbonate, but seldom used internally; also Reagent. Externally in 2 to 5 percent. solutions or 1:8 ointment in skin diseases. **Average Dose:** 4 grains (0.25 Gm.), well diluted. Incompatible with acids, acid salts, heavy metals and alkaloids, etc. **Antidotes:** acetic acid or lemon juice; olive oil.

Sodium Chlorate, Squibb

(Granular) tin, lb. ; $\frac{1}{4}$ lb. ; oz.

Sodii Chloras, U. S. P. VIIIth Rev. NaClO_3 . Colorless odorless, granular salt; cooling, saline taste. Soluble in 1 part water, 100 alcohol, 5 glycerin. Antiseptic, Astringent, Antisialagogue, externally; Alterative, internally, like potassium chlorate. **Average Dose:** 4 grains (0.25 Gm.). Explosion may occur when sodium chlorate is heated or subjected to concussion or trituration with organic substances (cork, tannic acid, sugar, etc.), or with sulphur, antimony sulphide, phosphorus, or other easily oxidizable substances. **Antidotes:** emetics, diuretics; ice; opium; pilocarpine; caffeine subcutaneously. (See also Reagents [Part IV].)

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

⊕ Sodium Chloride, Squibb bottle, lb.

Sodii Chloridum. NaCl. Highly purified, for use in transfusion, hypodermoclysis, and other cases where an especially pure product is required. The chlorides and sulphates of calcium and magnesium, and other impurities, have been removed. 1 Gm. dissolves in 2.8 mils (Cc.) water, 10 glycerin; almost insoluble in alcohol. Occasionally used as Emetic. **Average Dose:** 240 grains (15 Gm.). (See also Reagents [Part IV]; Tablets, Salt [Part II].)

Sodium Citrate, Squibb bottle, lb. ; ¼ lb.

Sodii Citras. $\text{Na}_3\text{C}_6\text{H}_5\text{O}_7 \cdot 2\text{H}_2\text{O}$. White, odorless, granular powder; efflorescent in dry air; cooling, saline taste. 1 Gm. dissolves in 1.3 mil (Cc.) water; insoluble in alcohol. Systemic Alkali, Diuretic. **Average Dose:** 15 grains (1 Gm.). (See also Reagents [Part IV]; Tablets [Part II].)

SODIUM CYANIDE.

Sodii Cyanidum. Newly official. NaCN. White, opaque pieces; or white, granular powder; odorless when dry, but exhaling odor of hydrocyanic acid when damp. Freely soluble in water. Cough Sedative, Antispasmodic. **Ordinary Dose:** 1/6 grain (0.01 Gm.). **Antidotes:** chlorine water or chlorinated-soda solution, emetics; solution hydrogen peroxide hypodermically; ammonia; artificial respiration.

Sodium Cyanide Reagent. See Reagents (Part IV).

SODIUM DIETHYLBARBITURATE. See Barbitol-Sodium.

Sodium Dimethylarsenate. See Sodium Cacodylate.

Sodium Glycerophosphate (Dry), Squibb

bottle, lb. ; ¼ lb. ; oz.

Sodii Glycerophosphas. Hydrated Sodium Glycerophosphate containing not less than 68 percent. anhydrous $\text{Na}_2\text{C}_3\text{H}_7\text{PO}_6$. White, odorless powder; saline taste. Soluble freely in water; almost insoluble in alcohol. Used as Nerve Tonic, and usually given with other glycerophosphates. **Average Dose:** 4 grains (0.25 Gm.). (See also Elixir; Solution; Tablets [Part II].)

SODIUM GLYCEROPHOSPHATE 50%. See Solution Sodium Glycerophosphate.

Sodium Glycocholate, Squibb

1-oz. vial, ; 1/8-oz. vial,

One of the bile salts. Greenish-black, very bitter granules; peculiar odor. Soluble in water or alcohol with turbidity. Cholagogue. **Dose:** 5 to 15 grains (0.3 to 1 Gm.), as tablets. (See also Tablets [Part II].)

⊕ **Sodium Hydroxide, Squibb** bottle, lb. ; ¼ lb.

Sodii Hydroxidum; Sodium Hydrate; Soda; Caustic Soda. NaOH. Electrolytic; exceptionally pure, and assays higher than U. S. P. requirements of 90 percent. Small, white, crushed lumps. 1 Gm. dissolves in 0.9 mil (Cc.) water; very soluble in alcohol. Caustic, Antacid. **Dose:** ½ to 1 grain (0.03 to 0.065 Gm.) well diluted. **Antidotes:** water, then vinegar or lemon juice, followed by emetics; demulcents. **NOTE:** On exposure sodium hydroxide deliquesces, absorbs carbon dioxide and becomes coated with carbonate. Hence keep well-stoppered, in dry place. (See also Reagents [Part IV]; Solution.)

Sodium Hypophosphite, Squibb

bottle, lb. ; ¼ lb. ; oz.

Sodii Hypophosphis. $\text{NaPH}_2\text{O}_2 \cdot \text{H}_2\text{O}$. Small, colorless plates, or white granular powder; odorless; bitterish-sweet, saline taste; deliquescent in moist air. 1 Gm. dissolves in 1 mil (Cc.) water, 2 mils glycerin; soluble in alcohol; insoluble in ether. Ingredient of hypophosphite mixtures used as Tonics. **Average Dose:** 15 grains (1 Gm.). Care should be observed in dispensing this salt, as explosion may occur when it is triturated or heated with nitrates, chlorates or other oxidizing agents.

Sodium Hyposulphite. See Sodium Thiosulphate.

⊕ **Sodium Iodide, Squibb** bottle, oz.

Sodii Iodidum. NaI. Made by a special Squibb process. White, odorless, crystalline powder; saline, slightly bitter taste; deliquescent in moist air. 1 Gm. dissolves in 0.55 mil (Cc.) water, about 2 mils alcohol, 1 glycerin. Alterative, Resolvent, Saline Expectorant, like potassium iodide. **Average Dose:** 5 grains (0.3 Gm.). Incompatible with many alkaloidal salts, spirit nitrous ether, potassium chlorate, acids, bismuth and ferric salts, etc.

Sodium Nitrate, Squibb bottle, lb.

Chili Saltpetre. NaNO_3 . Dropped from U. S. P. Colorless, granular salt; cooling, saline, slightly bitter taste; hygroscopic in moist air. Soluble in about 1.1 parts water, 100 alcohol. Rarely used in human medicine, at present; in intestinal catarrhs, rheumatism, dropsy, etc. **Ordinary Dose:** 15 grains (1 Gm.) well diluted. Externally (in rheumatism), in 1:3 solution. **Antidotes:** stimulants; ice water; opium. (See also Reagents [Part IV].)

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

⊕ **Sodium Nitrite, Squibb** bottle, $\frac{1}{4}$ lb. ; oz.

Sodii Nitris. 95% NaNO_2 . White granules; odorless; mild, saline taste. 1 Gm. dissolves in 1.5 mils (Cc.) water; slightly soluble in alcohol. Vaso-dilator, similar to nitroglycerin but slower and more prolonged. Average Dose: 1 grain (0.065 Gm.). Incompatible in solution with acetanilid, antipyrine, hypophosphites, iodides, vegetable infusions, decoctions or tinctures, or mercury salts. Keep well stoppered; on exposure it deliquesces and is oxidized to nitrate. (See also Reagents [Part IV].)

Sodium Nitroprusside Reagent. See Reagents (Part IV).

Sodium Oxalate Reagent. See Reagents (Part IV).

SODIUM PERBORATE.

Sodii Perboras. $\text{NaBO}_3 \cdot 4\text{H}_2\text{O}$. White, granular, odorless salt. Soluble in water, decomposing into hydrogen peroxide and sodium metaborate. Antiseptic, Deodorant, Bactericide; in 2% solution or as dusting powder, on purulent wounds, etc.

Sodium Peroxide Reagent. See Reagents (Part IV).

Sodium Phenolsulphonate, Squibb bottle, oz.

Sodii Phenolsulphonas; Sodium Sulphocarbolate. $\text{C}_6\text{H}_5\text{O} \cdot \text{SO}_3\text{Na} \cdot 2\text{H}_2\text{O}$. It is a very difficult matter to make an article of correct chemical identity and satisfactory purity. The product quoted contains the officially required 99 percent. pure sodium paraphenolsulphonate. White or nearly white powder; cooling, saline, bitter taste; slightly efflorescent. 1 Gm. dissolves in 4.2 mils (Cc.) water, 140 alcohol, about 5 glycerin. Used as Intestinal Antiseptic; mostly internally in typhoid fever, fermentative dyspepsia, phthisical diarrhea, etc. Average Dose: 4 grains (0.25 Gm.). Externally in $\frac{1}{2}$ to 1 percent. solution; in gonorrhea, putrid wounds, etc.

⊕ **Sodium Phosphate, Squibb**

(Granular) tin, lb. ; $\frac{1}{2}$ lb. ; $\frac{1}{4}$ lb.
bottle, lb. ; $\frac{1}{2}$ lb. ; $\frac{1}{4}$ lb.

Sodii Phosphas; Disodium Orthophosphate. $\text{Na}_2\text{HPO}_4 \cdot 12\text{H}_2\text{O}$. Much of the sodium phosphate on the market contains arsenic in quantities sufficient to render its use dangerous. The article here listed has been recrystallized and purified until no trace of arsenic can be detected in 5 Gm. by the Marsh-Berzelius test in $\frac{1}{2}$ hour. Colorless; odorless; cooling, saline taste. Very efflorescent. 1 Gm. dissolves in 2.7 mils (Cc.) water; insoluble in alcohol. Incompatible with solutions of alkaloidal salts, and, on trituration, with antipyrine, phenol, chloral hydrate, resorcin, salicylic acid or sodium salicylate. Keep well closed, in cool place. Saline Cathartic, similar to magnesium sulphate (epsom salt). Average Dose: 60 grains (4 Gm.); as much as 240 grains (16 Gm.) is often given. (See also Reagents [Part IV].)

⊕ **Sodium Phosphate, Acid, Squibb**

bottle, lb. ; ¼ lb. ; oz.

Sodium Biphosphate; Monosodium Dihydrogen Phosphate. $\text{NaH}_2\text{PO}_4 + \text{aq}$. Colorless, slightly hygroscopic granules; acid reaction. Soluble in less than 1 part water; insoluble in alcohol. Urine-acidifier, usually given in conjunction with hexamethylenamine as urinary bactericide administered two hours before latter drug. **Dose:** 15 to 20 grains (1 to 1.3 Gm.), in sweetened, flavored solution, as often as required to render urine acid.

⊕ **Sodium Phosphate, Granular Effervescent, Squibb**

bottle, lb. ; 4-oz., per doz.

Sodii Phosphas Effervescens. 20 percent. exsiccated sodium phosphate. **Average Dose:** 150 grains (10 Gm.).

Sodium Phosphate Compound, Granular Effervescent, Squibb

4-oz. bottles with dose-measures, per doz.

Formerly called G. E. Antilithic. Suggested by Dr. H. H. Tinker, of New York, as an agreeable and efficient Eliminant in gout, rheumatism and all conditions connected with the uric acid diathesis. Each drachm contains 5 grains Dried Sodium Phosphate, and 1 grain each Sodium Benzoate and Sodium Salicylate True, all of the Squibb quality. **Ordinary Dose:** 2 drachms (8 Gm.).

Sodium Phosphate Exsiccated, Squibb

bottle, lb. ; ¼ lb.

Sodii Phosphas Exsiccatus; Dried or Anhydrous Sodium Phosphate. Na_2HPO_4 . Crystalline sodium phosphate is very apt to effloresce and become uncertain in dosage. This disadvantage, combined with the largeness of the dose, has created a preference for the dried salt, the dose of which is only one-half that of the granular salt. Exceedingly hygroscopic, hence must be kept well stoppered and in a dry place.

Sodium Phosphate Liquefied. See Solution Sodium Phosphate Compound.

Sodium Pyrophosphate, Squibb

tin, lb. ; ¼ lb. ; oz.

Sodii Pyrophosphas, U. S. P., VIIIth Rev. $\text{Na}_4\text{P}_2\text{O}_7 \cdot 10\text{H}_2\text{O}$. Colorless, odorless, transparent prisms, or white powder, of cooling, saline, feebly alkaline taste; slightly efflorescent. Soluble in about 11.5 parts water; insoluble in alcohol. Laxative, similar to sodium phosphate. **Average Dose:** 30 grains (2 Gm.).

⊕ **Sodium Salicylate, Squibb**

* From Synthetic Acid, Powdered

tin, lb. ; ¼ lb. ; oz.

Sodii Salicylas. $\text{NaC}_7\text{H}_5\text{O}_3$. White or faintly pinkish pow-

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

⊕ **Sodium Salicylate, Squibb (Cont.)**

der; odorless or nearly so; sweetish, saline taste. 1 Gm. dissolves in 0.9 mil (Cc.) water, 9.2 alcohol; soluble also in glycerin. Antirheumatic, Antineuralgic, Antiseptic. **Average Dose:** 15 grains (1 Gm.). Incompatible with ferric salts, acids, and acid salts, quinine salts in solution, etc. (See also Tablets [Part II].)

Sodium Salicylate from Natural (True) Acid, Squibb
(Powdered) bottle, lb. ; ¼ lb. ; oz.

Prepared with natural (true) salicylic acid derived from pure oil betula. Believed by many physicians to be better borne and more efficient than sodium salicylate prepared from synthetic acid; according to Council on Ph. & C. of A. M. A., not superior to latter. (See also Tablets [Part II].)

⊕ **Sodium Sulphate, Squibb** tin, lb. ; ¼ lb.

Sodii Sulphas; Glauber's Salt. Granular. $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$. Colorless, transparent, efflorescent granules; odorless; of bitter, saline taste. 1 Gm. dissolves in about 1 mil (Cc.) water; soluble in glycerin; insoluble in alcohol. Saline Cathartic; more unpleasant than magnesium sulphate. **Average Dose:** 240 grains (15 Gm.). Keep well stoppered; very efflorescent. (See also Reagents [Part IV].)

Sodium Sulphate Dried, Squibb bottle, lb. ; ¼ lb.

$\text{Na}_2\text{SO}_4 \cdot \text{H}_2\text{O}$. The crystalline salt deprived of water of crystallization. Therapeutically twice strength of crystals or granular salt, besides having the advantage of being more uniform and stable.

Sodium Sulphate Anhydrous, Reagent. See Reagents (Part IV).**Sodium Sulphate, Granular Effervescent, Squibb**

bottle, lb. ; 4 ozs., per doz.

Contains 30 grains sodium sulphate per drachm. **Dose:** 2 to 8 drachms (8 to 30 Gm.).

⊕ **Sodium Sulphite Dried, Squibb** tin, lb. ; ¼ lb.

Sodii Sulphis Exsiccatus. Na_2SO_3 . Granular salt, made from high-quality crystalline sulphite by depriving it of its crystal water. Readily and almost perfectly soluble in water; very sparingly soluble in alcohol. Antiseptic, Antizymotic; used mainly as mouthwash in stomatitis, in 1:16 solution. **Average Dose:** 15 grains (1 Gm.). Incompatible with mineral acids. Keep well-stoppered, in cool place.

Sodium Sulphocarbolate. See Sodium Phenolsulphonate.**Sodium Tartrate, Squibb** bottle, ¼ lb.

White, odorless, almost tasteless crystals. Freely soluble in water. Succedaneum for Rochelle and Epsom salts. **Dose:** purgative, 4 to 8 drachms (15 to 30 Gm.); diuretic and refrigerant, 15 to 45 grains (1 to 3 Gm.).

⊕ **Sodium Thiosulphate, Squibb** tin, lb.

Sodii Thiosulphas. $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$. More commonly but incorrectly called "Sodium Hyposulphite." Colorless, granular salt; cooling, afterwards bitter taste; efflorescent in warm air, slightly deliquescent in moist air. 1 Gm. dissolves in 0.5 mil (Cc.) water; insoluble in alcohol. Antiparasitic, Antizymotic, Cathartic. Used largely in photography; also to remove iodine and silver nitrate stains, etc. **Average Dose:** 15 grains (1 Gm.). Incompatible with acids, iodine, chlorine, solutions of nitrates, silver or lead salts. Keep can well closed, in cool place. (See also Reagents [Part IV].)

Sodium and Ammonium Phosphate Reagent. See Reagents (Part IV).

Sodium and Potassium Tartrate. See Potassium and Sodium Tartrate.

SOLANUM.

Solanum, N. F.; Horse-nettle Berries. Air-dried ripe fruit of *Solanum carolinense* (Fam. *Solanaceæ*). Pepper-like odor; bitter, acrid taste. Used as Sedative, in convulsions and epilepsy. **Average Dose:** 60 grains (4 Gm.).

Solargentum, Squibb bottle, lb. ; ¼ lb. ; oz.

Brownish-black, lustrous, odorless granules, containing 19 to 23 percent. silver in colloidal form, associated with an organic protective colloid. Nonhygroscopic under ordinary conditions. Freely and quickly soluble in water; neutral and perfectly non-irritating in any strength; not precipitated from its solutions by sodium chloride, and does not coagulate albumin. Non-irritant Antiphlogistic and Germicide; in gonorrhea, and in inflammation of the eyes, ear, nose and throat. Used chiefly in 1 to 25 percent. or stronger solutions; also in bougies and suppositories. [CAUTION.—There are a number of colloid silver preparations on the market, of differing descriptions. It is therefore necessary to specify "Solargentum, Squibb" when this product is desired.]

⊕ **SOLUTION ACID ARSENOUS.**

Liquor Acidi Arsenosi; frequently erroneously designated as "Solution Arsenic Chloride." Containing 1 percent. arsenic trioxide in solution with dilute hydrochloric acid and water. Alternative, Antiperiodic. **Average Dose:** 3 minims (0.2 mil [Cc.]), in water. Antidotes: arsenic antidote, or magnesia in milk; then emetics. Incompatible with iron in solution, with vegetable astringent infusions, tinctures or decoctions.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

Solution Acid Carbolic (Crude), Squibb quart

2 percent. solution of crude 90 percent. carbolic acid. Used for general Disinfectant and household purposes. It may, without injury or staining, be freely sprinkled upon bedding, clothing, carpets, floors, furniture, etc., or, when further diluted, may be applied to the body. This dilute solution may be safely entrusted to hands unskilled in the use of powerful medicinal agents, and yet is strong enough for most useful purposes. **Antidotes:** alcohol or whiskey freely at once; emetics hypodermically; raw white of egg, or other demulcents.

⊕ **Solution Aluminum Acetate, Squibb** bottle, pint,

Liquor Alumini Acetatis, N. F.; Burow's Solution; *not* Solution Aluminum Acetate, N. F. III. Made by interaction of lead acetate and aluminum sulphate. Contains 4.5 to 5.5 Gm. neutral aluminum acetate in 100 mls (Cc.). External Antiseptic and Astringent; used diluted with 1 to 3 parts water.

SOLUTION ALUMINUM ACETO-TARTRATE.

Liquor Alumini Acetico-Tartratis, N. F. Contains about 50 percent. aluminum aceto-tartrate made extemporaneously. External Astringent, Antiseptic.

⊕ **SOLUTION ALUMINUM SUBACETATE.**

Liquor Alumini Subacetalis, N. F.; formerly officially known as Solution Aluminum Acetate. Contains 7.5 to 8 percent. basic aluminum acetate. External Antiseptic and Astringent; used diluted with 1 to 3 parts water.

⊕ **SOLUTION AMMONIUM ACETATE.**

Liquor Ammonii Acetatis; Spirit of Mindererus. 7 percent. Clear, colorless liquid, of mildly saline, acidulous taste. Diaphoretic, Diuretic. **Average Dose:** 4 fluidrachms (15 mls [Cc.]). Should not be dispensed unless recently prepared.

SOLUTION AMMONIUM CITRATE.

Liquor Ammonii Citratis, N. F. Each fluidounce represents about 72 grains ammonium citrate. Diaphoretic, Refrigerant. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Solution Antiseptic, Squibb bottle, pint

We have not adopted the N. F. IV formula for *Liquor Antisepticus*, which yields an unsightly product, but have adhered to U. S. P. VIIIth Rev. formula. Each 1000 mls (Cc.) contains 20 Gm. boric acid, 1 Gm. benzoic acid, 1 Gm. thymol, 0.25 mil eucalyptol, 0.5 mil oil peppermint, 0.25 mil methyl salicylate, 0.1 mil oil thyme, with alcohol and water. Used diluted with 1 to 4 parts water. **Average Dose:** 1 fluidrachm (4 mls).

Solution Antiseptic, Alkaline, Squibb bottle, pint

Liquor Antisepticus Alkalinus, N. F. 1000 mils (Cc.) contain 32 Gm. each potassium bicarbonate and sodium borate, 8 Gm. sodium benzoate, and a little eucalyptol, oil peppermint, methyl salicylate and thymol, with alcohol, glycerin and water. Employed externally in nose and throat affections; as a mouth wash; in burns, insect bites, leucorrhea, etc.; internally as Antifermentative. Used diluted with 1 to 4 parts water. **Dose:** 1 to 2 fluidrachms (4 to 8 mils [Cc.]).

SOLUTION ARSENIC, CLEMENS'.

Liquor Arsenicalis Clemens, N. F.; Solution Potassium Arsenate and Bromide; Solution Arsenic Bromide. Contains equivalent of 1 percent. arsenic trioxide as arsenate and bromide of potassium. Alterative; also used in diabetes. **Average Dose:** 3 minims (0.2 mil [Cc.]).

SOLUTION ARSENIC BROMIDE. See Solution Arsenic, Clemens'.

SOLUTION ARSENIC CHLORIDE. See Solution Acid Arsenous.

⊕ Solution Arsenic and Mercury Iodide, Squibb

bottle, pint, ; ¼ pint, ; oz.

Liquor Arseni et Hydrargyri Iodidi; Donovan's Solution. About 1 percent. each arsenous iodide and red mercuric iodide, in aqueous solution. Alterative, Antiluetic. **Average Dose:** 1½ minims (0.1 mil [Cc.]). Incompatible with alkalis and solutions alkaloidal salts. **Antidotes:** arsenic antidote, or milk and magnesia; then emetics.

SOLUTION BISMUTH.

Liquor Bismuthi, N. F.; Liquid Bismuth. Each fluidrachm contains 2 gr. bismuth and sodium tartrate with alcohol, glycerin and water. Used as Gastric Sedative. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Solution Bismuth, Concentrated. See Glycerite Bismuth.

SOLUTION BROMINE.

Liquor Bromi, N. F.; Smith's Solution Bromine. 25 percent. Br. with 5 percent. potassium bromide. Antiseptic. **Antidotes:** ammonia by inhalation; sodium carbonate in dilute solution; albumen.

Solution Bromine for Urea Estimation. See Urea Apparatus.

SOLUTION CALCIUM HYDROXIDE.

Liquor Calcis; Lime Water. Contains not less than 0.14 percent. $\text{Ca}(\text{OH})_2$. Antacid. **Dose:** 4 fluidrachms (15 mils [Cc.]).

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

SOLUTION CARMINE.

Liquor Carmini, N. F. Each 100 mls (Cc.) contains 6.5 Gm. carmine, 36.5 mls each ammonia water and glycerin, and water. Coloring.

SOLUTION, CHANNING'S. See Solution Mercury and Potassium Iodide.

SOLUTION CHLORINE COMPOUND.

Liquor Chlori Compositus, N. F.; Chlorine Water. 0.35 Gm. chlorine in 100 mls (Cc.). Yellow liquid; strong odor and taste of chlorine. Disinfectant, Antizymotic; Reagent. Average Dose: 1 fluidrachm (4 mls), well diluted. Very unstable; should not be dispensed unless recently made.

SOLUTION, CLEMENS'. See Solution Arsenic, Clemens'.

SOLUTION COAL TAR.

Liquor Picis Carbonis, N. F. Each 100 mls (Cc.) contains 20 Gm. coal tar dissolved by aid of 10 Gm. quillaja. Stimulating Antiparasitic and Antipruritic Dermic.

⊕ **Solution Cresol Compound, Squibb** bottle, pint

Liquor Cresolis Compositus. 50 percent. pure cresol, held in solution by soap produced from linseed oil and sodium hydroxide. Light-amber liquid; phenol-like odor. Soluble in warm water in all proportions. Darkens with age, but this does not affect its antibacterial action. Superior succedaneum for carbolic acid (phenol), having carbolic acid coefficient of about 3, hence three times as powerful as latter. Powerful Antiseptic, Disinfectant, Deodorant and Parasiticide. Does not precipitate albumen, attack instruments, nor stain linen. Used in 1 to 3 percent. solution, best made with warm water.

Solution, Dobell's. See Solution Sodium Borate Compound.

Solution, Donovan's. See Solution Arsenic and Mercury Iodide.

Solution, Fehling's. See under Fehling's Test Solution Elements.

⊕ **SOLUTION FORMALDEHYDE.**

Liquor Formaldehydi; Formalin; Formol. Aqueous solution containing not less than 37 percent. CH_2O . Clear, colorless liquid; pungent odor; caustic taste; irritating vapor; sp. gr. 1.075 to 1.078; miscible with water or alcohol. General Disinfectant, Deodorant, Antihydrotic; hardener of microscopical specimens. Used in $\frac{1}{2}$ to 2 percent. solution medicinally; in weaker solutions for hygienic purposes. Incompatible with alkalies, ammonia, and oxidizing agents. Antidotes: solution ammonium acetate; ammonia by inhalation.

Solution Fowler's. See Solution Potassium Arsenite.

Solution Glycerophosphates Compound, Squibb

(No Sugar) bottle, pint,

Each fluidounce contains 8 grains calcium glycerophosphate, 16 grains sodium glycerophosphate (75%); $1\frac{1}{2}$ grains iron glycerophosphate, 1 grain manganese glycerophosphate, $\frac{1}{2}$ grain quinine glycerophosphate, and $\frac{1}{16}$ grain strychnine glycerophosphate. Employed as Nerve tonic, where the corresponding elixir glycerophosphates compound is considered objectionable on account of the sugar. **Ordinary Dose:** 1 fluidrachm (4 mils [Cc.]), in water, before meals. (See also Elixir; Tablets [Part II].)

Solution Gold and Arsenic Bromide, Squibbg. s. bottle, pint, ; $\frac{1}{4}$ pint, ; oz.

Liquor Auri et Arseni Bromidi, N. F. III. Owing to the impossibility of procuring bromauric acid, called for in present N. F., these laboratories continue to supply the N. F. III product. Each 10 minims contains $\frac{1}{32}$ grain gold tribromide and $\frac{1}{40}$ grain arsenous acid. Used as Alterative, Antidiabetic, Antiepileptic. **Average Dose:** 3 minims (0.2 mil [Cc.]).

SOLUTION GUTTA PERCHA.

Liquor Guttæ Perchæ, N. F.; Traumaticin. 15 Gm. gutta percha dissolved in 100 mils (Cc.) chloroform. Protective, like collodion.

SOLUTION, HALL'S. See Solution Strychnine Acetate.

SOLUTION HYDRASTINE COMPOUND.

Liquor Hydrastinæ Compositus, N. F.; Colorless Hydrastine Solution. Each fluidounce contains about $1\frac{3}{8}$ grains each hydrastine hydrochloride, aluminum chloride, calcium chloride, and magnesium chloride, $\frac{1}{2}$ grain potassium chloride, 240 minims glycerin, and water. Antiseptic Astringent externally; Tonic and Hemostatic internally. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

⊕ Solution Hydrogen Peroxide, Squibbbottle, lb. ; $\frac{1}{2}$ lb. ; $\frac{1}{4}$ lb.

Liquor Hydrogenii Dioxidi; Solution Hydrogen Dioxide. 3 percent. H_2O_2 , equivalent to 10 volumes available oxygen. Made by an improved process which insures high purity and excellent keeping properties. Free from acetanilid and alcohol. A harmless, non-staining Antiseptic, Disinfectant and Deodorizer; on cuts, wounds, etc.; as an antiseptic mouth wash; deodorizer of the body, utensils, etc. Used pure or diluted with 1 to 3 parts water. Used also as Reagent. **Average Dose:** 1 fluidrachm (4 mils [Cc.]). Keep in cool place and quiet; occasionally remove the cork.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

SOLUTION HYPOPHOSPHITES.

Liquor Hypophosphitum, N. F. Each fluidounce contains about $16\frac{1}{4}$ grains calcium hypophosphite, 9 grains sodium hypophosphite, $8\frac{1}{8}$ grains potassium hypophosphite, in water; unsweetened. Alterative Tonic. Average Dose: 1 fluidrachm (4 mils [Cc.]). (See also Syrup.)

Solution Hypophosphites Compound, Squibb

(No Sugar)

pint,

Liquor Hypophosphitum Compositus, N. F. Each fluidounce contains about 4 grains each calcium and potassium hypophosphites, 1 grain each sodium, quinine and manganese hypophosphites, 2 grains ferric hypophosphite, and $\frac{1}{32}$ grain strychnine hypophosphite. Used in place of Syrup Hypophosphites Compound where sugar is objectionable. Average Dose: 1 fluidrachm (4 mils [Cc.]), after meals.

⊕ Solution Hypophysis, Squibb

box of 6×1 Cc. ampuls,box of 6×0.5 Cc. ampuls,

Liquor Hypophysis; Solution of Pituitary Body. Prepared under aseptic conditions from posterior lobes of fresh pituitary gland from cattle, and carefully standardized and sterilized. Stimulant and Constrictor of unstriated muscle, especially that of the uterus and blood vessels; used in second stage of labor, uterine atony with post-partum hemorrhage and other forms of uterine bleeding, shock and other conditions of low blood pressure, certain cases of pulmonary hemorrhage, post-operative intestinal paresis, etc. Average Dose: 16 minims (1 mil [Cc.]) hypodermically, repeated in 30 to 60 minutes if necessary.

SOLUTION IODINE COMPOUND.

Liquor Iodi Compositus; Lugol's Solution. Aqueous liquid containing about 5 percent. iodine and 10 percent. potassium iodide. Alterative. Average Dose: 3 minims (0.2 mil [Cc.]), diluted.

SOLUTION IODINE PHENOLATED.

Liquor Iodi Phenolatus, N. F.; Boulton's Solution. Each 100 mils (Cc.) contains 1.5 mils compound solution iodine, 0.6 mil liquefied carbolic acid, 16.5 mils glycerin, water q. s. Antiseptic.

SOLUTION IRON ACETATE.

Liquor Ferri Acetatis, N. F. 31 percent. anhydrous ferric acetate, equivalent to 7.5 percent. Fe. Hematinic, Hemostatic. Average Dose: 5 minims (0.3 mil [Cc.]).

Solution Iron Albuminate, Squibb

pint,

Of same Iron Albuminate strength as the *Liquor Ferri Albuminati*, N. F., but made by a process yielding a better article. Each fluidounce contains 2.4 grains metallic iron as albuminate. Hematinic. Average Dose: 2 fluidrachms (8 mils [Cc.]).

Solution Iron Chloride, Squibb g. s. bottle, pint

Liquor Ferri Chloridi. About 29 percent. anhydrous ferric chloride (equivalent to 10 percent. iron). Reddish-brown liquid; acid, strongly styptic taste; acid reaction. Sp. gr. 1.29 to 1.32. Astringent, Styptic, Hematinic; but used mainly pharmaceutically. **Average Dose:** $1\frac{1}{2}$ minims (0.1 mil [Cc.]), well diluted.

SOLUTION IRON CITRATE.

Liquor Ferri Citratis, N. F. Aqueous solution containing ferric citrate corresponding to 7.25 percent. Fe. Hematinic. **Average Dose:** 10 minims (0.65 mil [Cc.]).

SOLUTION IRON HYPOPHOSPHITE.

Liquor Ferri Hypophosphitis, N. F. Each fluidrachm contains about 10 grains iron hypophosphite, in glycerin and water. Hematinic. **Average Dose:** 15 minims (1 mil [Cc.]).

Solution Iron Iodide, Squibb

1-oz. ampuls, 2 in box, per box,

Designed for convenient preparation of Syrup Iron Iodide. Contains about 81 Gm. iron iodide (ferrous) in 100 mils (Cc.). Sp. gr. about 1.73. One volume with 11 volumes syrup makes syrup iron iodide of official strength.

Solution Iron Nitrate, Squibb lb.

Liquor Ferri Nitratis, N. F. Contains about 6 percent. anhydrous salt, or about 1.3 percent. metallic iron. Clear, reddish liquid; sp. gr. about 1.060. Astringent, Styptic, Hematinic. **Average Dose:** 5 minims (0.3 mil [Cc.]).

Solution Iron Oxychloride, Squibb pint

Liquor Ferri Oxychloridi, N. F. Contains ferric oxychloride corresponding to about 3 percent. metallic iron, dissolved in mixture of glycerin and water. Hematinic, Astringent, and Arsenic Antidote, but used mainly for preparing Solution Iron Albuminate. Solution Iron Peptonate, and Solution Iron Peptonate with Manganese. **Average Dose:** 30 minims (2 mils [Cc.]).

SOLUTION IRON OXYSULPHATE.

Liquor Ferri Oxysulphatis, N. F. 100 mils (Cc.) contain product of interaction of 16.5 Gm. each ferrous sulphate and nitric acid. Astringent.

Solution Iron Peptonate, Squibb pint

Liquor Ferri Peptonati, N. F. Each fluidounce contains about $2\frac{1}{4}$ grains metallic iron as peptonate. Hematinic. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Solution Iron Peptonate and Manganese, Squibb

pint,

Liquor Ferri Peptonati et Mangani, N. F. Each fluidounce contains about $2\frac{1}{4}$ grains metallic iron as peptonate and $\frac{3}{5}$ grain metallic manganese as citrate. Hematinic. Average Dose: 2 fluidrachms (8 mils [Cc.]), after meals.

Solution Iron Peptonate with Manganese and Arsenic, Squibb

pint,

Preceding article with addition of $\frac{1}{30}$ grain arsenous acid per fluidounce. Hematinic, Alterative. Ordinary Dose: 2 fluidrachms (8 mils [Cc.]).

SOLUTION IRON PROTOCHLORIDE.

Liquor Ferri Protochloridi, N. F.; Solution Ferrous Chloride. About 30 percent. FeCl_2 . Hematinic, Astringent; also used pharmaceutically. Average Dose: 10 minims (0.65 mil [Cc.]).

SOLUTION IRON SALICYLATE.

Liquor Ferri Salicylatis, N. F. Each 100 mils (Cc.) contains product of interaction of 12.5 Gm. sodium salicylate and 12.5 mils tincture iron citro-chloride, 17.5 mils glycerin, and 0.2 mil methyl salicylate as flavor. Used as Hematinic Antirheumatic. Average Dose: 2 fluidrachms (8 mils [Cc.]).

Solution Iron Subsulphate, Squibb bottle, lb. $\frac{1}{4}$ lb.

Liquor Ferri Subsulphatis; Monsel's Solution. 13 to 14 percent. iron. Dark, reddish-brown liquid, of strong, acid, styptic taste; sp. gr. about 1.548. Miscible in all proportions with water or alcohol. Liable to crystallize, and then becomes a dirty whitish, semi-solid mass. This does not injure the preparation in the least, and all that is needed to restore it to its original condition is to set it in a warm place until it melts. But even the unattractive-looking crystalline mass will be found to act as a styptic as effectually as the clear solution. Styptic, Astringent, pure or in strong solution; rarely used internally. Average Dose: 3 minims (0.2 mil [Cc.]).

Solution Iron Tersulphate, Squibb bottle, lb.

Liquor Ferri Tersulphatis; 36 percent. normal ferric sulphate; or 10 percent. metallic iron. Free from nitric acid and ferrous salt. Dark, reddish-brown, nearly odorless, acid liquid; strongly styptic taste; sp. gr. about 1.432. Miscible with water or alcohol. Astringent, Styptic, like subsulphate solution, but less powerful and more irritating.

SOLUTION IRON AND AMMONIUM ACETATE.

Liquor Ferri et Ammonii Acetatis; Basham's Mixture. Made from tincture ferric chloride, acetic acid, solution ammonium acetate, aromatic elixir, glycerin and water. Should be freshly made as wanted; spoils readily. Hematinic. Average Dose: 4 fluidrachms (15 mils [Cc.]).

Solution, Labarraque's. See Solution Soda Chlorinated.

⊕ **Solution Lead Subacetate, Squibb** lb.

Liquor Plumbi Subacetatis; Goulard's Extract. 25 percent. (equal to 18 percent. Pb). Clear, colorless, odorless liquid, of sweetish, astringent taste. Sp. gr. about 1.245. Astringent and Antiseptic, but used chiefly pharmaceutically and as Reagent.

SOLUTION LEAD SUBACETATE DILUTED.

Liquor Plumbi Subacetatis Dilutus; Lead Water; Goulard's Water. 1 percent. lead subacetate. External Astringent and Antiphlogistic, undiluted.

SOLUTION, LUGOL'S. See Solution Iodine Compound.

⊕ **SOLUTION MAGNESIUM CITRATE.**

Liquor Magnesii Citratis. 100 mls (Cc.) contain magnesium citrate corresponding to not less than 1.5 Gm. magnesium oxide. Mild, pleasant Saline Laxative. **Average Dose:** 12 fluidounces (350 mls [Cc.]).

SOLUTION MAGNESIUM SULPHATE EFFERVESCENT.

Liquor Magnesii Sulphatis Effervescens, N. F. Each 12 fluidounces contains 385 grains magnesium sulphate, with syrup citric acid as flavor. Saline Laxative. **Average Dose:** 12 fluidounces (350 mls [Cc.]).

SOLUTION MERCURY NITRATE.

Liquor Hydrargyri Nitratis, N. F. About 60 percent. mercuric nitrate, 11 percent. free nitric acid. Clear, nearly colorless liquid; faint odor of nitric acid; strongly acid reaction; sp. gr. about 2.086. Caustic. **Antidotes:** magnesia, chalk, or soap and water; emetics; raw eggs and demulcents.

SOLUTION MERCURY AND POTASSIUM IODIDE.

Liquor Hydrargyri et Potassii Iodidi, N. F.; Channing's Solution; Solution Potassium Iodohydrargyrate. 1 percent. red iodide of mercury, with 0.8 percent. potassium iodide. Alterative, Antisyphilitic. **Average Dose:** 3 minims (0.2 mil [Cc.]), after meals, diluted. Incompatible with alkaloidal salts or alkalies.

Solution, Monsel's. See Solution Iron Subsulphate.

SOLUTION NITROGLYCERIN. See Spirit Glyceryl Trinitrate.

This house supplies only one quality of each product: that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

SOLUTION PANCREATIN.

Liquor Pancreatini, N. F. Each fluidounce contains $8\frac{1}{8}$ grains pancreatin, and about 23 grains sodium bicarbonate, with glycerin, compound spirit cardamom, etc. Digestive, in intestinal indigestion. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SOLUTION, PEARSON'S. See Solution Sodium Arsenate, Pearson's.

SOLUTION PEPSIN.

Liquor Pepsini, N. F. Each fluidounce contains 2 grains pepsin, 4.8 minims hydrochloric acid, glycerin and water. Proteolytic. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

SOLUTION PEPSIN ANTISEPTIC.

Liquor Pepsini Antisepticus, N. F. Each 100 mils (Cc.) contains 5 Gm. pepsin, 0.05 mil each menthol, eucalyptol and glycerin, water. Antiseptic Solvent of false membrane, Stimulant of sluggish ulcers, etc.

SOLUTION PEPSIN AROMATIC.

Liquor Pepsini Aromaticus, N. F. Each fluidounce contains about $8\frac{1}{8}$ grains pepsin, 4.8 minims hydrochloric acid, with oils cinnamon, pimenta and cloves as flavor, alcohol, glycerin, water. Aromatic Digestive; Vehicle. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

SOLUTION PHOSPHATES ACID.

Liquor Phosphatum Acidus, N. F.; Solution Acid Phosphates. Acid solution of calcium and magnesium phosphates, extemporaneously made. Bone Nutrient, Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SOLUTION PHOSPHATES COMPOUND.

Liquor Phosphatum Compositus, N. F. Flavored, sweetened solution of phosphates of calcium, ammonium, potassium, sodium and iron; $16\frac{1}{4}$ grains ferric phosphate per fl. oz. Anticachectic, Bone Nutrient, Hematinic. **Ordinary Dose:** 1 fluidrachm (4 mils [Cc.]).

SOLUTION PHOSPHORUS.

Liquor Phosphori, N. F.; Thompson's Solution Phosphorus. $\frac{1}{24}$ grain phosphorus in 1 fluidrachm, with alcohol, spirit peppermint and glycerin. Stimulant of bone formation, in rickets, etc. **Average Dose:** 10 minims (0.65 mil [Cc.]). **Antidotes:** potassium permanganate; charcoal, or lime water; emetics.

Solution Potassa. See Solution Potassium Hydroxide.

SOLUTION POTASSA CHLORINATED.

Liquor Potassæ Chlorinataæ, N. F.; Javelle Water. Assays about 2 percent. available chlorine. Disinfectant, Antizymotic; used mostly externally (ulcers, aphthæ, tonsillitis, etc., in 1:8 dilution). **Dose:** 5 to 10 minims (0.3 to 0.65 Cc.) well diluted. **Antidotes:** white of egg, then emetics; ammonia water.

SOLUTION POTASSIUM ARSENATE AND BROMIDE. See Solution Arsenic, Clemens'.

⊕ **Solution Potassium Arsenite, Squibb**

bottle, pint ; oz.

Liquor Potassii Arsenitis; Fowler's Solution (Arsenical). Contains potassium arsenite equivalent to about 1 percent. arsenic trioxide, with compound tincture lavender as flavor. Alterative, Antiperiodic. **Average Dose:** 3 minims (0.2 mil [Cc.]). **Antidotes:** arsenic antidote, or milk and magnesia; emetics.

SOLUTION POTASSIUM CITRATE.

Liquor Potassii Citratis. Aqueous solution containing 8 percent. anhydrous potassium citrate. Clear, colorless, odorless liquid; mildly saline taste. Systemic Alkali, Diuretic. **Average Dose:** 4 fluidrachms (15 mils [Cc.]). Should not be dispensed unless recently made.

⊕ **Solution Potassium Hydroxide, Squibb**

rubber-stopper bottle, pint

Liquor Potassii Hydroxidi; Solution Potassa. Carefully made from an exceptionally pure potassium hydroxide, of which it contains from 4.5 to 5 percent. Clear, colorless liquid; acrid, caustic taste, strongly alkaline reaction; sp. gr. about 1.046. Systemic Antacid. **Average Dose:** 15 minims (1 mil [Cc.]), diluted. **Antidotes:** lemon juice or vinegar; milk and eggs.

SOLUTION POTASSIUM IODOHYDRARGYRATE. See Solution Mercury and Potassium Iodide.

SOLUTION SALT, PHYSIOLOGICAL. See Solution Sodium Chloride.

Solution Soda. See Solution Sodium Hydroxide.

Solution Soda for Urea Estimation. See Urea Apparatus.

⊕ **Solution Soda Chlorinated, Squibb**

rubber-stopper bottle, per doz. pints

Liquor Sodæ Chlorinatæ (Chloratæ), U. S. P. 1870; Labarraque's Solution. A more satisfactory product than present official formula yields. Contains 2.5 percent. available chlorine. Pale-greenish liquid; faint chlorine odor; disagreeable taste; sp. gr. about 1.050. Disinfectant, Antizymotic. **Ordinary Dose:** 15 minims (1 mil [Cc.]), diluted. Externally, diluted with 2 to 4 parts water. **Antidotes:** ammonia water, then emetics; milk and eggs.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

SOLUTION SODA AND MINT.

Liquor Sodæ et Menthæ, N. F.; Mixture Soda and Spearmint. Each fluidounce represents $22\frac{1}{2}$ grains sodium bicarbonate and 5 minims aromatic spirit ammonia, with spearmint water. Antacid, Carminative. Average Dose: 2 fluidrachms (8 mils [Cc.]). Incompatible with alkaloidal salts or acids.

SOLUTION SODIUM ARSENATE.

Liquor Sodii Arsenatis Pearson, N. F.; Pearson's Solution. 0.1 percent. exsiccated sodium arsenate. Not to be confounded with Solution Sodium Arsenate U. S. P. VIIIth. Rev., which is ten times stronger. Alterative, Antiperiodic; in chronic skin diseases, chorea, neuralgia, etc. Average Dose: 30 minims (2 mils [Cc.]).

Solution Sodium Borate Compound, Squibb pint

Liquor Sodii Boratis Compositus, N. F.; Dobell's Solution. About 1.5 percent. each sodium borate and sodium bicarbonate, 0.3 percent. carbolic acid, glycerin and water. Alkaline Antiseptic; in nasal and laryngeal affections chiefly.

SOLUTION SODIUM CHLORIDE PHYSIOLOGICAL.

Liquor Sodii Chloridi Physiologicus; Normal Salt Solution. Sterilized. 0.85 percent. For venous transfusion, hypodermoclysis, etc.

SOLUTION SODIUM CITRATE.

Liquor Sodii Citratis, N. F.; River's Potion. Each 100 mils (Cc.) contains product resulting from action of 2 Gm. citric acid on 2.5 Gm. sodium bicarbonate. Systemic Alkali, Diuretic. Average Dose: 2 fluidrachms (8 Cc.). Should be freshly made as ordered.

SOLUTION SODIUM CITRO-TARTRATE EFFERVESCENT.

Liquor Sodii Citro-Tartratis Effervescens, N. F. Each 350 mils (12 fl. oz.) contains product of interaction of sodium bicarbonate 26 Gm., tartaric acid 24 Gm., citric acid 2 Gm., with syrup citric acid 50 mils (Cc.) and water. Refrigerant, Laxative. Average Dose: 12 fluidounces (350 mils).

Solution Sodium Glycerophosphate, Squibb

bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Liquor Sodii Glycerophosphatis. Aqueous solution containing 50 percent. anhydrous $\text{Na}_2\text{C}_3\text{H}_7\text{PO}_6$. Clear, colorless or yellowish, syrupy liquid. Used as Nerve Tonic. Average Dose: 6 minims (0.4 mil [Cc.]). (See also Sodium Glycerophosphate.)

⊕ Solution Sodium Hydroxide, Squibb

rubber-stopper bottle, pint,

Liquor Sodii Hydroxidi; Solution Soda. Contains 4.5 to 5 percent. sodium hydroxide; sp. gr. about 1.056. Very acrid, caustic taste. Systemic Antacid. Average Dose: 15 minims (1 mil [Cc.]), diluted. Antidotes: lemon juice or vinegar; milk and eggs.

Solution Sodium Phosphate Compound, Squibb pint

Liquor Sodii Phosphatis Compositus, N. F.; Liquefied Sodium Phosphate. Made from sodium phosphate, citric acid, glycerin and water. 1 mil (Cc.) represents 1 Gm. sodium phosphate. Laxative. Average Dose: 2 fluidrachms (8 mls).

SOLUTION STRYCHNINE ACETATE.

Liquor Strychninæ Acetatis, N. F.; Hall's Solution Strychnine. $\frac{1}{8}$ grain strychnine acetate in 1 fluidrachm, with alcohol, compound tincture cardamom and water. Nervine, Stomachic. Average Dose: 10 minims (0.65 mil [Cc.]). Antidotes: tannin, then emetics; chloral hydrate with bromides per rectum; chloroform by inhalation if required.

SOLUTION SULPHURATED LIME.

Liquor Calcis Sulphuratæ, N. F.; Vleminckx's Lotion or Solution. Each 100 mls (Cc.) represents product resulting from 16.5 Gm. calcium oxide and 25 Gm. sublimed sulphur. Depilatory.

SOLUTION TAR ALKALINE.

Liquor Picis Alkalinus, N. F. Each 100 mls (Cc.) contains 25 Gm. tar, 12.5 Gm. potassium hydroxide. Antiparasitic Dermic.

SOLUTION, THOMPSON'S. See Solution Phosphorus.

Solution Tolu for Syrup. See Fluid Tolu.

SOLUTION, VILLATE'S. See Mixture Astringent.

SOLUTION ZINC AND ALUMINUM COMPOUND.

Liquor Zinci et Alumini Compositus, N. F. Each 1000 mls (Cc.) contains 200 Gm. zinc sulphate, 200 Gm. aluminum sulphate, 0.6 Gm. betanaphthol, 2 mls oil thyme. Astringent, Antiseptic; externally.

SOLUTION ZINC AND IRON COMPOUND.

Liquor Zinci et Ferri Compositus, N. F.; Deodorant Solution. Each 1000 mls (Cc.) contains 200 Gm. zinc sulphate, 200 Gm. ferrous sulphate, 65 Gm. copper sulphate, 0.6 Gm. betanaphthol, 2 mls oil thyme, 4 mls hypophosphorous acid.

⊕ **Solution Zinc Chloride, Squibb** bottle, lb.

Liquor Zinci Chloridi. 50 percent. anhydrous zinc chloride. Disinfectant, diluted, about 1 lb. in 2 gallons water; Caustic, in concentrated form.

Solutions, Test and Volumetric. See Reagents (Part IV).

Spanish Flies. See Cantharides.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Sparteine Sulphate, Squibb 1/8-oz. vial, ; 15-gr. vial,
Sparteinae Sulphas. $C_{15}H_{26}N_2H_2SO_4 \cdot 5H_2O$. Salt of alkaloid from *Scoparius* (Broom). Colorless, odorless, crystals, or a white powder; saline, slightly bitter taste. 1 Gm. dissolves in 1.1 mls (Cc.) water, 3 alcohol; insoluble in ether or chloroform. Used as Heart Stimulant and Diuretic. **Average Dose:** 1/6 grain (0.01 Gm.); though as much as 2 grains has been recommended per dose, particularly for diuretic action. **Antidotes:** tannin, then emetics; cathartics; strong hot coffee; opium; brandy. (See also Tablets [Part II].)

SPEARMINT.

Mentha Viridis. Dried leaves and flowering tops of *Mentha spicata* (*Mentha viridis*; Fam. *Labiatae*). Carminative Flavoring. **Average Dose:** 60 grains (4 Gm.).

SPECIES, LAXATIVE.

Species Laxativæ, N. F.; St. Germain Tea. Senna 40%, elder flowers 25%, fennel 12.5%, anise 12.5%, potassium bitartrate 10%. **Average Dose:** 20 grains (1.3 Gm.) in infusion.

SPECIES, PECTORAL.

Species Pectorales, N. F.; Breast Tea. Althæa 40%, colts-foot 20%, licorice 15%, anise 10%, mullein flowers 10%, orris 5%. **Average Dose:** 60 grains (4 Gm.) in infusion.

Specific Gravity Apparatus, Squibb

Consisting of a tested hydrometer, thermometer, and red and blue litmus paper. Complete, ; without thermometer, ; hydrometer alone, ; jar alone,

SPERMACETI.

Cetaceum. Conerete fat from head of sperm whale, *Physeter macrocephalus* (Fam. *Physeteridæ*). White, unctuous masses; faint odor; bland, mild taste. Sp. gr. 0.938 to 0.944. Soluble in ether, chloroform, oils; nearly insoluble in alcohol (cold); insoluble in water. Skin Protective and Emollient, but used mainly pharmaceutically.

Spices.

In response to the requests of physicians for powdered spices of unquestionable identity and purity, E. R. Squibb & Sons have for some years past supplied a line of *absolutely pure, highest quality* powdered spices, which are commended to all who desire condiments of distinctive quality and free from sophistication of any kind. The whole spices are selected with the greatest care and first assayed to make sure they come up to the high standards set by the Squibb Laboratories. Being absolutely pure and of exceptional strength, the Squibb spices are economical; a small quantity goes a great way. The list comprises: Allspice; Cinnamon; Cloves; Ginger; Mace; Mustard; Nutmeg; Paprika; and Pepper (Black, Red Special Blend, and White). See respective titles.

SPIGELIA.

Spigelia; Pinkroot. Dried rhizome and roots of *Spigelia marilandica* (Fam. *Loganiaceæ*). Aromatic odor; pungent, bitter taste. Teniafuge. **Average Dose:** 60 grains (4 Gm.).

SPIKENARD. See *Aralia*.

SPINDLE TREE: See *Euonymus*.

SPIRIT ACID FORMIC.

Spiritus Acidi Formici, N. F.; Spirit of Ants. 1000 mls (Cc.) contain 40 mls formic acid (25%), 735 alcohol, and water. Rubefacient externally; rarely used internally as diffusible Stimulant. **Average Dose:** 1 fluidrachm (4 mls).

SPIRIT AMMONIA ANISATED.

Spiritus Ammoniae Anisatus, N. F. 3 vol. percent. anethol, 20 ammonia water, alcohol q. s. Aromatic Carminative, Expectorant. **Average Dose:** 15 minims (1 mil [Cc.]).

⊕ Spirit Ammonia Aromatic, Squibb

g. s. bottle, pint ; ¼ pint

Spiritus Ammoniae Aromaticus. 100 mls (Cc.) contain 3.4 Gm. ammonium carbonate and 9 mls ammonia water, with oils of lemon, nutmeg and lavender, alcohol and water. Sp. gr. about 0.900. Stimulant, Aromatic Alkali, Carminative. **Average Dose:** 30 minims (2 mls), diluted.

SPIRIT ANISE.

Spiritus Anisi. 10 volume percent. oil anise, in alcohol. Aromatic Carminative; Flavoring. **Average Dose:** 30 minims (2 mls [Cc.]).

SPIRIT ANTS. See Spirit Acid Formic.

SPIRIT BAY COMPOUND. See Spirit Myrcia Compound.

SPIRIT BITTER ALMOND.

Spiritus Amygdalæ Amaræ. 1 volume percent. true oil bitter almond, in alcohol (80) and water (19). Cough Sedative; Flavoring. **Average Dose:** 8 minims (0.5 mil [Cc.]).

⊕ SPIRIT CAMPHOR.

Spiritus Camphoræ; Tincture Camphor. 100 mls (Cc.) contain 10 Gm. camphor, in alcohol. Rubefacient; Antispasmodic, Stimulant. **Average Dose:** 15 minims (1 mil), diluted.

SPIRIT CARDAMOM COMPOUND.

Spiritus Cardamomi Compositus, N. F. 10 vol. percent. oil cardamom, 10 oil orange, 1 oil cinnamon, 0.5 oil clove, 0.5 anethol, 0.02 oil caraway, in alcohol. Carminative; Flavoring.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

⊕ SPIRIT CHLOROFORM.

Spiritus Chloroformi; Chloric Ether. 6 volume percent. chloroform, in alcohol. Counter-irritant, Anodyne; Antispasmodic. Carminative. Average Dose: 30 minims (2 mls [Cc.]), diluted.

SPIRIT CINNAMON.

Spiritus Cinnamomi. 10 volume percent. oil cinnamon, in alcohol. Aromatic Carminative. Average Dose: 30 minims (2 mls [Cc.]).

⊕ SPIRIT ETHER.

Spiritus Ætheris; often erroneously designated as Hoffmann's Anodyne. 32½ volume percent. ether, in alcohol. Carminative, Antispasmodic, Stimulant. Average Dose: 1 fluidrachm (4 mls [Cc.]).

Spirit Ether Compound, Squibb bottle, pint ; ¼ pint

Spiritus Ætheris Compositus Hoffman's Anodyne. 2.5 volume percent. genuine ethereal oil. Each 100 mls (Cc.) contains 2.5 mls (Cc.) ethereal oil, 32.5 mls ether, and alcohol. The ethereal oil used is a product made in strict accordance with N. F. directions; not the nondescript distillate from grapes, nor the indeterminate residue from the ether still often marketed as "oil of wine." Stimulant Antispasmodic. Carminative. Average Dose: 1 fluidrachm (4 mls [Cc.]), diluted.

⊕ Spirit Ether Nitrous, Squibb

bottle, pint, ; ¼ pint,

Spiritus Ætheris Nitrosi; Sweet Spirit Nitre. Prepared at frequent intervals, to insure reliability in strength. A special laboratory process affords a product better than that produced by method described in U. S. P. It is more uniform in constitution, and the therapeutic results from its use are more generally satisfactory. Assays about 4 percent. ethyl nitrite. Volatile, inflammable, clear liquid; pungent odor; sharp, burning taste. Sp. gr. about 0.823. Mild Diuretic, Diaphoretic. Average Dose: 30 minims (2 mls [Cc.]). Incompatible with antipyrine, acetanilid, acetphenetidin, fluidextract buchu, morphine salts, and iodides (when it is acid). Should be kept in dark-amber bottles, in cool place remote from lights and fire.

SPIRIT GLONIN. See Spirit Glyceryl Trinitrate.

⊕ SPIRIT GLYCERYL TRINITRATE.

Spiritus Glycerilis Nitratis; Spirit Glonoin; Solution Nitroglycerin. Alcoholic solution containing 1 percent. $C_3H_5(NO_3)_3$. Vaso-dilator; slower than amyl nitrite. Average Dose: 1 minim (0.06 mil [Cc.]). Antidotes: atropine; extract ergot; strychnine; stimulants. NOTES: Great care must be exercised in handling and storing this spirit; dangerous explosion may result if any considerable quantity is spilled and the alcohol lost by evaporation. If spilled, pour solution potassium hydroxide over it at once. (See also Tablets Nitroglycerin [Part II].)

Spirit Hartshorn. See Ammonia Water.

SPIRIT JUNIPER.

Spiritus Juniperi. 5 volume percent. oil juniper, in alcohol. Diuretic. Average Dose: $2\frac{1}{2}$ fluidrachms (10 mls [Cc.]).

SPIRIT JUNIPER COMPOUND.

Spiritus Juniperi Compositus. 0.4 vol. percent. oil juniper, and 0.05 each oils fennel and caraway, in alcohol and water. Diuretic. Average Dose: $2\frac{1}{2}$ fluidrachms (10 mls [Cc.]).

SPIRIT LAVENDER.

Spiritus Lavandulæ. 5 volume percent. oil lavender flowers, in alcohol. Aromatic; Carminative. Flavoring. Average Dose: 30 minims (2 mls [Cc.]).

Spirit Lavender Compound. See Tincture Lavender Compound.

SPIRIT MINDERERUS. See Solution Ammonium Acetate.

SPIRIT MUSTARD.

Spiritus Sinapis, N. F. 2 vol. percent. volatile oil mustard, in alcohol. Counter-irritant.

SPIRIT MYRCIA COMPOUND.

Spiritus Myrciæ Compositus, N. F.; Bay Rum. Each 1000 mls (Cc.) contains 8 mls oil bay, 0.5 oil orange, 0.5 oil pimenta, 610 alcohol, water q. s. Refreshing Ablution.

Spirit Nitre, Sweet, or Spirit Nitrous Ether. See Spirit Ether Nitrous.

SPIRIT NITROGLYCERIN. See Spirit Glyceryl Trinitrate.

Spirit Orange Compound, Squibb

bottle, pint ; $\frac{1}{4}$ pint

Spiritus Aurantii Compositus. 20, 5, 2, and 0.5 vol. percent. respectively of oils orange peel, lemon, coriander and anise, in alcohol. Flavoring.

⊕ **Spirit Peppermint, Squibb** bottle, pint, ; $\frac{1}{4}$ pint,

Spiritus Menthæ Piperitæ; Essence Peppermint. From bruised peppermint leaves and oil peppermint (10 percent. by volume). Aromatic Carminative. Average Dose: 30 minims (2 mls [Cc.]), well diluted or on sugar.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

SPIRIT, PERFUMED.

Spiritus Odoratus, N. F.; Cologne. Each 1000 mls (Cc.) contains 15 mls oil bergamot, 8 oil lemon, 7 oil rosemary, 4 oil lavender, 4 oil orange flowers, 2 acetic ether, water 120, alcohol q. s. Refreshing, fragrant ablution.

SPIRIT SPEARMINT.

Spiritus Menthe Viridis; Essence of Spearmint. From bruised leaves and oil spearmint (10 vol. percent.), with alcohol. Aromatic Carminative; Flavoring. Average Dose: 30 minims (2 mls [Cc.]).

SPIRIT TURPENTINE. See Oil Turpentine.

SPIRIT VANILLIN COMPOUND.

Spiritus Vanillini Compositus, N. F. Each 100 mls (Cc.) contains 20 Gm. vanillin, 5 mls oil orange, 1 oil cardamom, 0.5 oil cinnamon, in alcohol. Flavoring.

SPRAY AROMATIC OIL.

Nebula Aromatica, N. F. 100 mls (Cc.) contain 0.2 Gm. carbolic acid, 0.2 Gm. menthol, 0.1 Gm. thymol, 0.3 camphor, 0.3 Gm. benzoic acid, 0.2 mil eucalyptol, 0.2 mil oil cinnamon, 0.2 oil clove, 0.5 mil methyl salicylate, liquid petrolatum q. s.

SPRAY EUCALYPTOL.

Nebula Eucalyptolis, N. F. 5 vol. percent. eucalyptol in liquid petrolatum. Antiseptic and Deodorant spray for chronic inflammations of respiratory musosæ.

SPRAY MENTHOL.

Nebula Mentholis, N. F. 100 mls (Cc.) contain 2 Gm. menthol, in liquid petrolatum. Nasal spray.

SPRAY MENTHOL COMPOUND.

Nebula Mentholis Composita, N. F. 100 mls (Cc.) contain 1 Gm. menthol, 1 Gm. camphor, 0.5 mil methyl salicylate, 0.2 mil eucalyptol, 0.2 mil oil cinnamon, in liquid petrolatum. Aromatic, Antiseptic throat spray.

SPRAY THYMOL.

Nebula Thymolis, N. F. 100 mls (Cc.) contain 1 Gm. thymol, in liquid petrolatum. Antiseptic throat spray.

SPURRED RYE. See Ergot.

SQUAW ROOT. See Caulophyllum.

Squibb's Diarrhea Mixture. See Tincture Opium Compound.

⊕ Squill, Squibb

Ground for Percolation

bottle, lb.

Scilla. Fleshy, inner scales of bulb of *Urginea maritima* (Fam. *Liliaceæ*), cut into thin slices and carefully dried, the central portions being rejected. Physiologically assayed by U. S. P. method. Expectorant, Emetic, Nauseant. Average Dose: 1 1/2 grains (0.1 Gm.). (See also Fluidextract; Syrup; Vinegar.)

Stannous Chloride Reagent. See Reagents (Part IV).

STAPHISAGRIA.

Staphisagria; Stavesacre Seed. Ripe seed of *Delphinium Staphisagria* (Fam. *Ranunculaceæ*). Odor slight; taste intensely bitter, acrid. Antiparasitic Dermic, Alterative. Average Dose: 1 grain (0.065 Gm.). Antidotes: tannin, then emetics; chloral hydrate; chloroform by inhalation; ammonia or digitalis.

STAR GRASS. See Aletris.

⊕ Starch, Corn, Squibb

tin, lb.

Amylum. Starch separated from grain of *Zea Mays* (Fam. *Gramineæ*). Dusting-powder, Diluent.

STAVESACRE. See Staphisagria.

Sterile Ergot, Squibb

box of 6x1 Cc. ampuls

box of 12x1 Cc. ampuls

A sterile, non-alcoholic, physiologically tested and standardized preparation of best Spanish ergot, intended for hypodermic or intramuscular use in uterine inertia, metrorrhagia, post-partum hemorrhage, collapse, etc. Each mil (Cc.) represents 2 Gm. ergot.

STILLINGIA.

Stillingia; Queen's Root; Silver Leaf. Dried roots of *Stillingia sylvatica* (Fam. *Euphorbiaceæ*). Odor distinct; taste bitter, acrid and pungent. Used as Alterative, Expectorant, Sialogogue. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

STOKES' EXPECTORANT. See Mixture, Pectoral, Stokes.

STOKES' ST. JOHN LONG'S LINIMENT. See Liniment Turpentine, Acetic.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

STORAX.

Styrax; Liquid Storax. Balsam from wood and inner bark of *Liquidambar orientalis* (Fam. *Hamamelidaceæ*). Semiliquid, grayish, sticky, opaque mass; agreeable odor; balsamic, acrid taste. Soluble in equal weight warm alcohol; almost completely soluble in ether; insoluble in water. Antiparasitic, Demic, Expectorant. Average Dose: 15 grains (1 Gm.).

⊕ STRAMONIUM.

Stramonium; Thornapple Leaves; Jamestown, or Jimson, Weed. Dried leaves of *Datura Stramonium* or of *D. Tatula* (Fam. *Solanaceæ*), assaying not less than 0.25 percent. alkaloids. Odor heavy, narcotic; taste nauseous. Nerve Sedative, Antispasmodic, Anodyne. Average Dose: 1 grain (0.065 Gm.). Antidotes: tannin; apomorphine hypodermically; morphine; ammonia by inhalation. See also Extract; Fluidextract; Tincture.)

Strontium Acetate, Squibb

bottle, lb. ; ¼ lb. ; oz.

$\text{Sr}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot \frac{1}{2}\text{H}_2\text{O}$. White, crystalline powder. Soluble in water. Anthelmintic; also Reagent. Dose: 40 grains (2.6 Gm.), in water and glycerin, twice daily for five days.

Strontium Arsenite, Squibb

bottle, oz.

$\text{Sr}(\text{AsO}_2)_2 \cdot 4\text{H}_2\text{O}$. White powder. Soluble difficultly in water. Alterative, Antiperiodic; in chronic skin diseases, malaria, etc. Dose: $\frac{1}{30}$ to $\frac{1}{15}$ grain (0.002 to 0.004 Gm.), thrice daily. Antidotes: arsenic antidote or magnesia and milk; emetics; stimulants.

Strontium Bromide, Squibb

(Crystals) bottle, lb. ; ¼ lb. ; oz.

Strontii Bromidum. $\text{SrBr}_2 \cdot 6\text{H}_2\text{O}$. Free from barium. Colorless, odorless, bitter-saline crystals. 1 Gm. dissolves in 0.35 mil (Cc.) water; soluble in alcohol; insoluble in ether. Nerve Sedative, similar to sodium bromide; also Reagent. Average Dose: 15 grains (1 Gm.). Incompatible in solution with mineral acids, alkaloidal salts, and salts of heavy metals.

STRONTIUM CARBONATE.

Strontii Carbonas, N. F. SrCO_3 . White, odorless, tasteless powder, insoluble in ordinary solvents. Used technically.

Strontium Iodide, Squibb g. s. bottle, ¼ lb. ; oz.

Strontii Iodidum. $\text{SrI}_2 \cdot 6\text{H}_2\text{O}$. Almost colorless, odorless, bitter-saline, deliquescent, hexagonal plates, darkening on exposure. 1 Gm. dissolves in 0.2 mil (Cc.) water; soluble in alcohol, slightly soluble in ether. A deeply colored article should not be dispensed. Alterative, like potassium iodide; Expectorant. Average Dose: 5 grains (0.3 Gm.). Incompatible in solution with alkaloidal salts, chloral hydrate, mineral acids, alkalies and metallic salts generally.

Strontium Lactate, Squibb bottle, $\frac{1}{4}$ lb. ; oz.

White, granular powder; slightly bitter taste. Soluble in 4 parts water; in alcohol. Used as Alternative, Vermicide, Anticatarhal; in rheumatism, chorea, worms, nephritis, etc. **Dose:** 5 to 15 grains (0.3 to 1 Gm.); vermicide, 30 grains (2 Gm.) twice daily for 5 days.

Strontium Salicylate, Squibb bottle, lb. ; $\frac{1}{4}$ lb. ; oz.

Strontii Salicylas. $\text{Sr}(\text{C}_7\text{H}_5\text{O}_3)_2 \cdot 2\text{H}_2\text{O}$. White, crystalline, odorless, powder; sweetish, saline taste. 1 Gm. dissolves in 19 mls (Cc.) water, 61 alcohol. Antirheumatic, Intestinal Antiseptic. **Average Dose:** 15 grains (1 Gm.). Incompatible in solution with ferric salts, mineral acids, quinine salts, silver nitrate and lead acetate.

⊕ **Strophanthin, Squibb** 5-grain vial

Strophanthinum. Glucoside (or mixture of glucosides) from *Strophanthus*. Exceedingly powerful and poisonous, hence great caution should be used in handling it. White or faintly yellowish, crystalline, intensely bitter powder. Soluble freely in water or diluted alcohol; nearly insoluble in chloroform or ether. Heart Stimulant, like digitalis, but acts more rapidly and is excreted sooner; hence preferred in emergencies, used hypodermically. Absorption from alimentary canal variable, hence oral use inadvisable. **Average Dose:** by mouth, $\frac{1}{60}$ grain (0.001 Gm.); intravenously, $\frac{1}{80}$ grain (0.00075 Gm.). **Antidotes:** emetics; atropine or pilocarpine subcutaneously; picrotoxin; camphor or brandy as stimulants.

STROPHANTHIN CRYSTALLIZED OR G-STROPHANTHIN. See Ouabain.

⊕ STROPHANTHUS.

Strophanthus. Dried ripe seeds of *Strophanthus Kombe* or of *S. hispidus* (Fam. *Apocynaceæ*), deprived of their long awns. Action same as that of strophanthin. Odor slight, taste very bitter. **Average Dose:** 1 grain (0.065 Gm.). (See also Tincture.)

⊕ **Strychnine, Squibb**

* Crystals	bottle, oz.	; $\frac{1}{8}$ -oz. vial
Powdered	bottle, oz.	; $\frac{1}{8}$ -oz. vial

Strychnina. $\text{C}_{21}\text{H}_{22}\text{O}_2\text{N}_2$. Alkaloid from *Nux Vomica*. Colorless, transparent, odorless, intensely bitter crystals, or white powder. 1 Gm. dissolves in 6420 mls (Cc.) water, 136 alcohol, 5 chloroform; very slightly in ether. Bitter Tonic; Nerve, Respiratory and Cardiac Stimulant. **Average Dose:** $\frac{1}{40}$ grain (0.0015 Gm.), in pills or tablets. **Antidotes:** tannin, then emetics; chloral hydrate and bromides per rectum; chloroform by inhalation if required.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

Strychnine Arsenate, Squibb 1/8-oz. vial

$C_{21}H_{22}O_2N_2.H_3AsO_4.1/2H_2O$. White, very bitter needles or powder. Soluble in about 70 parts water. Used as Alternative and Nerve Stimulant; in tuberculosis, skin diseases, obstinate malaria, nervous debility, etc. **Dose:** $1/60$ to $1/15$ grain (0.001 to 0.004 Gm.); hypodermically, 3 to 10 minims (0.2 to 0.6 mil [Cc.]) of $1/2$ percent. suspension in liquid petrolatum once daily.

Strychnine Arsenite, Squibb 1/8-oz. vial

$C_{21}H_{22}O_2N_2.HAsO_2$. White powder. Sparingly soluble in water. Action and dose: as of preceding.

Strychnine Glycerophosphate, Squibb

bottle, oz. ; 1/8-oz. vial

Strychninae Glycerophosphas, N. F. White, very bitter powder. 1 Gm. dissolves in 350 mils (Cc.) water, 310 alcohol; slightly soluble in ether or chloroform. **Average Dose:** $1/40$ grain (0.0015 Gm.).

Strychnine Hydrobromide, Squibb 1/8-oz. vial

$C_{21}H_{22}O_2N_2.HBr$. Small, white needles. Soluble in alcohol, about 55 parts water. Used chiefly in chronic alcoholism, insomnia from overwork, etc.

Strychnine Hydrochloride, Squibb 1/8-oz. vial

$C_{21}H_{22}O_2N_2.HCl.2H_2O$. White efflorescent needles. Soluble in about 50 parts water.

⊕ **Strychnine Nitrate, Squibb** 1/8-oz. vial

Strychninae Nitras. $C_{21}H_{22}O_2N_2.HNO_3$. Colorless, glistening, odorless, intensely bitter needles; or white powder. 1 Gm. dissolves in 42 mils (Cc.) water, 150 alcohol, 50 glycerin, 105 chloroform; insoluble in ether. Used chiefly in dipsomania hypodermically. Incompatibles of strychnine salts in general: alkalies, alkali carbonates, iodides, bromides, arsenates, arsenites, etc. (See also Tablets [Part II].)

Strychnine Phosphate, Squibb 1/8-oz. vial

$(C_{21}H_{22}O_2N_2)_2.H_3PO_4.9H_2O$. White powder or shining needles. Soluble slightly in water.

⊕ **Strychnine Sulphate, Squibb**

Crystals or *Powdered bottle, oz. ; 1/8-oz. vial

Strychninae Sulphas. $(C_{21}H_{22}O_2N_2)_2.H_2SO_4.5H_2O$. Colorless or white, odorless, intensely bitter, efflorescent crystals or powder. 1 Gm. dissolves in 32 mils (Cc.) water, 81 alcohol, 220 chloroform; freely soluble in glycerin; insoluble in ether. Action, dose and antidotes: as of strychnine alkaloid. (See also Tablets [Part II].)

STRYCHNINE VALERATE.

Strychninæ Valeras, N. F. White powder; odor of valerian; intensely bitter taste. Sparingly soluble in water, ether; soluble in alcohol, chloroform. Average Dose: $\frac{1}{40}$ grain (0.0015 Gm.).

†STYPTICIN. Brand of Cotarnine Hydrochloride.

†STYPTOL.

Cotarnine Phthalate Neutral. Yellow, bitter powder. Soluble freely in water or alcohol. Action and dose: as of cotarnine hydrochloride.

SUET BENZOINATED.

Sevum Benzoinatum, N. F. Prepared suet carrying 3 percent. benzoin. Ointment Base.

SUET PREPARED.

Sevum Præparatum. Internal fat of abdomen of sheep, purified by melting and straining. White, nearly odorless, solid fat; bland taste when fresh, becoming rancid on exposure. 1 Gm. dissolves in about 60 Gm. ether, 2 benzin; insoluble in water, cold, alcohol. Used in preparation of ointments and cerates.

⊕ SUGAR.

Saccharum; Sucrose. $C_{12}H_{22}O_{11}$. From cultivated varieties of *Saccharum officinarum* (Fam. Gramineæ), from *Beta vulgaris* (Fam. Chenopodiaceæ), etc. 1 Gm. dissolves in 0.5 mil (Cc.) water, 170 alcohol; insoluble in chloroform, ether.

Sugar of Lead. See Lead Acetate.

⊕ Sugar of Milk, Squibb tin, lb. ; $\frac{1}{4}$ lb.

Saccharum Lactis; Lactose. $C_{12}H_{22}O_{11} \cdot H_2O$. Impalpable powder, having been bolted through a No. 120 silk bolting cloth. Unless properly purified, milk sugar contains small percentages of other constituents of milk. The article here listed is distinguishable from other grades in being free from traces of casein and butter-fat that cause fermentation when the article is used to modify milk; also perfectly free from cane sugar, starch and other impurities. Hence of excellent purity, and especially adapted for use in milk modification and for compounding powders, etc. As Milk Sugar readily absorbs odors, and in consequence becomes contaminated, this firm supplies it only in tins, not in pasteboard boxes. It should be kept tightly closed and remote from odorous substances. White, odorless powder; less sweet than cane sugar, less liable to ferment. 1 Gm. dissolves in 4.9 mils water; almost insoluble in alcohol; insoluble in ether or chloroform. Nutritive, Diuretic; largely used to modify cow's milk in feeding of infants. Dose (diuretic): 3 or 4 ounces per day.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

SULPHONAL. Brand of Sulphonmethane.

- ⊕ **Sulphonethylmethane, Squibb** bottle, oz.
Sulphonethylmethanum; Diethylsulphonemethylethylmethane;
 Trional. $C_8H_{18}S_2O_4$. Colorless, odorless, bitter scales. 1 Gm.
 dissolves in 200 mils (Cc.) water; readily in alcohol or ether.
 Triturated with chloral hydrate, it yields a liquid or soft mass.
 Hypnotic, Nerve Sedative. **Average Dose:** 12 grains (0.75
 Gm.), in hot water or tea. (See also Tablets [Part II].)

- ⊕ **Sulphonmethane, Squibb** bottle, oz.
Sulphonmethanum; Diethylsulphonemethylmethane; Sulphonal.
 $C_7H_{16}S_2O_4$. Colorless, odorless, almost tasteless crystals; or
 white, crystalline powder. 1 Gm. dissolves in 365 mils (Cc.)
 water, 60 alcohol, 11 chloroform, 64 ether. Hypnotic, Nerve
 Sedative. **Average Dose:** 12 grains (0.75 Gm.), in hot water or
 tea. (See also Tablets [Part II].)

- ⊕ **Sulphur Precipitated, Squibb** carton, lb. ; ¼ lb.
Sulphur Precipitatum; Lac Sulphuris; Milk of Sulphur. S.
 Much of the precipitated sulphur of the market contains cal-
 cium sulphate due to use of *sulphuric* acid in the precipitation.
 The product here quoted is precipitated from lime solution by
 hydrochloric acid and the soluble calcium chloride thoroughly
 washed out. It will be found free from either acid or alkali.
 Fine, pale-yellow, odorless, tasteless powder. Soluble in car-
 bon disulphide, benzin, oil turpentine and many other oils;
 also in ether or chloroform. Mild Cathartic; Antipar-
 asitic Dermic. **Average Dose:** 60 grains (4 Gm.).

- ⊕ **Sulphur Sublimed, Squibb** carton, lb.,
Sulphur Sublimatum; Flowers of Sulphur. S. Fine-yellow
 powder; slight odor; faintly acid taste. Soluble same as
 precipitated sulphur. Used chiefly as Dermic, rarely as Laxa-
 tive. **Average Dose:** 60 grains (4 Gm.).

- ⊕ **Sulphur Washed, Squibb** carton, lb.
Sulphur Lotum. S. Thoroughly washed with ammonia water
 and finally with water. Action and dose: as of preceding.
 (See also Reagents [Part IV].)

SULPHUR IODIDE.

Sulphuris Iodidum, N. F. Fused combination of washed sul-
 phur 20 percent. and iodine 80 percent. Grayish-black,
 brittle masses; iodine odor; acrid taste. Almost insoluble in
 water; soluble in about 60 parts glycerin; partially soluble in
 alcohol or ether. Obsolescent Antiparasitic Dermic.

SUMACH. See *Rhus Glabra*.

SUMBUL.

Sumbul; Musk-root. Dried rhizome and roots of *Ferula Sumbul* (Fam. *Umbelliferae*). Odor strong, musk-like; taste bitter. Used as Nerve Stimulant and Antispasmodic; in hysterical conditions. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

SUN CHOLERA MIXTURE. See Mixture Opium and Rhubarb Compound.

SUPPOSITORIES BOROLYCEIN.

Suppositoria Boroglycerini, N. F. 1.25 Gm. glycerite boroglycerin, 1.25 Gm. glycerin, 1.67 Gm. glycerinated gelatin. Antiseptic.

⊕ **Suppositories Glycerin, Squibb**

bottles of 6, in boxes of 6 bottles, per doz. bottles
bottles of 12, in boxes of 6 bottles, per doz. bottles

Suppositoria Glycerini. Moulded rectal suppositories made with stearic acid and a little sodium carbonate monohydrated. Each contains 3 grammes (46 grains) glycerin; cone-shape. Laxative in action.

Suppositories Glycerin, Infants' Long, Squibb

bottles of 6, per doz. bottles
bottles of 12, per doz. bottles

Each contains 26¼ grains pure glycerin; special size for infants.

SUPRARENALS DRIED.

Suprarenalum Siccum. Suprarenal glands of the sheep (*Ovis aries*) or ox (*Bos taurus*) freed from fat, cleaned, dried, and powdered. Contains about 0.5 percent. epinephrine. Light yellowish-brown powder, of slight odor; partially soluble in water; 1 part equals about 6 parts fresh gland. Alterative, Vaso-constrictor; in Addison's disease, diabetes insipidus, Basedow's disease, recurrent hemorrhages, etc. Average Dose: grains (0.25 Gm.).

SYDENHAM'S LAUDANUM. See Tincture Opium with Saffron.

SYKOSE. Brand of Benzozulphinide (Saccharin).

⊕ **SYRUP (SIMPLE).**

Syrupus; Syrup. Aqueous solution of sugar, containing 85 Gm. of latter in each 100 mls (Cc.). Sp. gr. 1.313. Used pharmaceutically.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

SYRUP ACACIA.

Syrupus Acaciæ; *Syrupus Gummosus*; Syrup Gum. 10 per cent. acacia. Best prepared extemporaneously in small quantities at a time, and kept well stoppered, in cool place. Vehicle Demulcent.

SYRUP ACID CITRIC.

Syrupus Acidi Citrici; Syrup Lemon. 100 mls (Cc.) contain 1 Gm. citric acid in syrup flavored with tincture fresh lemon peel. Flavoring ingredient. Does not keep well.

Syrup Acid Hydriodic, Squibb pint,

Essentially official *Syrupus Acidi Hydriodici*. Contains 12.5 vol. percent. diluted hydriodic acid, or 1.3 to 1.45 Gm. HI in 100 mls (Cc.), but made according to an improved formula which yields a more stable product than U. S. P. process. Alterative; chiefly in chronic bronchitis, scrofula, rheumatic conditions, etc. **Average Dose:** 1 fluidrachm (4 mls). Keep in cool place, protected from sunlight, lest discoloration and odor develop.

SYRUP ALTHÆA.

Syrupus Althææ, N. F. Each 100 mls (Cc.) represents 5 Gm. althæa, 3 mls alcohol, 10 glycerin, with sugar and water. Demulcent Vehicle. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Syrup Ammonium Hypophosphite, Squibb

Syrupus Ammonii Hypophosphitis, N. F. Each fluidounce contains $16\frac{1}{4}$ grains ammonium hypophosphite, with glycerin, compound spirit vanillin, syrup and water. Used as Expectorant and Alterative. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Syrup Asarum Compound, Squibb pint

Syrupus Asari Compositus, N. F.; Compound Syrup Canada Snake-root. Each fluidounce represents $28\frac{1}{4}$ grains asarum and $1\frac{1}{2}$ grains ipecac. Aromatic, Stomachic. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

SYRUP BLACKBERRY FRUIT.

Syrupus Rubi Fructus, N. F. From fresh, ripe blackberries. Flavoring.

Syrup Bromides, Squibb pint

Syrupus Bromidorum, N. F. Each fluidounce contains about $37\frac{1}{2}$ grains potassium bromide, $37\frac{1}{2}$ grains sodium bromide, $22\frac{1}{2}$ grains ammonium bromide, $11\frac{1}{2}$ grains calcium bromide, and 4 grains lithium bromide. Nerve Sedative. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

SYRUP BUCKTHORN BERRIES. See Syrup *Rhamnus Cathartica*.

SYRUP CALCIUM HYDROCHLOROPHOSPHATE.

Syrupus Calcii Hydrochlorophosphatis, N. F. Each fluidounce contains about $8\frac{1}{4}$ grains calcium phosphate rendered soluble by hydrochloric acid, with tincture lemon peel, syrup and water. Used as Anticachectic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP CALCIUM HYPOPHOSPHITE.

Syrupus Calcii Hypophosphitis, N. F. Each fluidounce represents 16 grains calcium hypophosphite. Used as Alterative Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP CALCIUM IODIDE.

Syrupus Calcii Iodidi, N. F. Each fluidrachm contains about 5 grains calcium iodide, prepared from freshly made iron iodide and precipitated calcium carbonate. Used as Alterative, Antisyphilitic, Anticatarrhal. **Average Dose:** 30 minims (2 mils [Cc.]).

Syrup Calcium Lactophosphate, Squibb pint

Syrupus Calcii Lactophosphatis. Prepared from pure precipitated calcium carbonate, lactic acid and phosphoric acid, with orange-flower water for flavor. Each fluidounce represents 4 grains calcium lactophosphate. Bone Nutrient, Anticachectic. **Average Dose:** $2\frac{1}{2}$ fluidrachms (10 mils [Cc.]).

SYRUP CALCIUM LACTOPHOSPHATE WITH IRON.

Syrupus Calcii Lactophosphatis et Ferri, N. F. Each fluidounce represents about 3 grains calcium lactophosphate and 4 grains iron lactate. Bone Nutrient, Anticachectic, Hematinic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP CALCIUM AND SODIUM HYPOPHOSPHITES.

Syrupus Calcii et Sodii Hypophosphitum, N. F. Each fluidounce contains about 16 grains each calcium and sodium hypophosphites. Used as Alterative Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP CANADA SNAKEROOT COMPOUND. See Syrup Asarum Compound.

SYRUP CIMICIFUGA COMPOUND.

Syrupus Cimicifugæ Compositus, N. F.; Compound Syrup Black Cohosh. Each fluidounce represents about 18 grains cimicifuga, 9 grains each licorice and senega, $4\frac{1}{2}$ grains ipecac and 18 grains wild cherry. Used as Expectorant Anticatarrhal. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

SYRUP CINNAMON.

Syrupus Cinnamomi, N. F. Each 100 mils (Cc.) represents 10 Gm. Saigon cinnamon, 5 mils alcohol, sugar and cinnamon water. Aromatic Carminative; chiefly Vehicle. Average Dose: 1 fluidrachm (4 mils [Cc.]).

SYRUP CODEINE.

Syrupus Codeinæ, N. F. Each fluidounce contains approximately 0.9 grain codeine sulphate. Cough Sedative. Analgesic, Antispasmodic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

SYRUP DOVER'S POWDER. See Syrup Ipecac and Opium.

SYRUP, EASTON'S. See Syrup Iron, Quinine and Strychnine Phosphates.

SYRUP ERIODICTYON AROMATIC.

Syrupus Eriodictyi Aromaticus, N. F.; Aromatic Syrup Yerba Santa; *Syrupus Corrigenis*. Containing fluidextract eriodictyon, solution potassium hydroxide, compound tincture cardamom, and oils sassafras, lemon and cloves. Expectorant, but used mainly as Vehicle for quinine and other bitter or acrid substances. Average Dose: 2 fluidrachms (8 mils [Cc.]).

SYRUP FIGS COMPOUND.

Syrupus Ficorum Compositus, N. F. Each 100 mils (Cc.) represents 30 Gm. figs and 20 mils fluidextract senna, 10 mils aromatic fluidglycerate cascara, with oil fennel and spirit peppermint as corrective and flavoring. Laxative. Average Dose: 1 fluidrachm (4 mils).

SYRUP GARLIC.

Syrupus Allii, N. F. Each 100 mils (Cc.) represents 20 Gm. garlic extracted with diluted acetic acid, with syrup. Stimulating Expectorant. Average Dose: 1 fluidrachm (4 mils).

SYRUP GINGER.

Syrupus Zingiberis. 3 volume percent. fluidextract ginger. Easily miscible with water. Aromatic Carminative; flavoring. Average Dose: 4 fluidrachms (15 mils [Cc.]).

SYRUP GLYCYRRHIZA.

Syrupus Glycyrrhizæ, N. F.; Syrup Licorice. Contains 25 vol. percent. fluidglycerate glycyrrhiza. Expectorant, Demulcent, Vehicle for bitter drugs. Average Dose: 2 fluidrachms (8 mils [Cc.]).

Syrup, Hive or Croup. See Syrup Squill Compound.

SYRUP HYDROCHLOROPHOSPHATES. See Syrup Phosphates with Quinine and Strychnine.

Syrup Hypophosphites, Squibb pint,

Syrupus Hypophosphitum. Each fluidounce contains about 20 grains calcium hypophosphite, and 7 grains each potassium and sodium hypophosphites, with 5 vol. percent. glycerin. Used as Alterative Tonic. **Average Dose:** $2\frac{1}{2}$ fluidrachms (10 mils [Cc.]).

Syrup Hypophosphites Compound, Clear, Squibb pint,

Syrupus Hypophosphitum Compositus, N. F. Dropped from U. S. P. Each fluidounce contains about 16 grains calcium hypophosphite, 8 grains each potassium and sodium hypophosphites, 1 grain each ferric and manganese hypophosphites, $\frac{1}{2}$ grain quinine alkaloid, and $\frac{1}{20}$ grain strychnine. Used as Alterative Tonic and Hematinic. **Average Dose:** 2 fluidrachms (8 mils [Cc.], after meals, with water.

Syrup Hypophosphites Compound, Cloudy, Squibb pint,

Same composition as preceding, but rendered cloudy.

SYRUP IODOTANNIN.

Syrupus Iodotannicus, N. F. Each fluidounce contains about $1\frac{1}{4}$ grains iodine, $2\frac{1}{2}$ grains tannic acid. Alterative, Resolvent. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

⊕ Syrup Ipecac, Squibb pint

Syrupus Ipecacuanhæ. Each fluidounce represents about 32 grains ipecac. **Average Dose:** expectorant, 15 minims (1 mil [Cc.]); emetic, 4 fluidrachms (15 mils).

† SYRUP IPECAC AND OPIUM.

Syrupus Ipecacuanhæ et Opii, N. F.; Syrup Dover's Powder. Each fluidounce represents 4 grains each opium and ipecac. Diaphoretic, Antispasmodic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP IRON HYPOPHOSPHITE.

Syrupus Ferri Hypophosphitis, N. F. Each fluidounce contains about $8\frac{1}{8}$ grains ferric hypophosphite, flavored with orange-flower water. Hematinic, Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

⊕ Syrup Iron Iodide, Squibb lb.

Syrupus Ferri Iodidi. About 5 percent. ferrous iodide (nearly 4 grains in each fluidrachm). Especially commended for its permanence and reliability. Yellowish-green color; sweet, strongly ferruginous taste. Alterative, Hematinic. **Average Dose:** 15 minims (1 mil [Cc.]), diluted. Incompatible with alkali carbonates, acid salts and vegetable astringents.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

SYRUP IRON LACTOPHOSPHATE.

Syrupus Ferri Lactophosphatis, N. F. Each fluidounce contains about 12 grains iron lactophosphate. Hematinic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

SYRUP IRON OXIDE SOLUBLE. See Syrup Iron Saccharated Soluble.

SYRUP IRON PROTOCHLORIDE.

Syrupus Ferri Protochloridi, N. F.; Syrup Ferrous Chloride. About 8 grains ferrous chloride per fluidounce. Hematinic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

Syrup Iron and Manganese Iodide, Squibb pint

Syrupus Ferri et Mangani Iodidi, N. F. Each fluidounce contains about 48 grains iodide iron and 18 grains iodide manganese. Alterative, Hematinic. Average Dose: 15 minims (1 mil [Cc.]).

SYRUP IRON, QUININE AND STRYCHNINE PHOSPHATES.

Syrupus Ferri, Quininae et Strychninae Phosphatum, N. F.; Easton's Syrup. Each fluidounce contains about 9 grains ferric phosphate, 12 grains quinine as phosphate, and $\frac{1}{11}$ strychnine. Bitter Tonic, Hematinic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

SYRUP IRON SACCHARATED SOLUBLE.

Syrupus Ferri Saccharati Solubilis, N. F.; Syrup Soluble Oxide Iron. Each fluidounce represents about 6 grains metallic iron, in form of saccharated oxide. Hematinic; mainly in anemic children. Average Dose: 1 fluidrachm (4 mils [Cc.]).

SYRUP, JACKSON'S PECTORAL. See Syrup Morphine and Acacia.

SYRUP KRAMERIA.

Syrupus Krameriaë, N. F.; Syrup Rhatany. 45 vol. percent. fluidextract krameria, with syrup. Antidiarrheal. Average Dose: 1 fluidrachm (4 mils [Cc.]).

SYRUP LACTUCARIUM.

Syrupus Lactucarii. 10 vol. percent. tincture lactucarium (1:2), 20 glycerin, 5 orange-flower water. Used as Cough Sedative. Average Dose: $2\frac{1}{2}$ fluidrachms (10 mils [Cc.]).

SYRUP LEMON. See Syrup Acid Citric.

SYRUP LICORICE. See Syrup Glycyrrhiza.

SYRUP MANNA.

Syrupus Mannæ, N. F. Each fluidounce represents 57 grains manna. Laxative. Average Dose: 2 fluidrachms (8 mils [Cc.]).

SYRUP MORPHINE AND ACACIA.

Syrupus Morphinae et Acaciae, N. F.; Pectoral Syrup; Jackson's Pectoral (or Cough) Syrup. Each fluidounce contains $\frac{1}{4}$ grain morphine hydrochloride, with mucilage acacia and oil sassafras. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Syrup Orange, Squibb pint

Syrupus Aurantii. 5 mils (Cc.) tincture sweet orange peel and 0.5 Gm. citric acid in 100 mils. Flavoring vehicle.

SYRUP ORANGE FLOWERS.

Syrupus Aurantii Florum. Sugar dissolved in orange-flower water. Flavoring vehicle.

SYRUP, PECTORAL. See Syrup Morphine and Acacia.**SYRUP PHOSPHATES COMPOUND.**

Syrupus Phosphatum Compositus, N. F.; Chemical Food. 50 vol. percent. solution phosphates compound with syrup and glycerin, colored red with tincture cudbear. Antiquated Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP PHOSPHATES WITH QUININE AND STRYCHNINE.

Syrupus Phosphatum cum Quinina et Strychnina, N. F.; Syrup Hydrochlorophosphates. Each 1000 mils (Cc.) contains 500 mils solution phosphates compound, 4.4 Gm. quinine hydrochloride, 0.14 Gm. strychnine nitrate, with glycerin and syrup. Used as General Tonic. **Average Dose:** 1 fluidrachm (4 mils).

SYRUP POPPY.

Syrupus Papaveris, N. F. Representing 10 Gm. poppy capsules in 100 mils (Cc.). Mild Opiate, Sedative. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP QUINIDINE.

Syrupus Quinidinae, N. F. Each fluidounce contains about 15 grains quinidine in syrup flavored with oil orange. Antiperiodic, Antipyretic, Bitter Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP RASPBERRY.

Syrupus Rubi Idæi, N. F. From fresh, ripe raspberries. Pleasant Vehicle.

SYRUP RHAMNUS CATHARTICA.

Syrupus Rhamni Catharticae, N. F.; Syrup Buckthorn Berries. 20 vol. percent. fluidextract buckthorn berries, with oils fennel and cinnamon as corrigents. Laxative. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

SYRUP RHUBARB.

Syrupus Rhei. Each fluidounce represents about 46 grains rhubarb, and 4.6 grains potassium carbonate, with syrup and spirit cinnamon. Laxative. Average Dose: $2\frac{1}{2}$ fluidrachms (10 mls [Cc.]).

⊕ **SYRUP RHUBARB AROMATIC.**

Syrupus Rhei Aromaticus. Each fluidounce contains 72 minims aromatic tincture rhubarb, representing about $13\frac{3}{4}$ grains rhubarb. Laxative. Average Dose: $2\frac{1}{2}$ fluidrachms (10 mls [Cc.]).

Syrup Rhubarb and Potassa Compound. See Mixture Rhubarb Alkaline.

SYRUP ROSE.

Syrupus Rosæ, N. F. $12\frac{1}{2}$ volume percent. fluidextract rose, with 1 volume percent. dilute sulphuric acid. Flavoring vehicle.

SYRUP RUBUS.

Syrupus Rubi, N. F.; Syrup Blackberry Bark. Each fluidounce represents about 114 grains blackberry bark. Intestinal Astringent. Average Dose: 1 fluidrachm (4 mls [Cc.]).

SYRUP SANGUINARIA.

Syrupus Sanguinariæ, N. F.; Syrup Bloodroot. Each fluidounce represents about $102\frac{1}{2}$ grains sanguinaria extracted with acetic menstruum. Expectorant. Average Dose: 30 minims (2 mls [Cc.]).

Syrup Sarsaparilla Compound, Squibb pint

Syrupus Sarsaparillæ Compositus. 20 volume percent. fluidextract sarsaparilla, $1\frac{1}{2}$ fluidextract licorice, $1\frac{1}{2}$ fluidextract senna, flavored with oil sassafras, oil anise, and methyl salicylate. Used chiefly as Vehicle for potassium iodide. Average Dose: 4 fluidrachms (15 mls [Cc.]).

SYRUP SENEGA.

Syrupus Senegæ. Each fluidounce represents about 91 grains senega. Expectorant. Average Dose: 1 fluidrachm (4 mls [Cc.]).

⊕ **Syrup Senna, Squibb** pint

Syrupus Sennæ. Each fluidounce represents 114 grains senna, with 2.4 minims oil coriander for flavor. Laxative. Average Dose: 1 fluidrachm (4 mls [Cc.]).

SYRUP SENNA AROMATIC.

Syrupus Sennæ Aromaticus, N. F. Each fluidounce represents 57 grains senna, 23 grains jalap, and $8\frac{1}{8}$ grains rhubarb, with aromatics. Laxative. Average Dose: 2 fluidrachms (8 mls [Cc.]).

SYRUP SENNA COMPOUND.

Syrupus Sennæ Compositus, N. F. Each fluidounce represents about $61\frac{1}{2}$ grains senna, $16\frac{1}{4}$ grains rhubarb and $16\frac{1}{4}$ grains frangula, with methyl salicylate, alcohol and syrup. Purgative. Average Dose: 2 fluidrachms (8 mils [Cc.]).

SYRUP SODIUM HYPOPHOSPHITE.

Syrupus Sodii Hypophosphitis, N. F. Each fluidounce contains about 16 grains sodium hypophosphite. Used as Alterative, Tonic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

⊕ **Syrup Squill, Squibb** pint

Syrupus Scillæ. Each fluidounce represents about $20\frac{1}{2}$ grains squill in the form of vinegar squill. Expectorant. Average Dose: 30 minims (2 mils [Cc.]).

Syrup Squill Compound, Squibb pint,

Syrupus Scillæ Compositus; Hive or Croup Syrup. Each fluidounce represents about $36\frac{1}{2}$ grains each squill and senega as fluidextract, and 0.9 grain antimony and potassium tartrate. Expectorant, children's Emetic. Average Dose: 30 minims (2 mils [Cc.])

SYRUP STILLINGIA COMPOUND.

Syrupus Stillingiæ Compositus, N. F. Each fluidounce represents $27\frac{1}{2}$ grains each stillingia and corydalis, $13\frac{3}{4}$ grains each iris, sambucus and chimaphila, and 7 grains each coriander and xanthoxylum. Used as Alterative. Average Dose: 1 fluidrachm (4 mils [Cc.]).

SYRUP TAR.

Syrupus Picis Liquidæ. 0.5 Gm. tar in 100 mils (Cc.); or 2.3 grains per fluidounce. Expectorant. Average Dose: 1 fluidrachm (4 mils).

⊕ **Syrup Tolu, Squibb** pint

Syrupus Tolutanus. Each fluidounce contains 24 minims tincture tolu. Expectorant, but mainly Vehicle. Average Dose: 4 fluidrachms (15 mils [Cc.]).

Syrup White Pine Compound, Squibb pint

Syrupus Pini Strobi Compositus, N. F. The N. F. IV has changed the formula of this preparation to the extent of omitting the morphine sulphate. Expectorant. Average Dose: 1 fluidrachm (4 mils [Cc.]).

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

Syrup White Pine Compound with Morphine, Squibb pint

Syrupus Pini Strobi Compositus cum Morphina, N. F. Each fluidounce represents about 39 grains each white pine bark and wild cherry, 4.6 grains each aralia and balsam poplar buds, 3.7 grains sanguinaria, 3.2 grains sassafras, about $\frac{1}{5}$ grain morphine sulphate, and 3 minims chloroform. Expectorant; in long-standing coughs after gripe, etc. **Average Dose:** 30 minims (2 mils [Cc.]).

Syrup White Pine Compound with Morphine and Tar, Squibb pint

Preceding product, with addition of tar.

Syrup White Pine Compound with Tar, Squibb pint

Syrup White Pine Compound, with addition of tar.

⊕ **Syrup Wild Cherry, Squibb** pint

Syrupus Pruni Virginianæ. Prepared by water and glycerin percolation of wild cherry and solution of sugar. The full medicinal value of the wild cherry is thus retained. Cough Sedative, but mainly Vehicle. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

SYRUP YERBA SANTA AROMATIC. See Syrup Eriodictyon Aromatic.

Talcum Powder, Squibb sprinkler-top cans, per doz.

A hygienic toilet powder specially prepared for the dressing room and nursery. Non-irritating and absorbent. This powder is made in response to many requests received by us from physicians who have felt the need for a pure product of correct composition. The talcum powders of the market are often harmful because they contain impurities, or souring perfume oils, all of which are injurious. Squibb's Talcum Powder is made from best selected talcum, carefully prepared in impalpable powder form. It is guaranteed to be free from starch, chalk and other foreign substances, and may therefore be used freely even on the most sensitive skin. Supplied in *Carnation* and *Violet* odors, and *Unscented*.

Talcum Purified, Squibb

*Fine Powder, for Dusting	tin, lb.
Coarse Powder, for Filtering	tin, lb.

Talcum Purificatum. Purified, native, hydrous magnesium silicate, freed from soluble matter by boiling in acidulated water.

TAMARIND.

Tamarindus, N. F. Preserved pulp of fruit of *Tamarindus indica* (Fam. *Leguminosæ*). Reddish-brown to dark-brown, pulpy mass. Distinct odor; sweet, agreeably acid taste. Mild Laxative. **Average Dose:** 4 drachms (15 Gm.).

⊕ TANNALBIN.

Tannin Albuminate Exsiccated. Light-brown, odorless, tasteless, powder; 50 percent. tannic acid. Insoluble in ordinary solvents. Intestinal Astringent. **Dose:** 15 to 30 grains (1 to 2 Gm.).

TANNIGEN.

Acetyltannin. Light-gray, nearly odorless and tasteless, slightly hygroscopic powder. Soluble in alcohol; insoluble in water. Intestinal Astringent. **Dose:** 8 to 15 grains (0.5 to 1 Gm.).

Tannin. See Acid Tannic.

TANNOFORM.

Tannin-formaldehyde. $\text{CH}_2(\text{C}_{14}\text{H}_9\text{O}_9)_2$. Condensation product of tannic acid and formaldehyde. Whitish-red, odorless powder. Soluble in alcohol, ammonia, alkalies; insoluble in water. Drying Antiseptic and Deodorant; Intestinal Astringent and Disinfectant. Externally pure or as 10 to 25 percent. dusting powder. **Dose:** 4 to 15 grains (0.25 to 1 Gm.).

TANNOPIN.

Hexamethylenetetraminetannin; Tannon. $(\text{CH}_2)_6\text{N}_4(\text{C}_{14}\text{H}_{10}\text{O}_9)_3$. Fawn-colored, odorless, tasteless powder. 87 percent. tannic acid; 13 percent. hexamethylenamine. Insoluble in ordinary solvents; soluble with decomposition in dilute alkalies. Intestinal Astringent and Disinfectant. **Dose:** 8 to 15 grains (0.5 to 1 Gm.), 4 times daily.

⊕ TAR.

Pix Liquida; Pine Tar. Obtained by destructive distillation of wood of *Pinus palustris* or other species of *Pinus* (Fam. *Pinaceæ*). Miscible with alcohol, ether, chloroform, oils; slightly soluble in water. Antiseptic, Anticatharrhal, Expectorant; used mainly topically, in skin diseases. **Average Dose:** 8 grains (0.5 Gm.). (See also Wine.)

TARAXACUM.

Taraxacum; Dandelion. Dried rhizome and roots of *Taraxacum officinale* (Fam. *Compositæ*). Odorless; taste bitter. Bitter Tonic, Mild Laxative. **Average Dose:** 120 grains (8 Gm.). (See also Elixir; Extract; Fluidextract.)

Tartar Emetic. See Antimony and Potassium Tartrate.

Tartar, Soluble. See Potassium Tartrate.

TEA, BREAST. See Species Pectoral.

TEA, LAXATIVE. See Species, Laxative.

TEA, ST. GERMAIN. See Species, Laxative.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

TEREBENE.

Terebenum. A liquid consisting of $\bar{\alpha}$ dipentene and other hydrocarbons produced by action of concentrated sulphuric acid on oil turpentine. Nearly colorless; agreeable, thyme-like odor; aromatic, slightly terebinthinate taste. Sp. gr. 0.860 to 0.865. 1 Gm. dissolves in 3 mls (Cc.) alcohol; slightly soluble in water. Expectorant, like oil turpentine; in chronic coughs chiefly. **Average Dose:** 4 minims (0.25 mil [Cc.]). Terebene becomes resinified on exposure, turns yellow, and acquires an acid reaction.

⊕ **Terpin Hydrate, Squibb**

*Crystals	carton, lb.	; 1/4 lb.	; bottle, oz.
Powdered	carton, lb.	; 1/4 lb.	; bottle, oz.

Terpini Hydras. $C_{10}H_{20}O_2 \cdot H_2O$. Hydrate of the dihydroxy-alcohol terpin. Colorless, lustrous, rhombic prisms; or white powder. Nearly odorless; slightly aromatic, faintly bitter taste. 1 Gm. dissolves in about 200 mls (Cc.) water, 13 alcohol, 135 chloroform, 140 ether. Expectorant, Antiseptic, Diuretic. **Average Dose:** 4 grains (0.25 Gm.); as diuretic, 10 to 15 grains (0.65 to 1 Gm.).

Test Solutions. See under Reagents (Part IV).

Test for Occult Blood. See Tablets Occult Blood Test, Part II of this book.

Theine. See Caffeine.

⊕ **Theobromine, Squibb** bottle, oz. ; 1/8-oz.

Dimethylxanthine. $C_7H_8O_2N_4$. Alkaloid from *Theobroma Cacao* (Fam. *Sterculiaceæ*). White, very bitter powder. Soluble in ether; sparingly in water, alcohol, chloroform. Diuretic, in cardiac dropsy. **Dose:** 5 to 15 grains (0.3 to 1 Gm.).

⊕ **Theobromine Sodio-Salicylate, Squibb**

bottle, oz. ; 1/8-oz.

Theobrominæ Sodio-Salicylas. Sodium-Theobromine and Sodium Salicylate in approximately molecular proportions. Yields not less than 46.5 percent. theobromine. Fine, white, odorless powder; sweetish, saline taste. 1 Gm. dissolves in 1 mil (Cc.) water; slightly soluble in alcohol. On exposure it decomposes and becomes less soluble. Incompatible with acids, acid syrups, bicarbonates, ferric and quinine salts, in solution. Diuretic. **Average Dose:** 15 grains (1 Gm.).

THEOCIN. Brand of Theophylline.

THEOPHYLLINE.

Theophyllina. Organic base isomeric with theobromine; obtained from tea and also synthetically. $C_7H_8O_2N_4.H_2O$. White, odorless, bitter powder. 1 Gm. dissolves in 100 mils (Cc.) water, 80 alcohol; sparingly soluble in ether. Forms salts with alkalis. Diuretic, like theobromine; more powerful, but not so lasting. **Average Dose:** 4 grains (0.25 Gm.), in warm tea.

THIGENOL.

Solution Sodium Sulpholeate. Contains 2.85 percent. sulphur. Dark-brown, thick liquid, of slight sulphidic odor. Soluble freely in water, diluted alcohol, glycerin, chloroform, oils. Incompatible with mineral acids. Alterative, Anticatarrhal, Antiphlogistic, similar in use to ichthyol. **Dose:** 3 to 10 grains (0.2 to 0.65 Gm.). Externally in all strengths.

Thiosinamine, Squibb

bottle, oz.

Allyl Sulphocarbamide; Rhodalline. $C_3H_5.CH_3N_2S$. Colorless, rhombic crystals; garlic odor; bitter taste. Moderately soluble in water; readily in alcohol and ether. Sodium or potassium salicylate increases aqueous solubility. Resolvent, Discussant. Used internally, or hypodermically (in 10 percent. glycerin-aqueous or hydroalcoholic solution), in stricture, corneal opacity, deafness, etc.; externally in lupus, scars, glandular tumors, etc. **Dose:** $\frac{1}{2}$ to $1\frac{1}{2}$ grains (0.03 to 0.1 Gm.), two or three times daily by mouth; twice a week subcutaneously, in 15 percent. alcoholic or 10 percent. glycerinated water solution. A 15 percent. aqueous solution can be prepared with aid of $7\frac{1}{2}$ percent. antipyrine. Incompatible with water alone, which decomposes it, but this change is to a limited extent prevented by the presence of glycerin.

THOMPSONIAN NUMBER SIX. See Tincture Capsicum and Myrrh.

THOMPSON'S SOLUTION PHOSPHORUS. See Solution Phosphorus.

THORNAPPLE. See Stramonium.

THOROUGHWORT. See Eupatorium.

THUJA.

Thuja, N. F.; Arbor Vitæ. Recently dried, leafy young twigs of *Thuja occidentalis* (Fam. Pinaceæ). Strongly balsamic, aromatic odor; camphoraceous, bitter taste. Used as Febrifuge, Expectorant, Anthelmintic; indications not well defined. **Average Dose:** 30 grains (2 Gm.).

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

THYME.

Thymus, N. F. Dried tops of *Thymus vulgaris* (Fam. *Labiatae*). Agreeable, aromatic odor; aromatic, warming taste. Rubefacient; Aromatic, Carminative. Average Dose: 60 grains (4 Gm.).

⊕ **Thymol, Squibb**

bottle, oz.

Thymol; Thyme Camphor. $C_{10}H_{14}O$. Natural, volatile phenol occurring in oil *Thymus vulgaris* (Thyme) and some other volatile oils. Large, colorless, translucent prisms; thyme-like odor; pungent, aromatic taste. 1 Gm. dissolves in 1010 mls (Cc.) water, 1 alcohol, 0.7 chloroform, 1.5 ether, 1.7 olive oil. Antiseptic, Anthelmintic. Average Dose: antiseptic, 2 grains (0.13 Gm.); anthelmintic, 15 grains (1 Gm.) per day. When triturated with about equal part camphor, menthol, chloral hydrate, antipyrine, carbolic acid, quinine sulphate, salol, or urethane, it liquefies.

⊕ **Thymol Iodide, Squibb**

bottle, oz.

Thymolis Iodidum; Dithymol Diiodide. $C_{20}H_{24}O_2I_2$. Reddish-brown or reddish-yellow, bulky powder; faint aromatic odor; not less than 43 percent. iodine. Soluble readily in ether, chloroform, collodion and oils; slightly in alcohol; insoluble in water or glycerin. Wound antiseptic like iodoform, used like latter. In making solutions, avoid heat and dispense in dark-amber vials.

THYREOIDECTIN.

Dried blood of thyroidectomied animals. Coarse, reddish-brown powder. Used mainly in Basedow's disease. Dose: 5 to 10 grains (0.3 to 0.65 Gm.), in capsules.

⊕ **Thyroids Dried, Squibb**

bottle, oz.

Thyroideum Siccum. Thyroid glands of animals used for food by man, freed from connective tissue and fat, cleaned, dried and powdered. Yellowish powder; slight odor; 1 Gm. represents about 5 Gm. fresh gland and contains about 0.2 percent. iodine. Alterative, Anticachectic; in myxedema, obesity, struma, etc. Average Dose: $1\frac{1}{2}$ grains (0.1 Gm.).

THYROIDINE. See Iodothyrene.

Tin (Mossy) Reagent. See Reagents (Part IV).

TINCTURES.

Squibb's Tinctures are made from the best quality of crude drug obtainable, no drug being accepted that does not fully come up to the high standard set for it by the Squibb Laboratories, which in many instances is considerably above the maximum pharmacopœial requirements;

and such as contain definite proximate principles are carefully assayed and standardized to the U. S. P. requirements. In addition, the potent tinctures for which the U. S. P. demands or recommends *physiological* assays, are assayed by the methods therein outlined.

⊕ **Tincture Aconite Root, Squibb** pint ; ¼ pint
Tinctura Aconiti. Assays 0.045 to 0.055 Gm. ether-soluble alkaloids in 100 mils (Cc.). Also *physiologically* tested; minimum lethal dose not greater than 0.0004 mil per Gm. weight of guinea-pig. Antipyretic, Circulatory Sedative, Analgesic, **Average Dose:** 5 minims (0.3 mil). Acts within 15 minutes, and is eliminated within 3 hours. **Antidotes:** emetics; atropine, digitalis or ammonia; small, frequent doses of stimulants; artificial respiration.

Tincture Aloes, Squibb pint ; ¼ pint
Tinctura Aloes. 10 Gm. aloes and 20 Gm. licorice in 100 mils (Cc.). Cathartic; acts mostly on large intestines. **Average Dose:** 30 minims (2 mils).

Tincture Aloes and Myrrh, Squibb pint ; ¼ pint
Tinctura Aloes et Myrrhæ, N. F.; Elixir Proprietatis Paracelsi. Contains 10 Gm. each aloes, myrrh and licorice, in 100 mils (Cc.). Cathartic. **Average Dose:** 30 minims (2 mils). Incompatible with water.

Tincture Antiperiodic, Squibb
 *With Aloes pint ; ¼ pint
 Without Aloes pint ; ¼ pint

Tinctura Antiperiodica, N. F.; Warburg's Tincture.

(1) *With Aloes.* Made from extract aloes 175 Gm. in 100 mils [Cc.]), rhubarb, angelica, elecampane, saffron, fennel, gentian, zedoary, cubeb, myrrh, white agaric, camphor, black pepper, cinnamon, ginger, quinine bisulphate (9 grains per fl. oz.). **Dose:** 1 to 4 fluidrachms (4 to 16 mils).

(2) *Without Aloes.* Like preceding, but without extract aloes.

Tincture Arnica Flowers, Squibb pint ; ¼ pint,
Tinctura Arnicæ. 20 Gm. arnica flowers in 100 mils (Cc.). Mild Rubefacient; rarely used internally, as Febrifuge and Alterative. **Average Dose:** 15 minims (1 mil).

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

TINCTURE AROMATIC.

Tinctura Aromatica, N. F. Representing cinnamon, ginger, galangal, cloves and cardamom. Aromatic, Carminative. Average Dose: 30 minims (2 mils [Cc.]).

Tincture Asafetida, Squibb pint ; ¼ pint

Tinctura Asafætidæ. Representing 20 Gm. in 100 mils (Cc.). Used as Nerve Sedative, Carminative. Average Dose: 15 minims (1 mil).

⊕ Tincture Belladonna Leaves, Squibb

pint ; ¼ pint

Tinctura Belladonnæ Foliorum. Assays 0.027 to 0.033 Gm. alkaloids in 100 mils (Cc.). Anodyne, Antispasmodic, Antihydrotic. Average Dose: 12 minims (0.75 mil). Antidotes: tannin, then emetics; morphine; pilocarpine, physostigmine, or aconitine, hypodermically.

Tincture Benzoin, Squibb pint ; ¼ pint

Tinctura Benzoini. 20 Gm. in 100 mils (Cc.). Vulnerary; rarely Expectorant and Anticatarrhal. Average Dose: 15 minims (1 mil). Incompatible with water.

⊕ Tincture Benzoin Compound, Squibb

pint ; ¼ pint

Tinctura Benzoini Composita; Friars's or Turlington's Balsam. 10 Gm. benzoin, 2 Gm. aloes, 8 Gm. storax and 4 Gm. balsam tolu, in 100 mils (Cc.). Anticatarrhal, Vulnerary. Average Dose: 30 minims (2 mils).

TINCTURE, BESTUSCHEFF'S. See Tincture Iron Chloride, Ethereal.

TINCTURE, BITTER.

Tinctura Amara, N. F.; Stomachic Tincture; Bitter Stomach Drops. Representing gentian, centaury, bitter orange peel, and zedoary. Average Dose: 30 minims (2 mils [Cc.]).

TINCTURE BITTER ORANGE PEEL. See Tincture Orange Peel Bitter.

Tincture Bryonia, Squibb pint ; ¼ pint

Tinctura Bryoniæ, N. F. 10 Gm. bryonia root in 100 mils (Cc.). Hydragogue Cathartic, Alterative. Average Dose: 1 fluidrachm (4 mils [Cc.]).

TINCTURE CACTUS GRANDIFLORUS.

Tinctura Cacti Grandiflori, N. F. 50 Gm. drug to 100 mils (Cc.); mentisruum, pure alcohol. Used as Cardiac Stimulant; value doubted by many. Average Dose: 15 minims (1 mil).

Tincture Calabar Bean. See Tincture Physostigma.

TINCTURE CALENDULA.

Tinctura Calendulæ, N. F.; Tincture Marigold. 20 Gm. in 100 mils (Cc.). Mild Counter-irritant, Discutient.

Tincture Calumba, Squibb pint ; ¼ pint,
Tinctura Calumbæ; Tincture Colombo. 20 Gm. in 100 mils (Cc.). Bitter Tonic, Stomachic. Average Dose: 1 fluidrachm (4 mils).

Tincture Cannabis, Squibb pint ; ¼ pint
Tinctura Cannabis. Represents 10 Gm. cannabis in each 100 mils (Cc.). Physiologically assayed by U. S. P. method; incoördination produced by 0.3 mil per kilo weight of dog. Antispasmodic, Sedative. Average Dose: 12 minims (0.75 mil). Incompatible with water. Antidotes: emetics; atropine, strychnine, or caffeine hypodermically; strong coffee.

⊕ **Tincture Cantharides, Squibb** pint ; ¼ pint
 Of drug strength of U. S. P. *Tinctura Cantharidis*; Tincture Spanish Flies, (10 Gm. in 100 mils [Cc.]), but made by a different process which extracts the drug more satisfactorily and thus yields a tincture of greater activity. Counter-irritant and Hairgrowth Stimulant; Genito-urinary Stimulant. Average Dose: 1½ minims (0.1 mil), well diluted. Antidotes: emetics; flaxseed tea; morphine subcutaneously; opium by rectum. Avoid oils.

⊕ **Tincture Capsicum, Squibb** pint ; ¼ pint
Tinctura Capsici; Tincture Cayenne Pepper. 10 Gm. in 100 mils (Cc.). Rubefacient, Carminative, Stomachic. Average Dose: 8 minims (0.5 mil), diluted.

TINCTURE CAPSICUM AND MYRRH.

Tinctura Capsici et Myrrhæ, N. F.; Hot Drops; Thompsonian Number Six. 1 fluidounce represents about 14 grains capsicum and 55 grains myrrh. Carminative, Stomachic. Average Dose: 30 minims (2 mils [Cc.]), in sweetened water.

TINCTURE CARAMEL.

Tinctura Caramellis, N. F. 10 Gm. caramel in 100 mils (Cc.). Brown coloring for liquids.

⊕ **Tincture Cardamom, Squibb** pint ; ¼ pint
Tinctura Cardamomi. 15 Gm. in 100 mils (Cc.), as against 20 Gm. in U. S. P. VIIIth Rev. Carminative, Corrective, Aromatic. Average Dose: 30 minims (2 mils).

Tincture Cardamom Compound, Squibb

pint ; ¼ pint
Tinctura Cardamomi Composita. 20 Gm. cardamom, 25 Gm. Saigon cinnamon, 12 Gm. caraway, 5 Gm. cochineal, together with glycerin and diluted alcohol to make 1000 mils (Cc.). Aromatic Carminative, Stomachic. Average Dose: 1 fluidrachm (4 mils).

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

Tincture Catechu Compound. See Tincture Gambir Compound.

Tincture Cimicifuga, Squibb pint ; ¼ pint
Tinctura Cimicifugæ, N. F.; Tincture Black Cohosh. Dropped from U. S. P. 20 Gm. in 100 mls (Cc.). Used as Alterative, Sedative, Emmenagogue; in rheumatism, chorea, dysmenorrhea, etc. **Average Dose:** 1 fluidrachm (4 mls).

⊕ **Tincture Cinchona, Squibb** pint ; ¼ pint
Tinctura Cinchonæ. Assays 0.8 to 1 Gm. alkaloids in 100 mls (Cc.). Astringent Bitter Tonic. **Average Dose:** 1 fluidrachm (4 mls).

Tincture Cinchona Compound, Squibb pint ; ¼ pint
Tinctura Cinchonæ Composita. 100 mls (Cc.) represent 10 Gm. red cinchona, 8 Gm. bitter-orange peel, and 2 Gm. serpentaria. Assays 0.4 to 0.5 Gm. alkaloids in each 100 mls (Cc.). Aromatic Astringent Bitter. **Average Dose:** 1 fluidrachm (4 mls).

TINCTURE CINNAMON.
Tinctura Cinnamomi. 20 Gm. Saigon cinnamon, and 7.5 Gm. glycerin in 100 mls (Cc.). Carminative, Antidiarrheal. **Average Dose:** 30 minims (2 mls).

TINCTURE COCCULUS INDICUS.
Tinctura Cocculi Indici, N. F.; Tincture Fish Berries. 10 Gm. drug to 100 mls (Cc.); menstruum, diluted alcohol. External Parasiticide. **Antidotes:** none known. It is advised to give emetics, copious draughts of warm water and to treat symptoms as they arise.

⊕ **Tincture Colchicum Seed, Squibb** pint ; ¼ pint
Tinctura Colchici Seminis. Assays 0.036 to 0.044 Gm. colchicine in 100 mls (Cc.). Antipodagric, Antineuralgic. **Average Dose:** 30 minims (2 mls).

TINCTURE COTO. See Tincture Paracoto.

TINCTURE CUBEÆ.
Tinctura Cubebæ, N. F. 20 Gm. Cubeb in 100 mls (Cc.) Carminative, Expectorant. Genito-urinary Anticatharrhal. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Tincture Cudbear, Squibb pint ; ¼ pint
Tinctura Persionis, N. F. Coloring-agent where a bright-red tint is desired, particularly in acid liquids.

Tincture Cudbear Compound, Squibb pint ; ¼ pint
Tinctura Persionis Composita, N. F. Contains cudbear and caramel. Brownish-red coloring agent.

TIKTURE DELPHINIUM. See Tincture Larkspur.

⊕ **Tincture Digitalis, Squibb** pint ; ¼ pint
Tinctura Digitalis. 10 Gm. digitalis in 100 mils (Cc.). Physiologically assayed according to U. S. P. and standardized; minimum lethal dose not more than 0.006 mil (Cc.) per Gm. weight of frog. Also assayed biologically by "Cat Method" of Dr. Hatcher. Cardiac Stimulant, Diuretic; in cardiac decompensation; most effective when heart action is rapid and very irregular; effective in edema only when latter is due to impaired circulation. **Average Dose:** 8 minims (0.5 mil). Very slowly absorbed and eliminated. Shows no positive effect on circulation within 36 or 48 hours and no diuretic influence within 72 hours. **Antidotes:** tannin, emetics; nitroglycerin, strychnine or alcohol; morphine; rest in horizontal position.

Tincture Digitalis Fat-Free, Squibb pint ; ¼ pint ; oz.
 From digitalis leaves deprived of their fat by a process which does not destroy or remove any proximate principles. Physiologically assayed and standardized by "Cat Method" of Hatcher; each mil (Cc.) represents 1 cat unit. Direct Cardiac Stimulant, Diuretic. **Average Dose:** 8 minims (0.5 mil).

Tincture Dover's Powder. See Tincture Ipecac and Opium.

TIKTURE ERGOT AMMONIATED.

Tinctura Ergotæ Ammoniata, N. F. 25 Gm. drug in 100 mils (Cc.). Menstruum, ammonia water (10%), alcohol and water. Vasoconstrictor, Parturient. **Average Dose:** 1 fluid drachm (4 mils).

TIKTURE FERRATED EXTRACT APPLES.

Tinctura Ferri Pomata, N. F.; Tincture Iron Malate (Crude). 10 Gm. ferrated extract apples, 10 mils (Cc.) alcohol, 80 mils cinnamon water. Mild Hematinic. **Average Dose:** 1 fluidrachm (4 mils), containing about ⅛ grain metallic iron.

Tincture Gambir Compound, Squibb pint ; ¼ pint
Tinctura Gambir Composita. 5 Gm. gambir and 2.5 Gm. Saigon cinnamon in 100 mils (Cc.). Intestinal and External Astringent. **Average Dose:** 1 fluidrachm (4 mils).

Tincture Gelsemium, Squibb pint ; ¼ pint
Tinctura Gelsemii; Tincture Yellow Jasmine. 10 Gm. drug in 100 mils (Cc.); assays about 0.03 Gm. alkaloids in 100 mils. Antineuralgic, Antispasmodic, Nerve Sedative. **Average Dose:** 4 minims (0.25 mil). **Antidotes:** emetics; atropine or strophanthin subcutaneously; stimulants.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

⊕ **Tincture Gentian Compound, Squibb**

pint ; ¼ pint

Tinctura Gentianæ Composita. 10 Gm. gentian, 4 Gm. bitter-orange peel and 1 Gm. cardamom, in 100 mils (Cc.). Bitter Tonic, Stomachic. **Average Dose:** 1 fluidrachm (4 mils).

⊕ **Tincture Ginger, Squibb**

pint ; ¼ pint

Tinctura Zingiberis. 20 Gm. in 100 mils (Cc.). Made from best Jamaica ginger obtainable. Aromatic Carminative, Gastro-intestinal Stimulant. **Average Dose:** 30 minims (2 mils).

Tincture Golden Seal. See Tincture Hydrastis.

Tincture Green Soap. See Liniment Soap Soft.

Tincture Guaiac, Squibb

pint ; ¼ pint

Tinctura Guaiaci. 20 Gm. guaiac in 100 mils (Cc.). Alterative; in chronic rheumatism, gout, etc. **Average Dose:** 1 fluidrachm (4 mils). Incompatible with water.

Tincture Guaiac Ammoniated, Squibb

pint ; ¼ pint

Tinctura Guaiaci Ammoniata. 20 Gm. guaiac with aromatic spirit ammonia to produce 100 mils (Cc.). Alterative, Emmenagogue. **Average Dose:** 30 minims (2 mils). Incompatible with water.

TINCTURE GUAIAIC COMPOUND.

Tinctura Guaiaci Composita, N. F.; Dewees's Tincture of Guaiac. Each fluidounce represents about 57 grains guaiac, $2\frac{3}{4}$ grains potassium carbonate and 14.6 grains pimenta. Alterative, Emmenagogue. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Tincture Henbane. See Tincture Hyoscyamus.

TINCTURE HOPS.

Tinctura Humuli, N. F. 20 Gm. hops in 100 mils (Cc.). Bitter Stomachic. **Average Dose:** 1 fluidrachm (4 mils).

Tincture Hydrastis, Squibb

pint ; ¼ pint

Tinctura Hydrastis; Tincture Golden Seal. Assays 0.36 to 0.44 Gm. ether-soluble alkaloids in 100 mils (Cc.). Bitter Tonic, Astringent, Alterative. **Average Dose:** 1 fluidrachm (4 mils).

⊕ **Tincture Hyoscyamus, Squibb**

pint ; ¼ pint

Tinctura Hyoscyami; Tincture Henbane. Assays 0.0055 to 0.0075 Gm. alkaloids in 100 mils (Cc.). Sedative, Antispasmodic, Anodyne. **Average Dose:** 30 minims (2 mils). **Antidotes:** morphine, pilocarpine, physostigmine, aconitine; stimulants.

TINCTURE IGNATIA.

Tinctura Ignatiæ, N. F. Assays 0.18 to 0.22 Gm. alkaloids in 100 mils (Cc.). Nerve Stimulant, Bitter Stomachic; in chronic constipation, neuralgia, nervous depression, etc. **Average Dose:** 10 minims (0.6 mil [Cc.]). **Antidotes:** tannin, then emetics; chloral hydrate with bromides per rectum; chloroform by inhalation, if required.

⊕ **Tincture Iodine, Squibb** g. s. bottle, pint ; ¼ pint

Tinctura Iodii. 7 Gm. iodine and 5 Gm. potassium iodide in 100 mils (Cc.). Antiseptic, Discutient, Counter-irritant, Alterative. **Average Dose:** 1½ minims (0.1 mil). Externally undiluted or with equal volume alcohol. **Antidotes:** apomorphine hypodermically; starch paste or flour in warm water; demulcents.

Tincture Iodine Stronger, Squibb

(Churchill's Tincture) g. s. bottle, pint ; ¼ pint

Tinctura Iodi Fortior, N. F. 100 mils (Cc.) contains 16.5 Gm. iodine and 3.3 Gm. potassium iodide. **Dose:** ½ to 1 minim (0.03 to 0.06 mil).

TINCTURE IODINE DECOLORIZED.

Tinctura Iodi Decolorata, N. F. Practically an alcoholic solution of sodium and ammonium iodides for external use as Discutient. Contains 8.3 Gm. iodine per 100 mils (Cc.) in combined form, no free iodine.

† **Tincture Ipecac and Opium, Squibb**

pint ; ¼ pint

Tinctura Ipecacuanhæ et Opii, N. F.; Liquid Dover's Powder; Tincture Dover's Powder. Made from a depurated solution of opium, and hence contains only the valuable anodyne and hypnotic principles of opium, beside the ipecac constituent. 100 mils (Cc.) represent 10 Gm. each deodorized opium and ipecac. Diaphoretic, Anodyne, Antispasmodic. **Average Dose:** 8 minims (0.5 mil) (containing nearly 1/10 grain morphine). **Antidotes:** potassium permanganate solution (2 grains in water), then emetics; atropine or strychnine hypodermically.

⊕ **Tincture Iron Chloride, Squibb**

g. s. bottle, pint, ; ¼ pint, ; oz.

Tinctura Ferri Chloridi; Tincture Iron Per- or Sesqui-chloride. Contains 35 volume percent. solution ferric chloride (equal to 13 percent. ferric chloride, or 4.48 percent. iron), with alcohol. Styptic, Astringent; Hematinic. **Average Dose:** 8 minims (0.5 mil [Cc.]), well diluted. Incompatible with alkalies, alkali benzoates, antipyrine, tannin, and vegetable infusions, tinctures or decoctions.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

TINCTURE IRON CHLORIDE, ETHEREAL.

Tinctura Ferri Chloridi Ætherea, N. F.; Bestuscheff's Tincture; Lamotte's Drops. 1 fluidounce represents about 4 grains iron and 120 minims ether. Hematinic. Average Dose: 30 minims (2 mils [Cc.]). Incompatible with vegetable decoctions, infusions or tinctures.

Tincture Iron Citro-Chloride, Squibb

g. s. bottle, pint, ; ¼ pint
Tinctura Ferri Citro-Chloridi, N. F.; Tasteless Tincture Iron. Combining solution iron chloride with sodium citrate, in alcohol. Same iron strength as official Tincture Iron Chloride. Hematinic. Average Dose: 8 minims (0.5 mil [Cc.]).

Tincture Iron, Tasteless. See Tincture Iron Citro-Chloride.

TINCTURE JALAP

Tinctura Jalapæ, N. F. 20 Gm. jalap in 100 mils (Cc.). Hydragogue Cathartic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

TINCTURE JALAP COMPOUND.

Tinctura Jalapæ Composita, N. F. Each fluidounce represents about 57 grains jalap and 14¼ grains resin scammony. Hydragogue Cathartic. Average Dose: 1 fluidrachm (4 mils [Cc.]).

Tincture Kino, Squibb pint ; ¼ pint

Tinctura Kino. Representing 10 Gm. kino in 100 mils (Cc.), as against 5 Gm. U. S. P. VIIIth Rev. Intestinal and Pharyngeal Astringent. Average Dose: 1 fluidrachm (4 mils).

† TINCTURE KINO AND OPIUM.

Tinctura Kino et Opii Composita, N. F.; Tincture Kino Compound. Each fluidounce represents about 4.6 grains each kino and opium, with spirit camphor, aromatic spirit ammonia and oil cloves. Intestinal Astringent, Carminative; chiefly in colic and acute diarrhea. Average Dose: 1 fluidrachm (4 mils [Cc.]).

TINCTURE KRAMERIA.

Tinctura Krameriaæ, N. F.; Tincture Rhatany. 20 Gm. in 100 mils (Cc.). Internal and External tannin-bearing Astringent. Average Dose: 1 fluidrachm (4 mils); externally in 10 percent, dilution.

TINCTURE LACTUCARIUM.

Tinctura Lactucarii. 50 Gm. lactucarium in 100 mils (Cc.), with 25 mils glycerin. Cough Sedative, Antispasmodic. Average Dose: 30 minims (2 mils).

TINCTURE LARKSPUR.

Tinctura Delphinii, N. F. 10 Gm. drug to 100 mils (Cc.). External Parasiticide. Antidotes: tannin, emetics; ammonia, digitalis, brandy.

Tincture Lavender Compound, Squibb

pint ; ¼ pint

Tinctura Lavandulæ Composita; Lavender Drops; Compound Spirit Lavender. Containing in 1000 mils (Cc.) 8 mils oil lavender flowers, 2 mils oil rosemary, 20 Gm. Saigon cinnamon, 5 Gm. clove, and 10 Gm. each nutmeg and red saunders. Rubefacient; Carminative, Aromatic Flavoring. Average Dose: 30 minims (2 mils).

Tincture Lemon Peel, Squibb

pint ; ¼ pint

Tinctura Limonis Corticis. 50 Gm. fresh peel in 100 mils (Cc.). Flavoring ingredient.

⊕ **Tincture Lobelia, Squibb**

pint ; ¼ pint

Tinctura Lobeliæ. 10 Gm. drug in 100 mils (Cc.). Expectorant, Emetic. Average Dose: expectorant, 15 minims (1 mil); emetic, 1 fluidrachm (4 mils).

TINCTURE MUSK.

Tinctura Moschi. 5 Gm. musk in 100 mils (Cc.). Analeptic, Antispasmodic. Average Dose: 1 fluidrachm (4 mils).

⊕ **Tincture Myrrh, Squibb**

pint ; ¼ pint

Tinctura Myrrhæ. 20 Gm. myrrh in 100 mils (Cc.). Astringent Protective, externally; Carminative, internally. Incompatible with aqueous liquids. Average Dose: 15 minims (1 mil).

TINCTURE NUTGALL.

Tinctura Gallæ, N. F. Dropped from U. S. P. 20 Gm. nutgall with 10 mils (Cc.) glycerin in 100 mils. Astringent. Average Dose: 1 fluidrachm (4 mils).

⊕ **Tincture Nux Vomica, Squibb**

pint ; ¼ pint

Tinctura Nucis Vomicae. Made direct from the drug; not from extract nux vomica as in U. S. P. VIIIth Rev. Assays 0.237 to 0.263 Gm. alkaloids in 100 mils (Cc.). Bitter Stomachic, Nerve Stimulant. Average Dose: 8 minims (0.5 mil). Antidotes: tannin, then emetics; chloral hydrate with bromides per rectum; chloroform by inhalation if required.

‡ **Tincture Opium, Squibb**

pint ; ¼ pint

Depurated Tincture Opium; Squibb's Laudanum. Prepared by a process devised by Dr. E. R. Squibb whereby the odorous and other noxious principles of opium are removed while the therapeutically valuable constituents are retained. Therapeutically superior to strictly U. S. P. tincture opium. Assays about 1 Gm. anhydrous morphine in 100 mils (Cc.). Antispas-

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

† Tincture Opium, Squibb (Cont.)

modic, Antiphlogistic, Anodyne, Cerebrospinal Depressant. **Average Dose:** 8 minims (0.5 mil). Acts in 20 minutes; completely eliminated in 48 hours. **Antidotes:** potassium permanganate (2 grains in solution), then emetics; atropine or strychnine hypodermically; hot strong coffee; exercise.

TINCTURE OPIUM ACETATED. See Vinegar Opium.

Tincture Opium Camphorated, Squibb

pint ; ¼ pint

Tinctura Opii Camphorata; Paregoric; Elixir Paregoric. Each fluidounce represents about 1.8 grains each opium, benzoic acid and camphor, and 1.9 minims oil anise, in diluted alcohol with a little glycerin. Carminative, Anodyne. **Average Dose:** 1 fluidrachm (4 mils [Cc.]), diluted.

† Tincture Opium Compound, Squibb

pint ; ¼ pint ; oz.

Squibb's Diarrhea Mixture; Mixture Opium and Chloroform Compound. Each fluidrachm contains about 12 minims each tincture opium, tincture capsicum and spirit camphor, and 4½ minims chloroform, with alcohol,—all U. S. P. 1860 strength. **Dose:** for persons over 18 years, a teaspoonful; from 14 to 18 yrs., a small teaspoonful; from 10 to 14 yrs., half teaspoonful; from 6 to 10 yrs., 30 drops; from 2 to 6 yrs., 10 to 30 drops; for infants, 1 to 10 drops, according to age; always well diluted.

†⊕ Tincture Opium Deodorized, Squibb

pint ; ¼ pint

Tinctura Opii Deodorati. Assays 0.95 to 1.05 Gm. anhydrous morphine in 100 mils (Cc.). Action, dose, etc.: as of regular tincture opium.

† TINCTURE OPIUM WITH SAFFRON.

Tinctura Opii Crocata, N. F.; Sydenham's Laudanum. Same strength as tincture opium, but containing in each 100 mils (Cc.) 2.5 Gm. saffron and 0.6 Gm. each cinnamon and clove. Sedative, Carminative. **Average Dose:** 10 minims (0.6 mil).

TINCTURE ORANGE PEEL, BITTER.

Tinctura Aurantii Amari. 20 Gm. bitter orange peel in 100 mils (Cc.). Flavoring ingredient; Aromatic Bitter Stomachic. **Average Dose:** 1 fluidrachm (4 mils).

Tincture Orange Peel, Sweet, Squibb

pint ; ¼ pint

Tinctura Aurantii Dulcis. 50 Gm. grated fresh sweet orange peel in 100 mils (Cc.). Flavoring ingredient; Stomachic. **Average Dose:** 1 fluidrachm (4 mils).

TINCTURE PARACOTO.

Tinctura Paracoto, N. F. 100 mils (Cc.) represent 12.5 Gm. bark. Intestinal Astringent. **Average Dose:** 30 minims (2 mils [Cc.]).

TINCTURE PASSION FLOWER.

Tinctura Passifloræ, N. F. 20 Gm. drug in 100 mils (Cc.) diluted alcohol. Used as Nerve Sedative, Hypnotic. **Average Dose:** acc. to N. F., 10 minims (0.6 mil); but as the fluid-extract is usually given in doses of 15 to 30 minims, that dose appears too small.

TINCTURE, PECTORAL.

Tinctura Pectoralis, N. F.; Bateman's Pectoral Drops. Each fluidounce contains 20 minims tincture opium, 30 minims* tincture catechu compound, 20 minims spirit camphor, with oil anise, caramel and diluted alcohol. Cough Sedative, Anticatarhal. **Average Dose** (infants): 10 minims (0.6 mil [Cc.]).

TINCTURE PELLITORY. See Tincture Pyrethrum.

Tincture Physostigma, Squibb pint ; ¼ pint

Tinctura Physostigmatis; Tincture Calabar Bean. Assays 0.013 to 0.017 Gm. alkaloids in 100 mils (Cc.). Antispasmodic, Antineuralgic, peristaltic. **Average Dose:** 15 minims (1 mil). **Antidotes:** emetics; atropine or strychnine subcutaneously; chloral hydrate; stimulants.

TINCTURE PIMPINELLA.

Tinctura Pimpinellæ, N. F. 20 Gm. drug to 100 mils (Cc.). Obsolescent Diuretic, Diaphoretic, Stomachic. **Average Dose:** 1 fluidrachm (4 mils).

TINCTURE PULSATILLA.

Tinctura Pulsatillæ, N. F. From herb of *Anemone Pulsatilla*, 1:10. Obsolescent Alterative, Sedative, Antispasmodic. **Average Dose:** 30 minims (2 mils [Cc.]).

TINCTURE PYRETHRUM.

Tinctura Pyrethri; Tincture Pellitory. 20 Gm. drug in 100 mils (Cc.). Local Irritant; little used.

TINCTURE QUASSIA.

Tinctura Quassiæ. 20 Gm. drug in 100 mils (Cc.). Bitter Stomachic, Vermifuge. **Average Dose:** 30 minims (2 mils).

TINCTURE QUILLAJA.

Tinctura Quillajæ, N. F.; Tincture Soap-bark. Dropped from U. S. P. 20 Gm. drug in 100 mils (Cc.). Expectorant; emulsifier and foam-producer. **Dose:** 15 to 30 minims (1 to 2 mils).

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

TINCTURE RHATANY. See Tincture Krameria.

Tincture Rhubarb, Squibb pint ; ¼ pint

Tinctura Rhei. 20 Gm. rhubarb, 3 Gm. cardamom and 10 mls (Cc.) glycerin, in 100 mls. Stomachic, Laxative. Average Dose: 1 fluidrachm (4 mls).

TINCTURE RHUBARB AQUEOUS.

Tinctura Rhei Aquosa, N. F. 10 Gm. rhubarb in 100 mls (Cc.), with 1 Gm. potassium carbonate and cinnamon water as corrigent. 1 fluidounce represents 45.6 grains rhubarb. Laxative, Stomachic. **Average Dose:** 1 fluidrachm (4 mls).

⊕ **Tincture Rhubarb Aromatic, Squibb**

pint ; $\frac{1}{4}$ pint

Tinctura Rhei Aromatica, 20 Gm. rhubarb, 4 Gm. each Saigon cinnamon and clove, 2 Gm. nutmeg, and 10 mils (Cc.) glycerin, in 100 mils. Each fluidounce represents about 91 grains rhubarb, 18 grains Saigon cinnamon, 18 grains clove and 9 grains nutmeg. Stomachic, Carminative, Laxative. Average Dose: 30 minims (2 mils).

TINCTURE RHUBARB AND GENTIAN.

Tinctura Rhei et Gentianæ. N. F. Each fluidounce represents about 32 grains rhubarb and 8 grains gentian. Laxative, Bitter Tonic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

TINCTURE RHUBARB SWEET.

Tinctura Rhei Dulcis, N. F. Each fluidounce represents 45 $\frac{3}{4}$ grains rhubarb, 18 $\frac{1}{4}$ grains licorice, 18 $\frac{1}{4}$ grains anise, 41 $\frac{1}{2}$ grains cardamom, 48 minims glycerin, alcohol and water. Stomachic, Laxative. Average Dose: 30 minims (2 mls [Cc.]).

TINCTURE RHUBARB VINOUS. See Wine Rhubarb Compound.

TINCTURE SAFFRON.

Tinctura Croci, N. F. 10 Gm. saffron in 100 mils (Cc.) diluted alcohol. Coloring.

Tincture Sanguinaria, Squibb pint ; ¼ pint

Tinctura Sanguinaria; Tincture Blood-root. 10 Gm. drug and 1 mil (Cc.) hydrochloric acid in 100 mils. Expectorant. **Average Dose:** 15 minims (1 mil).

TINCTURE SAW PALMETTO AND SANTAL.

Tinctura Sabal et Santali, N. F. 20 Gm. saw palmetto and 6.5 Gm. sandalwood in 100 mls (Cc.). Genito-urinary Anticatarhal; like oil sandalwood. **Average Dose:** 1 fluidrachm (4 mls).

TINCTURE SERPENTARIA.

Tinctura Serpentariæ, N. F.: Tincture Virginia Snake Root. Dropped from U. S. P. 20 Gm. drug in 100 mls (Cc.). Bitter, similar to gentian. **Average Dose:** 1 fluidrachm. (4 mls).

Tincture Soap Camphorated. See Liniment Soap.

TINCTURE SOAP GREEN COMPOUND. See Liniment Soap Soft Compound.

Tincture Soap Soft. See Liniment Soap Soft.

⊕ **TINCTURE SCILL.**

Tinctura Scillæ. 10 Gm. drug in 100 mils (Cc.). Nauseant Expectorant. Average Dose: 15 minims (1 mil).

Tincture, Stomachic. See Tincture, Bitter.

Tincture Stramonium Leaves, Squibb

pint ; ¼ pint

Tinctura Stramonii. Assays 0.0225 to 0.0275 Gm. alkaloids in 100 mils (Cc.). Antispasmodic, Sedative, Analgesic. Average Dose: 8 minims (0.5 mil).

⊕ **Tincture Strophanthus, Squibb**

pint ; ¼ pint ; oz.

Tinctura Strophanthi. 10 Gm. strophanthus in 100 mils (Cc.). Fat-free. Physiologically assayed by U. S. P. method and standardized; minimum lethal dose not greater than 0.0006 mil per Gm. weight of frog. Cardiac Stimulant, like digitalis; its absorption from alimentary canal is very variable. Average Dose: 8 minims (0.5 mil). Antidotes: emetics; atropine, picrotoxine, camphor; brandy.

TINCTURE SUMBUL.

Tinctura Sumbul, N. F. 10 Gm. drug in 100 mils (Cc.). Used as Nerve Stimulant, Antispasmodic; chiefly in hysteria. Average Dose: 1 fluidrachm (4 mils).

Tincture Sweet Orange Peel. See Tincture Orange Peel Sweet.

TINCTURE TOLU.

Tinctura Tolutana. 20 Gm. balsam tolu in 100 mils (Cc.). Expectorant; Flavoring, with other cough remedies. Average Dose: 30 minims (2 mils).

Tincture Turmeric. See Indicators (Part IV).

Tincture Valerian, Squibb

Tinctura Valerianæ. 20 Gm. valerian in 100 mils (Cc.). Used as Nerve Sedative, Antispasmodic; in hysteria, etc. Average Dose: 1 fluidrachm (4 mils).

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

⊕ **Tincture Valerian Ammoniated, Squibb**

pint ; ¼ pint

Tinctura Valerianæ Ammoniata. 20 Gm. valerian, with aromatic spirit ammonia, in 100 mls (Cc.). Nerve Sedative, Antispasmodic. **Average Dose:** 30 minims (2 mls).

Tincture Vanilla, Squibb

pint ; ¼ pint

Tinctura Vanilla, N. F. Dropp'd from U. S. P. A pure and genuine product, made from choicest Mexican vanilla beans, 10 Gm. per 100 mls (Cc.). Free from adulterant of any nature, so commonly used in the so-called "Extracts of Vanilla." Flavoring.

Tincture Vanillin Compound, Squibb pint ; ¼ pint

Tinctura Vanillini Composita, N. F. III. Dropp'd from present N. F., but still in common use as a flavoring agent. 0.65 Gm. vanillin and 0.04 Gm. coumarin, in 100 mls (Cc.), with alcohol, glycerin, syrup and compound tincture cudbear.

Tincture Veratrum Viride, Squibb pint ; ¼ pint

Tinctura Veratri Viridis. 10 Gm. drug in 100 mls (Cc.). Cardiac and Circulatory Depressant, Diaphoretic. **Average Dose:** 8 minims (0.5 mil [Cc.]). **Antidotes:** tannin, emetics; morphine with atropine, hypodermically; stimulants.

Tincture Viburnum Compound, Squibb

pint ; ¼ pint

Tinctura Viburni Opuli Composita, N. F. Each fluidounce represents about 16¼ grains viburnum opulus, 16¼ grains dioscorea, 43⁄5 grains scullcap, 23 grains clove, 30 grains cinnamon. Used as Uterine Tonic and Antispasmodic, in menstrual disorders. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Tincture, Warburg's. See Tincture Antiperiodic.

TINCTURE ZEDOARY BITTER.

Tinctura Zedoariæ Amara, N. F.; Compound Tincture Zedoary. Each fluidounce represents 112⁄5 grains zedoary, 57⁄10 grains aloes, 25⁄6 grains each rhubarb, gentian, agaric and saffron, with glycerin, alcohol and water. Bitter Stomachic, Laxative. **Average Dose:** 1 fluidrachm (4 mls [Cc.]).

Tolu, Soluble. See Fluid Tolu.

⊕ **Tragacanth, Squibb**

*Ribbons

tin, lb. ; ¼ lb.

Powdered

tin, lb. ; ¼ lb.

Tragacantha. Gummy exudation from stems of *Astragalus gummifer* or other species of *Astragalus* (Fam. *Leguminosæ*). First quality, free from foreign gums and starchy adulterants. Demulcent; Emulsifier, Adhesive.

TRIBROMOMETHANE. See Bromoform.

TRIFERRIN.

Iron Paranucleinate. Reddish, tasteless powder; 22 percent. iron, 2.5 percent. phosphorus in organic combination. Insoluble in ordinary solvents. Hematinic. Dose: 5 grains (0.3 Gm.).

TRIFOLIUM.

Trifolium, N. F.; Red Clover. Dried flowers of *Trifolium pratense* (Fam. *Leguminosæ*). Used in Antiluetic and Alterative compounds, also as Expectorant; considered inert by many. Average Dose: 60 grains (4 Gm.). Given chiefly as fluid-extract, which see.

Trihydroxybenzene. See Pyrogallol (Acid Pyrogallic).

Triiodomethane. See Iodoform.

TRIKRESOL. Brand of Cresol.

TRILLIUM.

Trillium, N. F.; Beth Root. Dried rhizome of *Trillium erectum* (Fam. *Liliaceæ*). Obsolete Astringent. Tonic, Average Dose: 2 Gm. (30 grains). (See also Fluid extract.)

Trimethylxanthine. See Caffeine.

TRINITROPHENOL.

Trinitrophenol; Acid Picric. $C_6H_3N_3O_7$. Newly official. Yellow, odorless, very bitter crystals. 1 Gm. dissolves in 78 mils (Cc.) water, 12 alcohol, 35 chloroform, 65 ether. Explodes when heated rapidly or subjected to percussion. Antiseptic and Keratoplastic, in burns (0.5 to 1% solution), erysipelas (2 to 6% hydroalcoholic solution), wounds (1/4 to 1% solution), etc.; Antiperiodic, internally. Also Re-agent. Average Dose: 1 grain (0.065 Gm.). Antidotes: white of egg, then emetics; sodium sulphate; transfusion with alkaline sodium chloride solution. NOTE: Should be applied cautiously, owing to the danger from absorption.

TRIONAL. Brand of Sulphonethylmethane.

TRIOXYMETHYLENE. See Paraformaldehyde.

TRITICUM.

Triticum; Couch Grass; Dog Grass. Dried rhizome of *Agropyron repens* (Fam. *Gramineæ*). Odor slight; taste sweet. Used as Diuretic, in cystitis and irritable bladder. Average Dose: 120 grains (8 Gm.). (See also Fluidextract.)

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

TRITURATION ELATERIN.

Trituratio Elaterini. 10 percent. elaterin. Powerful Hydragogue Cathartic. Average Dose: $\frac{1}{2}$ grain (0.03 Gm.).

Troches, Squibb. See end of Tablet list (Part II).

† TROPACOCAINE HYDROCHLORIDE.

Benzoylpseudotropine Hydrochloride. $C_8H_{14}NO.C_7H_5O.HCl$. Colorless, acicular crystals. Soluble freely in water. Local Anesthetic, like cocaine.

TRYPSIN.

Proteolytic enzyme of the pancreas. Light-yellow powder; faint odor; meaty taste. Slowly and incompletely soluble in water. Digestive, solvent of false membranes; also been used on malignant tumors. Dose: 1 to 2 grains (0.065 to 0.13 Gm.) with sodium bicarbonate.

Turlington's Balsam. Tincture Benzoin Compound.

⊕ TURPENTINE.

Terebinthina, N. F. Concrete oleoresin from *Pinus palustris* and other species of *Pinus* (Fam. *Pinaceæ*). Yellowish, opaque, sticky masses; characteristic odor and taste. Freely soluble in alcohol, ether, chloroform. Source of oil turpentine.

TURPENTINE, VENICE.

Terebinthina Laricis, N. F.; Larch Turpentine. Viscid oleoresin from *Larix europæa* (Fam. *Pinaceæ*). Yellowish or greenish, thick liquid; distinctive odor; bitter, characteristic taste. Soluble in alcohol, chloroform; insoluble in water. Rubefacient externally; Anticatharrhal internally. Dose: 3 to 5 grains (0.13 to 0.3 Gm.).

Turpeth Mineral. See Mercury Subsulphate Yellow.

UNGUENTUM CREDÉ. See under Collargol.

UNICORN ROOT. See Aletris.

UNICORN ROOT, FALSE. See Helonias.

UNNA'S DERMATOLOGICAL PASTES. See Pastes.

URANIUM NITRATE.

Uranii Nitras. $UO_2(NO_3)_2.6H_2O$. Light-yellow, odorless, bitter, astringent, slightly efflorescent crystals. 1 Gm. dissolves in 1.2 mls (Cc.) water; freely soluble in ether or alcohol. Used in diabetes and cancer. Average Dose: $\frac{1}{6}$ grain (0.01 Gm.). (See also Reagents [Part IV].)

Urea Apparatus, Squibb

For the estimation of urea in urine. Complete in box, with materials for making Solution Chlorinated Soda and full directions for use.

For those who prefer to employ Solution Sodium Hypobromite (rather than Solution Chlorinated Soda) as a reagent with this apparatus, we offer the materials for its manufacture, viz:

100 Cc. 500 Cc.

Solution Sodium Hydroxide (28.50%)

Solution Bromine (12.50%)

(These solutions mixed in equal proportions produce Solution Sodium Hypobromite.)

Urease, Squibb

10 Gm. vial, ; 0.1 Gm. Tablets, bottle of 100,

Soluble urea-splitting enzyme of the Jack Bean, compounded with potassium phosphates in proportion to produce the quickest and most complete activity according to the researches of Dr. D. D. Van Slyke. An improved agent for the rapid estimation of urea in urine, blood, spinal fluid, etc. Its urea-splitting power is greater than that of urease from the soya bean, and it contains less foreign protein in proportion to its enzymatic activity when tested by the absolute method of Van Slyke. Write for complete literature.

URITONE and UROTROPIN. Brands of Hexamethylenamine.

UVA URSI.

Uva Ursi; Bearberry Leaves. Dried leaves of *Arctostaphylos Uva-ursi* (Fam. *Ericaceæ*). Diuretic, Urinary Anticatarrhal. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

⊕ VALERIAN.

Valeriana. Dried rhizome and roots of *Valeriana officinalis* (Fam. *Valerianaceæ*). Odor unpleasant; taste camphoraceous, somewhat bitter. Used as Nerve Sedative, Antispasmodic; in hysteria and other nervous excitations. Average Dose: 30 grains (2 Gm.). (See also Tincture.)

VALERYLDIETHYLAMIDE. See Valyl.

VALIDOL.

Menthol Valerate with 30 percent. free menthol. Colorless, thick liquid; mild, pleasant odor; cooling, slightly bitter taste. Soluble readily in alcohol, ether, chloroform, or oils; insoluble in water. Nerve Sedative, Analgesic, Carminative. Dose: 10 to 20 drops.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Vallet's Mass. See Mass Ferrous Carbonate.

VALYL.

Valeryldiethylamide. Colorless liquid; pungent odor; burning, valerian-like taste. Soluble in about 25 parts water, easily in alcohol or ether. Nerve Sedative, Antineuralgic. **Dose:** 2 to 6 minims (0.13 to 0.4 mil [Cc.]).

VANILLA.

Vanilla, N. F.; Vanilla Bean. Cured, full-grown, unripe fruit of *Vanilla planifolia* (Fam. *Orchidaceæ*). Flavoring.

Vanillin, Squibb

bottle, oz.

Vanillinum. $C_8H_8O_3$. Methylprotocatechuic Aldehyde, obtained from vanilla, or synthetically. Occasionally used as Stimulant and Aphrodisiac, but chiefly as Flavoring. **Average Dose:** $\frac{1}{2}$ grain (0.03 Gm.).

VENICE TURPENTINE. See Turpentine, Venice.

VERATRINE.

Veratrina. Natural mixture of alkaloids from seed of sabadilla (*Asagraea officinalis*; Fam. *Liliaceæ*). White or grayish-white, amorphous, odorless, sternutatory powder; taste acrid, leaving tingling and numbness on tongue. 1 Gm. dissolves in 1760 mils (Cc.) water, 2.8 alcohol, 0.7 chloroform, 4.2 ether. Topical Anodyne; as oleate (2 percent.) or ointment (4 percent.). **Antidotes:** tannic acid, emetics; morphine with atropine hypodermically; demulcents; stimulants by mouth.

VERBENA.

Verbena, N. F.; Blue Vervain. Dried, overground portion of *Verbena hastata* (Fam. *Verbenaceæ*). Heavy odor; disagreeable, bitter taste. Expectorant, Diaphoretic, Tonic. **Average Dose:** 15 grains (1 Gm.).

Veratrum Viride, Squibb

Ground for Percolation

tin, lb.

Veratrum Viride; Green Hellebore; American Hellebore. Dried rhizome and roots of *Veratrum viride* (Fam. *Liliaceæ*). When powdered, it is strongly sternutatory; taste, bitterish acrid. Cardiac Depressant, Diaphoretic. **Average Dose:** 1 grain (0.065 Gm.). See also Fluidextract; Tincture.)

Vermilion. See Mercury Sulphide, Red.

VERONAL. See Barbital.

VERONAL-SODIUM. See Barbitol-Sodium.

VERVAIN. See Verbena.

VIBURNUM OPULUS.

Viburnum Opulus, N. F.; Cramp Bark. Dried bark of *Viburnum Opulus* var. *americanum* (Fam. *Caprifoliaceæ*). Strong odor; astringent bitter taste. Used as Uterine Antispasmodic and Tonic. Average Dose: 30 grains (2 Gm.). (See also Fluidextract; Tincture.)

VIBURNUM PRUNIFOLIUM.

Viburnum Prunifolium; Black Haw. Dried bark of *Viburnum prunifolium* or of *V. Lentago* (Fam. *Caprifoliaceæ*). Slight, peculiar odor; bitter, very astringent taste. In vogue as Uterine Sedative and Tonic, in dysmenorrhea and habitual abortion. Average Dose: 30 grains (2 Gm.). (See also Fluidextract.)

VIENNA CAUSTIC OR LIME. See Potassa with Lime.

VINEGAR, AROMATIC.

Acetum Aromaticum, N. F. Containing oils of lavender, rosemary, juniper, peppermint, cinnamon, lemon and clove, in alcohol, acetic acid and water. Cooling, stimulating application in fever; Condiment.

† VINEGAR OPIUM.

Acetum Opii, N. F.; Black Drop; Acetated Tincture Opium. About 10 percent. granulated opium, in acetic acid menstruum, with sugar and nutmeg. Anodyne, Antispasmodic. Average Dose: 8 minims (0.5 mil [Cc.]). Antidotes: potassium permanganate (2 grains in water), emetics; atropine or strychnine hypodermically; hot, strong coffee; exercise.

Vinegar Squill, Squibb

bottle, pint

Acetum Scillæ. 10 percent. squill, with dilute acetic acid. Yellow to reddish-brown liquid. Physiologically assayed according to U. S. P. and standardized; minimum lethal dose not greater than 0.006 mil (Cc.) per Gm. weight of frog. Expectorant, Diuretic. Average Dose: 15 minims (1 mil [Cc.]).

Vinegar Tarragon, Squibb

bottle, pint,

Prepared by macerating tarragon herb (*Artemisia Dracunculus*) in cider vinegar for three months. Used in place of cider vinegar in salad dressings, etc.

VIOFORM.

Iodochloroxyquinoline; Nioform. Greenish-yellow, nearly odorless, voluminous powder. Insoluble in ordinary solvents. Antiseptic Vulnery.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

Vitriol, Blue. See Copper Sulphate.

Vitriol, Green. See Iron Sulphate.

Vitriol, White. See Zinc Sulphate.

VLEMINCKX' LOTION OR SOLUTION. See Solution Sulphurated Lime.

Volumetric Solutions. See under Reagents (Part IV).

WAHOO. See Euonymus.

Warburg's Tincture. See Tincture Antiperiodic.

WASH. See Lotion.

WATER ALMOND BITTER.

Aqua Amygdalæ Amaræ. 0.1 volume percent. oil bitter almond. Cough Sedative; Vehicle. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

Water Ammonia. See Ammonia Water.

WATER ANISE.

Aqua Anisi. 0.2 volume percent. oil anise. Aromatic Carminative; Vehicle. **Average Dose:** 4 fluidrachms (15 mils [Cc.]).

⊕ **WATER CAMPHOR.**

Aqua Camphoræ. 0.8 percent. camphor. Nerve Stimulant, Antispasmodic; Vehicle for collyria. **Average Dose:** 2½ fluidrachms (10 mils [Cc.]).

⊕ **WATER CHLOROFORM.**

Aqua Chloroformi. About 1½ percent. chloroform. Carminative, Gastric Anodyne; Vehicle. **Average Dose:** 4 fluidrachms (15 mils [Cc.]).

⊕ **WATER CINNAMON.**

Aqua Cinnamomi. 0.2 volume percent. cinnamon. Carminative; Aromatic Vehicle. **Average Dose:** 4 fluidrachms (15 mils [Cc.]).

WATER CREOSOTE.

Aqua Creosoti. 1 vol. percent. creosote. Antiseptic, Antitubercular, Antizymotic; Dermic. **Average Dose:** 2½ fluidrachms (10 mils [Cc.]).

⊕ **WATER DISTILLED.**

Aqua Destillata. Water, H₂O, purified by distillation. Neutral; free from sulphate, chloride, calcium, metals, organic substances, and carbon dioxide.

WATER FENNEL.

Aqua Fœniculi. 0.2 vol. percent. oil fennel. Carminative; Vehicle. Average Dose: 4 fluidrachms (15 mils [Cc.]).

WATER HAMAMELIS.

Aqua Hamamelidis; Witch-Hazel Water; Distilled Extract Witch-Hazel. Saturated aqueous liquid obtained by distilling with steam or water, the bark, twigs or whole shrub of *Hamamelis virginiana* (Fam. *Hamamelidaceæ*), and adding 15 mils alcohol to each 85 mils distillate. Clear; colorless; characteristic odor and taste; sp. gr. 0.979 to 0.982. Cooling Astringent lotion.

Water Hydrogen Dioxide. See Solution Hydrogen Dioxide.

Water JAVELLE. See Solution Potassa Chlorinated.

Water LEAD. See Solution Lead Subacetate Diluted.

Water LIME. See Solution Calcium Hydroxide.

WATER ORANGE FLOWER.

Aqua Aurantii Florum. Equal volumes distilled water and stronger orange-flower water. Flavoring.

WATER ORANGE FLOWER, STRONGER.

Aqua Aurantii Florum Fortior. Water saturated with volatile oil fresh orange flowers, obtained by distilling fresh orange flowers with water.

⊕ WATER PEPPERMINT.

Aqua Menthæ Piperitæ. 0.2 volume percent. oil peppermint. Aromatic Carminative; Vehicle. Average Dose: 4 fluidrachms (15 mils [Cc.]).

⊕ WATER ROSE.

Aqua Rosæ. Equal volumes stronger rose water and distilled water. Flavoring, Perfume.

WATER ROSE, STRONGER.

Aqua Rosæ Fortior. Water saturated with volatile oil rose petals and distilled.

WATER SPEARMINT.

Aqua Menthæ Viridis. 0.2 volume percent. oil spearmint. Carminative. Average Dose: 4 fluidrachms (15 mils [Cc.]).

⊕ WAX, WHITE.

Cera Alba. Yellow wax bleached.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

⊕ WAX, YELLOW.

Cera Flava; Beeswax. Obtained by melting and purifying honey-comb of the bee (*Apis mellifera*). Soluble in chloroform, ether, oils; sparingly soluble in cold alcohol; insoluble in water.

WHITE PINE BARK.

Pinus Alba, N. F. Inner bark of *Pinus Strobis* (Fam. *Pinaceæ*). Expectorant. Average Dose: 30 grains (2 Gm.).

White Pine Compound, Squibb

Ground for Percolation tin, lb.

Mixture of ground White Pine Bark, Wild Cherry Bark, Spikenard Root, Balm of Gilead Buds, Sanguinaria Root and Sassafras Bark, in the proportions called for in N. F. formula for Syrup White Pine Compound.

White Precipitate. See Mercury Ammoniated.

⊕ Wild Cherry, Squibb

Ground for Percolation tin, lb.

Prunus Virginiana. Stem-bark of *Prunus serotina* (*Prunus virginiana*; Fam. *Rosaceæ*), collected in autumn, and carefully dried. Odor bitter-almond-like when macerated; taste astringent, aromatic and agreeably bitter. Sedative, Expectorant. Average Dose: 30 grains (2 Gm.). (See also Fluidextract; Syrup.)

WILD INDIGO. See Baptisia.

⊕ Wine Antimony, Squibb pint ; ¼ pint

Vinum Antimonii, N. F. About ¼ grain tartar emetic per fluid drachm, with sherry wine. Nauseant Expectorant. Average Dose: 15 minims (1 mil [Cc.]). Incompatible with alkalies and their carbonates, antipyrine, tannin, and vegetable infusions, decoctions or tinctures (cinchona, rhubarb, etc.).

• WINE BEEF.

Vinum Carnis, N. F.; Beef and Wine. 3 Gm. extract beef in 100 mils (Cc.), with syrup, alcohol, sherry wine, compound spirit orange and water. Nutrient. Average Dose: 2 fluidrachms (8 mils).

WINE BEEF AND IRON.

Vinum Carnis et Ferri, N. F.; Beef, Wine and Iron. Preceding product with addition of 4.6 grains iron and ammonium citrate per fluidounce. Nutrient, Hematinic. Average Dose: 2 fluidrachms (8 mils [Cc.]).

WINE CHALYBEATE. See Wine Iron.

WINE COLCHICUM ROOT.

Vinum Colchici Cormi, N. F. 40 Gm. colchicum corm per 100 mils (Cc.). Assays 0.126 to 0.154 Gm. colchicine in 100 mils. Antipodagric, Antineuralgic. Average Dose: 10 minims (0.6 mil).

Wine Colchicum Seed, Squibb pint ; ¼ pint

Vinum Colchici Seminis, N. F. 10 vol. percent. fluidextract colchicum seed, with sherry wine and a little added alcohol. Assays 0.036 to 0.044 Gm. colchicine in 100 mils (Cc.). Antipodagric, Antineuralgic. **Average Dose:** 30 minims (2 mils [Cc.]).

WINE IPECAC.

Vinum Ipecacuanhæ, N. F. 10 vol. percent. fluidextract ipecac, with sherry wine and alcohol. Assays 0.18 to 0.22 Gm. alkaloids in 100 mils (Cc.). Each fluidounce represents 46 grains drug. Expectorant, Stomachic. **Average Dose:** 15 minims (1 mil [Cc.]).

WINE IRON.

Vinum Ferri, N. F.; Chalybeate Wine. 4 percent. iron and ammonium citrate, with tincture sweet-orange peel, syrup and sherry wine. Mild Hematinic. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

WINE IRON, BITTER.

Vinum Ferri Amarum, N. F. Each fluidounce contains about 23 grains soluble iron and quinine citrate, with tincture sweet-orange peel, syrup and sherry wine. Bitter Tonic, Hematopoietic. **Average Dose:** 2 fluidrachms (8 mils [Cc.]).

WINE ORANGE COMPOUND.

Vinum Aurantii Compositum, N. F.; Compound Elixir Orange. From bitter orange peel, absinthium, menyantes, cascarilla, cinnamon, gentian and potassium carbonate, with sherry wine. Bitter; Aromatic Vehicle. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

WINE PEPSIN.

Vinum Pepsini, N. F. Each fluidounce contains about 7.8 grains pepsin, with glycerin, hydrochloric acid, alcohol and sherry wine. Gastric Digestive. **Average Dose:** 2 fluidrachms (8 mils [Cc.]). Discolors on keeping.

WINE RHUBARB COMPOUND.

Vinum Rhei Compositum, N. F.; Tincture Rhubarb Vinous, N. F. III. Each fluidounce contains 38.4 minims fluidextract rhubarb, 9.6 minims fluidextract bitter orange peel, and 38.4 minims tincture cardamom. Laxative, Stomachic. **Average Dose:** 1 fluidrachm (4 mils [Cc.]).

WINE, SHERRY.

Vinum Xericum, N. F. Obtained by fermenting juice of fresh ripe grapes freed from seeds and skins, and fortifying with pure grape brandy. Alcoholic content 16 to 24 percent. Sp. gr. 0.985 to 1.000.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Wine Tar, Squibb

pint

Vinum Picis, N. F. Contains about 10 percent. tar, or 46 grains per fluidounce, with alcohol and sherry wine. Stimulating Expectorant. Average Dose: 2 fluidrachms (8 mls [Cc.]).

WINE WHITE ASH.

Vinum Fraxini, N. F. 50 Gm. white ash bark per 100 mls (Cc.) mixture of sherry wine (7) and alcohol (1). Used as Tonic, Purgative. Average Dose: 1 fluidrachm (4 mls).

WINE WILD CHERRY.

Vinum Pruni Virginianæ, N. F. 1 fluidounce represents about 114 grains wild cherry, with sherry wine and a little alcohol. Bitter Tonic, Pectoral Sedative; in weak stomach, anorexia, bronchial catarrh, etc. Average Dose: 1 fluidrachm (4 mls [Cc.]).

WINE WILD CHERRY, FERRATED.

Vinum Pruni Virginianæ Ferratum, N. F. Contains 8 volume percent. tincture iron citro-chloride, in wine wild cherry. Bitter and Chalybeate Tonic. Average Dose: 1 fluidrachm (4 mls [Cc.]).

WITCH-HAZEL LEAVES.**Wool=Fat (Anhydrous), Squibb**

tin, lb.

Adeps Lanæ; Anhydrous Lanolin. Purified fat of sheep's wool, freed from water. Of faint, peculiar odor; light-yellow color. Soluble readily in ether or chloroform, sparingly in alcohol; insoluble in water, but takes up several times its weight of water. Ointment Base.

⊕ Wool=Fat Hydrated, Squibb

tin, lb.

Adeps Lanæ Hydrosus; Lanolin. Anhydrous wool-fat mixed with 25 to 30 percent. of water. Ointment Base, Emollient.

WORMWOOD. See Absinthium.**XANTHOXYLUM.**

Xanthoxylum. Dried bark of *Xanthoxylum americanum* or of *X. Clava-Herculis* (Fam. *Rutaceæ*). Inodorous; taste very pungent and bitterish. Bitter like gentian. Average Dose: 30 grains (2 Gm.).

YEAST COMPRESSED.

Cerevisiæ Fermentatum Compressum, N. F.; Beer Yeast. Moist, living cells of *Saccharomyces cerevisiæ* or other species of *Saccharomyces* (Fam. *Saccharomycetaceæ*), combined with a starchy or absorbent base. Used in making fermented milk; also as Antipyric in boils, etc.

Yellow Bark. See Cinchona.

YELLOW DOCK. See *Rumex*.

YELLOW JASMINE. See *Gelsemium*.

YELLOW WASH. See *Lotion, Yellow*.

Yerba Santa. See *Eriodictyon*.

ZEAL.

Zea, N. F. Fresh styles and stigmas of *Zea Mays* (Fam. *Gramineæ*). Used in inflammatory bladder troubles. **Average Dose:** 60 grains (4 Gm.). (See also *Fluidextract*.)

ZEDOARY.

Zedoaria, N. F. Dried rhizome of *Curcuma Zedoaria* (Fam. *Zingiberaceæ*). Stomachic, Carminative; like ginger. **Average Dose:** 15 grains (1 Gm.).

Zinc, Reagent. See *Reagents (Part IV)*.

⊕ **Zinc Acetate, Squibb** tin ; ¼ lb.

Zinci Acetas. $\text{Zn}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 2\text{H}_2\text{O}$. White, lustrous plates; faint acetous odor; astringent, metallic taste. On exposure it effloresces and loses acid. 1 Gm. dissolves in 2.3 mils (Cc.) water, 30 alcohol. Astringent, Antiseptic. Very rarely used internally. Employed externally (in gonorrhea, conjunctivitis, etc.) in 2 to 5:1000 solution. **Average Dose:** 2 grains (0.13 Gm.). Incompatible with alkali carbonates, sodium borate, soluble sulphates, vegetable astringent infusions, decoctions or tinctures. **Antidotes**, of zinc salts in general; alkali carbonates, or tannic acid, emetics; stimulants.

Zinc Bromide, Squibb g. s. bottle, oz.

Zinci Bromidum, U. S. P. VIIIth, Rev. ZnBr_2 . White, odorless, very deliquescent powder, of sharp, saline, metallic taste. Soluble readily in water, alcohol, ether or ammonia. Nerve Sedative, Antispasmodic; chiefly in epilepsy and chorea. **Average Dose:** 2 grains (0.13 Gm.). Incompatible with acids, solutions of alkaloidal salts, salts of heavy metals. Keep well stoppered, in dry place.

Zinc Carbonate Precipitated, Squibb carton, lb.

Zinci Carbonas Præcipitatus. Yields upon ignition not less than 68 percent. zinc oxide. Impalpable, odorless, white, tasteless powder. Insoluble in ordinary solvents. Cutaneous Astringent Protective; in intertrigo, abrasions, etc.; for face powders, etc.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

⊕ **Zinc Chloride, Squibb**

* Granular

g. s. bot. ¼ lb. ; oz.

Fused

g. s. bot. ¼ lb. ; oz.

Zinci Chloridum, ZnCl_2 . White, odorless, very deliquescent, granular powder; or fused masses; astringent, metallic taste in solution; very caustic when tasted pure. 1 Gm. dissolves in 0.25 mil (Cc.) water, 1.3 alcohol; freely soluble in glycerin. Escharotic, Antiseptic, Astringent. Applied as caustic in substance, 50 percent. solution or 20 to 40 percent. paste; as astringent, in 0.1 to 0.5 percent. solution. Incompatible with sodium borate, alkali carbonates, etc. **Antidotes:** demulcents, then dilute solution of potassium or of sodium carbonate; emetics hypodermically; stimulants. Keep securely stoppered, in dry place.

Zinc Iodide, Squibb

g. s. bottle, oz.

Zinci Iodidum, U. S. P. VIIIth, Rev. ZnI_2 . White, odorless, very deliquescent powder, of sharp, saline, metallic taste, and turning brown on exposure to light. Readily soluble in water, alcohol, ether. Alterative, Antiseptic; in ulcerated tonsils, gonorrhea, etc.; internally in scrofula, syphilis, etc. Also used as Reagent. **Average Dose:** 1 grain (0.065 Gm.). Keep well stoppered, in dry place, protected against light.

⊕ **Zinc Oxide Heavy, Squibb**

tin lb. ; ¼ lb.

Zinci Oxidum; Flowers of Zinc. ZnO . White, odorless, tasteless powder. Insoluble in ordinary solvents. Drying Antiseptic, Astringent Dermic and Protective. Zinc oxide absorbs carbon dioxide from air; hence keep container well closed.

⊕ **Zinc Oxide Light, Squibb**

tin lb. ; ¼ lb.

1-oz. sifter-top tins, per doz.

A special Squibb product. Of exceptional purity; free from lead, and stands all other U. S. P. tests; very bulky.

Zinc Phenolsulphonate, Squibb

bottle, oz.

Zinci Phenolsulphonas; Zinc Sulphocarbolate. $\text{Zn}(\text{C}_6\text{H}_5\text{O}_4\text{-S})_2 \cdot 8\text{H}_2\text{O}$. Of greatest purity and of correct chemical constitution. Colorless, odorless crystals, of astringent, metallic taste; efflorescent. 1 Gm. dissolves in 1.6 mils (Cc.) water, 1.8 alcohol. Antiseptic, Astringent, externally, in ½ to 1 percent. solution, in gonorrhea, ulcers, etc.; used largely as Intestinal Antiseptic. **Average Dose:** 2 grains (0.13 Gm.), as tablets, usually in combination with other phenolsulphonates. (See also Tablets Sulphocarbulates Combined [Part II].)

⊕ **Zinc Stearate, Squibb**

bottle, lb. ; ¼ lb. ; oz.

oz. sifter-top cans, Scented or Unscented, per doz.

Zinci Stearas. Fine, white, tasteless powder; faint, fatty odor. Yields 13 to 15.5 percent. zinc oxide. Insoluble in water, alcohol or ether. Vulnerary, Antiseptic; as dusting powder, snuff, etc., pure or attenuated.

⊕ **Zinc Sulphate, Squibb** tin, lb. ; ¼ lb.

Zinci Sulphas; White Vitriol; Zinc Vitriol. $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$. A highly purified salt. White granular powder; inodorous, very efflorescent; astringent, metallic taste. 1 Gm. dissolves in 0.6 mil (Cc.) water, 2.5 glycerin; insoluble in alcohol. Astringent, Antiseptic; Emetic. Externally chiefly in 0.5 to 2 percent. solutions and 5 to 10 percent. ointments. **Average Dose:** emetic, 15 grains (1 Gm.), in lukewarm water. Incompatible with alkali carbonates, sodium borate, lead acetate, tannin, vegetable astringents, etc. As Zinc Sulphate Granulated is very efflorescent in dry air, container should be kept well closed and in cool place. (See also Reagents [Part IV]; Tablets [Part II].)

Zinc Sulphate Dried, Squibb bottle, lb. ; ¼ lb.

$\text{ZnSO}_4 \cdot 2\text{H}_2\text{O}$. White powder. Soluble freely in water. Action, same as preceding; but as this dried salt contains much less water of crystallization than the granular (or crystalline) sulphate it is more active. **Ordinary Dose:** as emetic, 10 grains (0.65 Gm.)

Zinc Sulphocarbolate. See Zinc Phenolsulphonate.

Zinc Valerate, Squibb bottle, oz.

Zinci Valeras; Zinc Valerianate. White, pearly scales; odor of valeric acid; sweetish, astringent, metallic taste. 1 Gm. dissolves almost completely in 70 mils (Cc.) water, 22 alcohol. Loses valeric acid on exposure and becomes less soluble. Used as Nervè Sedative. **Average Dose:** 2 grains (0.13 Gm.).

Zinc Vitriol. See Zinc Sulphate.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

PART II

Medicinal Tablets

SQUIBB'S TABLETS are prepared with the greatest care and skill, contain the Squibb products in their full therapeutic efficiency, and meet in all respects the high standard of this house for purity, uniformity and reliability.

In accordance with the ethical principles of the American Medical Association, only *pharmaceutical titles* are used, not disease names or designations suggestive of therapeutic uses.

The cut below shows the shape of a **Tablet Triturate**, in contradistinction to a **Compressed Tablet**. Where a formula is carried in stock in more than one shape, mention of this fact is made in a footnote; and on orders where no specification is given, the form regularly listed will be supplied.

COMPRESSED TABLETS

TABLET TRITURATES

On orders for Tablets made both plain and coated, the uncoated will be supplied unless otherwise specified.

On Tablets listed in coated form the coating is very soluble, presents no hindrance to disintegration, effectively masks the unpleasant taste of the ingredients, and prevents the loss of volatile constituents.

Those Tablets which contain insoluble medicaments, such as acetanilid, the bismuth salts, phenacetin, salol, and the like, may be relied upon to disintegrate as soon as they reach the stomach and to exhibit full therapeutic activity, their formulas being scientifically constructed.

C. T. in this list stands for Compressed Tablets; C. C. T. for Chocolate Coated Tablets; T. T. for Tablet Triturates; G. C. T. for Green Coated Tablets; P. C. T. for Pink Coated Tablets; R. C. T. for Red Coated Tablets; W. C. T. for White Coated Tablets.

A † means that the product is covered by the Harrison Anti-narcotic Law, and therefore must be ordered on the official blank.

A * indicates that the item is also supplied as COMPRESSED Tablets. However unless otherwise specified, T. T. will be supplied.

Tablets Absorbent Digestive. See Tablets Papain and Charcoal Compound.

Tablets Absorbent Dyspepsia. See Tablets Pepsin and Charcoal Compound.

Tablets Acetanilid 1 gr., Squibb

Per 1000 Per 500 Per 100

T. T.

Antipyretic and Analgesic. Acetanilid is prompt and certain in its action. As an antipyretic, it is used in sthenic fevers, with good results in robust patients, but in prolonged pyrexia the cold bath is less liable to lead to complications. As an analgesic, it is deemed a valuable remedy in relieving pain of a reflex or spasmodic character. Combined with caffeine, it is a favorite remedy in migraine and neuralgic pains generally. (See Tablets Acetanilid Compound.) Occasionally, through incautious administration or weak heart, marked cardiac depression with cyanosis follows; should this occur, it is advised to place the patient in a recumbent position, apply artificial heat and give stimulants. **Dose:** for children, 1 tablet every two or three hours; for adults, 1 to 5 tablets every two or three hours for not more than three doses.

Tablets Acetanilid 2 gr., Squibb

Per 1000 Per 500 Per 100

C. T.

Analgesic and Antipyretic. **Dose:** 1 to 2 tablets, every hour until three or four have been taken.

Tablets Acetanilid 5 gr., Squibb

Per 1000 Per 500 Per 100

C. T.

Analgesic and Antipyretic. **Dose:** 1 tablet every two hours for not more than three doses.

Tablets Acetanilid and Ammonium Salicylate Compound. See Tablets Ammon, Salicylate and Acetanilid Compound.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

† **Tablets Acetanilid and Bromide Compound, Squibb**
(Neuralgic Headache, Dr. Myers)

C. T.		Per 1000	Per 500	Per 100
Acetanilid	1 gr.	} These tablets are used in migraine, headaches due to congestion or to irritation of the sensory nerves and neuralgic pains in general.		
Sodium Bromide	5 gr.			
Morphine Sulphate	$\frac{1}{50}$ gr.			
Caffeine Citrated	$\frac{1}{2}$ gr.			
Extract Hyoscyamus	$\frac{1}{2}$ gr.			

Dose: 1 tablet, repeated in half an hour if necessary, but not oftener than four times in succession. (NOTE.—In the use of these tablets the possible formation of the morphine habit should be guarded against.)

Tablets Acetanilid and Caffeine Compound, Squibb
(Dr. Hubbard)

C. T.		Per 1000	Per 500	Per 100
Acetanilid	$3\frac{1}{2}$ gr.	} These tablets are employed as an analgesic and nerve sedative, chiefly in nervous headache. Dose: 2 tablets with a		
Caffeine	1 gr.			
Sodium Bromide	$7\frac{1}{2}$ gr.			

glass of water, repeated in four hours if required.

Tablets Acetanilid and Cannabis Compound, Squibb
(Neuralgic Improved)

C. T.		Per 1000	Per 500	Per 100
Acetanilid	2 gr.	} This combination of analgesics and nervines has been employed with reputed success in the treatment of migraine and various other types of neuralgia, and it is said to be particularly useful in		
Ext. Cannabis	$\frac{1}{4}$ gr.			
Quinine Sulphate	2 gr.			
Ext. Hyoscyamus	$\frac{1}{2}$ gr.			
Acid Arsenous	$\frac{1}{100}$ gr.			
Strychnine Sulphate	$\frac{1}{60}$ gr.			

cases of a periodical character, whether due to malarial infection or to other causes. Care should be taken in those patients who do not tolerate acetanilid well or who show an idiosyncrasy toward cannabis. Dose: 1 tablet, repeated in half an hour if required, then every two or three hours until the condition is relieved.

Tablets Acetanilid and Gelsemin Compound, Squibb

C. T.		Per 1000	Per 500	Per 100
Acetanilid	$2\frac{1}{2}$ gr.	} Antipyretic, Analgesic and Depressant. The well-known action of acetanilid is here augmented by gelsemin. The		
Gelsemin	$\frac{1}{10}$ gr.			
Caffeine Citrated	1 gr.			

combination has been used with reputed success in neuralgia, pleurisy and pneumonia. In dysmenorrhea and ovarian neuralgia it is credited with good results, but is deemed especially useful in neuralgia affecting the dental branches of the fifth nerve. It should be cautiously administered, as certain patients show a peculiar idiosyncrasy to its depressant effects. Dose: 1 tablet every 2 or 3 hours, for not more than three doses.

† Tablets Acetanilid and Morphine Compound, Squibb
(Analgesic Compound)

C. T.	Per 1000	Per 500	Per 100
Acetanilid	2 ³ / ₁₁ gr. }	Our Tablets Acetanilid and Sodium Salicylate Compound have generally been found useful in relieving pain of a reflex or spasmodic character. In some cases, however, physicians have found it advisable to add small doses of morphine sulphate, which increase the anodyne effect, and a little capsicum, to stimulate the mucous membrane of the stomach. Dose: 1 or 2 tablets with water every hour or two until relieved. (NOTE.—These tablets should be used cautiously, and the possibility of the formation of the morphine habit guarded against.)	
Morphine Sulphate	1 ¹ / ₂₀ gr. }		
Sodium Salicylate	1 ¹³ / ₂₂ gr. }		
Caffeine	5 ⁵ / ₂₂ gr. }		
Sodium Bicarbonate	10 ¹⁰ / ₁₁ gr. }		
Capsicum	1 ¹ / ₂₀ gr. }		

able to add small doses of morphine sulphate, which increase the anodyne effect, and a little capsicum, to stimulate the mucous membrane of the stomach. **Dose:** 1 or 2 tablets with water every hour or two until relieved. (NOTE.—These tablets should be used cautiously, and the possibility of the formation of the morphine habit guarded against.)

Tablets Acetanilid and Quinine, Squibb

C. T.	Per 1000	Per 500	Per 100
Acetanilid	2 ¹ / ₂ gr. }	This formula has been found useful in the treatment of reflex pains of neuralgic origin in sthenic patients where there is no cardiac weakness. It possesses marked antipyretic and analgesic properties, and good results have been obtained with it in cases of migraine, influenza and other painful conditions. We call particular attention to the rapidity with which these tablets and similar combinations here listed disintegrate in water or in fluids of the body, thereby minimizing any possibility of cumulative action, as each dose promptly produces its effect. Dose: 1 tablet with water every two hours for three or four doses, then every four hours.	
Quinine Sulphate	2 ¹ / ₂ gr. }		

in sthenic patients where there is no cardiac weakness. It possesses marked antipyretic and analgesic properties, and good results have been obtained with it in cases of migraine, influenza and other painful conditions. We call particular attention to the rapidity with which these tablets and similar combinations here listed disintegrate in water or in fluids of the body, thereby minimizing any possibility of cumulative action, as each dose promptly produces its effect. **Dose:** 1 tablet with water every two hours for three or four doses, then every four hours.

† Tablets Acetanilid and Quinine Compound, Squibb

C. T.	Per 1000	Per 500	Per 100
Chocolate-coated (C. C. T.)			
Acetanilid	2 gr. }	This is a combination of remedies that has been extensively used in the treatment of grip and the early stages of colds. The usual precautions against the use of acetanilid must be observed in its administration, although the depressing effect is somewhat guarded against by the camphor and quinine. Its action as a sudorific will be greatly increased by hot drinks during the treatment. Dose: 1 tablet every 2 hours, but for not more than three consecutive doses.	
Quinine Sulphate	1 ¹ / ₂ gr. }		
Camphor	1 ¹ / ₄ gr. }		
Capsicum	1 ¹ / ₄ gr. }		
Podophyllin	1 ¹ / ₈₀ gr. }		
Aconite. Root	1 ¹ / ₂₀ gr. }		
Morphine Sulphate	1 ¹ / ₁₂₀ gr. }		

depressing effect is somewhat guarded against by the camphor and quinine. Its action as a sudorific will be greatly increased by hot drinks during the treatment. **Dose:** 1 tablet every 2 hours, but for not more than three consecutive doses.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

Tablets Acetanilid and Salol, Squibb

C. T.	Per 1000	Per 500	Per 100
Acetanilid	21 $\frac{1}{2}$ gr. }	The acetanilid acts as an Analgesic and Antipyretic; the salol as an Antirheumatic	
Salol	21 $\frac{1}{2}$ gr. }		

and Intestinal Antiseptic. Together they are commonly used in acute rheumatism, gouty attacks, myalgia, sciatica and neuralgic pains of rheumatic origin. In the early stage of grip and sudden colds they have been found to relieve pain and muscular soreness promptly, and usually without bad after-effect. Great care is observed in all of Squibb's tablets to prevent decomposition, and to present the medicaments in their natural activity, unchanged by the process of manufacture; hence they can be relied on for prompt and uniform action. **Dose:** 1 tablet every hour or two until pain and fever are relieved. **Caution:** Tablets containing salol should not be exposed to direct sunlight or kept in a warm place, as the chemical melts at about 106° F.

Tablets Acetanilid and Sodium Salicylate Compound, Squibb
(Analgesic No. 2)

C. T.	Per 1000	Per 500	Per 100
Acetanilid	21 $\frac{1}{2}$ gr. }	This is a slight modification of the following formula, sodium salicylate being substituted for the strontium salt. The indi- cations for its use and the dose are the same as those of the next combination.	
Sodium Salicylate	13 $\frac{3}{4}$ gr. }		
Caffeine	1 $\frac{1}{4}$ gr. }		
Sodium Bicarbonate	1 gr. }

Tablets Acetphenetidin 1gr., Squibb

(Phenacetin) Per 1000 Per 500 Per 100

T. T.

Acetphenetidin is chemically and physiologically identical with Phenacetin. It reduces fever, allays pain and is widely used in headache, neuralgia and reflex pains generally. Although regarded as one of the safest remedies of its kind, occasionally it causes cardiac depression with cyanosis. Should this occur, the patient is placed in a recumbent position, stimulants are administered, and, if necessary, artificial heat applied. Tablets Acetphenetidin Squibb disintegrate more quickly than cachets, capsules, or pills, and they are more convenient than powders. **Dose** (for children): 1 or 2 tablets every two or three hours.

Tablets Acetphenetidin 2 gr., Squibb

(Phenacetin) Per 1000 Per 500 Per 100

C. T.**Dose:** 1 or 2 tablets every two or three hours.**Tablets Acetphenetidin 5 gr., Squibb**

(Phenacetin) Per 1000 Per 500 Per 100

C. T.

Dose: 1 to 3 tablets with water, repeated as necessary. In weak heart, brandy or whisky is usually administered if signs of depression occur.

Tablets Acetphenetidin and Quinine, Squibb

(Phenacetin and Quinine) Per 1000 Per 500 Per 100

C. T.

Acetphenetidin 2 $\frac{1}{2}$ gr. } This combination is similar in
Quinine Sulphate 2 $\frac{1}{2}$ gr. } therapeutic action to Tablets
Acetanilid and Quinine. How-
ever, acetphenetidin is generally regarded as being less liable
than acetanilid to cause cardiac depression while fully as effi-
cient. **Dose:** 1 or two tablets repeated in an hour if neces-
sary, then at intervals of three or four hours until relieved.

Tablets Acetphenetidin and Salol. See Tablets Salol and
Acetphenetidin.

Tablets Acid Acetylsalicylic 5 gr., Squibb

(Aspirin) Per 1000 Per 500 Per 100 Per 25

C. T.

These tablets are carefully made in order to avoid decompo-
sition of the chemical during manufacture. They disintegrate
at once in water, and are free from any acetic odor (indicative
of decomposition). They are used as an Antirheumatic, In-
testinal Antiseptic and Analgesic, in the same classes of cases
in which salicylic acid and the salicylates are indicated. **Dose:**
1 to 4 tablets with water, several times a day. Keep the bottle
well stoppered and in a dry place.

*** Tablets Acid Arsenous 1/100 gr., Squibb**

Per 1000 Per 500 Per 100

T. T.

Acid arsenous affects the blood, the nerves and the skin. Under
its use nutrition generally improves, bodily weight increases, and
the skin becomes soft and smooth. It thus acts as an Alterative
and Tonic, and is employed in anemia, malarial cachexia,
obstinate skin diseases, neuralgia and in controlling the nervous
symptoms in epilepsy and chorea. Its use creates a tolerance,
yet it is an active poison and should be administered with cau-
tion. In case of reddening of the eyelids or pain or fulness
of the stomach, it is advised to discontinue its use until these
symptoms abate, and then resume it. **Dose:** 1 tablet after each
meal, increasing gradually and cautiously until the desired
effect is obtained.

*** Tablets Acid Arsenous 1/30 gr., Squibb**

T. T. Per 1000 Per 500 Per 100

Dose: 1 tablet three times a day, after meals, in skin diseases,
neuralgia, epilepsy, chorea, etc., and as a tonic in debility and
malarial cachexia.

Squibb's Tablets are made from the Squibb quality of ingredients
and by improved processes that insure accurate dosage and
rapid and complete disintegration or solution in the system,
hence prompt and full therapeutic effect. Specify SQUIBB'S.

† Tablets Acid Benzoic and Belladonna Compound, Squibb

(Throat, Dr. Quinlan)

C. T.	Per 1000	Per 500	Per 100
Acid Benzoic	1/5 gr.		
Tr. Bellad. U.S.P. '90	1 min.		
Paregoric	10 min.		
Extract Licorice	q. s.		

These tablets are employed in irritated and congested conditions of the pharynx and larynx, where loss of voice and cough are prominent symptoms.

They are palatable and do not usually interfere with digestion unless they are taken in excessive quantities or for prolonged periods. **Dose:** 1 tablet allowed to dissolve on the tongue every two to four hours.

Tablets Acid Boric 1 gr., Squibb

(For Urine Preserving)

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

These tablets are made without sugar or any other base, and consist wholly of the Squibb quality of boric acid. They are designed for use in preserving specimens of urine intended for analysis, and are employed and recommended for this purpose by the medical staff of many insurance companies. In winter, 1 tablet added to 1 fluidounce of urine is ordinarily sufficient to preserve it, but in warm weather 3 tablets are usually required for each fluidounce of urine.

Tablets Acid Boric 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Employed as an Intestinal and Vesical Antiseptic, in septic and catarrhal inflammatory conditions of the digestive and genito-urinary organs. In ammoniacal cystitis the internal administration of boric acid usually gives prompt relief, when employed in connection with irrigation of the bladder; in delayed digestion with fermentation of food and diarrhea, it is also used for its mild antiseptic properties with good results. These tablets are prepared for internal administration, but they may be used also for making antiseptic solutions; they break up quickly in water, and yield a perfectly clear solution. **Dose:** 1 to 3 tablets three or four times daily.

Tablets Acid Boric and Buchu Compound, Squibb

(Cystitis)

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Acid Boric	2 gr.	} Boric acid prevents fermentation of urine. Potassium bicarbonate neutralizes excessive acidity. Buchu acts as a stimulant to the mucous membranes of the genito-urinary organs, and in combination with dog-grass, cornsilk and hydrangea, is said to cause an increased flow of urine and to lessen the pain and frequent desire to urinate. Atropine acts as
Extract Buchu	1 gr.	
Potassium Bicarbonate	2 gr.	
Extract Dog-Grass	1 gr.	
Extract Cornsilk	1/2 gr.	
Extract Hydrangea	1/2 gr.	
Atropine Sulphate	1/500 gr.	

hydrangea, is said to cause an increased flow of urine and to lessen the pain and frequent desire to urinate. Atropine acts as

Tablets Acid Boric and Buchu Compound, Squibb
(Continued)

an antispasmodic. These tablets are employed in cystitis, as well as in gonorrhea. **Dose:** 1 tablet every three hours, between meals, with a large glass of water.

Tablets Acid Boric and Zinc Sulphate, Squibb

C. T.	Per 1000	Per 500	Per 100
Acid Boric	5 gr. }	These tablets will be found very convenient for use in ophthalmic and genito-urinary work. They disintegrate rapidly and yield a perfectly clear solution. An Antiseptic and mildly Astringent solution may be made by dissolving 2 to 4 tablets in 1 fluidounce of sterile water. Hot water hastens solution. Keep the bottle well-corked. Dispense in glass.	
Zinc Sulphate	1/4 gr. }		

Tablets Acid Salicylic and Colchicum Compound, Squibb
(Antirheumatic No. 2)

C. T.	Per 1000	Per 500	Per 100
Acid Salicylic	3 gr. }	The acid salicylic and sodium bicarbonate in these tablets have not interacted, but do so in the system, or when placed into water, with the production of nascent sodium salicylate. In dispensing these tablets if the effervescent nature of the mixture is deemed of any importance, they should be put up in glass only. Dose: 1 tablet after each meal and at bedtime in chronic cases; more frequently in acute cases.	
Wine Colchicum Seed 1 min.	1 min. }		
Sodium Bicarbonate	2 1/2 gr. }		

Tablets Aconite Fluidextract 1 min., Squibb

T. T.	Per 1000	Per 500	Per 100
Aconite is used to control inflammation with high arterial tension, and to reduce fever. It quiets the heart, reduces the force and frequency of the pulse, lessens the number of respirations, increases the action of the skin, and allays restlessness. In the acute attacks of sthenic fevers, tonsillitis, ulcerative sore throat and sudden colds, it is regarded as a valuable and reliable remedy, but it must be used with caution. In overdoses it is an active poison. Tablets Aconite Squibb represent the full potency of the best German aconite root, carefully assayed and standardized. Dose: 1 tablet dissolved in ten (10) tablespoonfuls of water and 1 tablespoonful given every hour until symptoms improve, stirring carefully before each dose. For the convenience of physicians who are accustomed to use Tincture Aconite in place of the fluidextract, we would state that the latter is ten times stronger than the present official tincture. One tablet of Fluidextract Aconite 1 minim Squibb dissolved in 10 teaspoonfuls of water would represent the aconite strength of 10 minims of the tincture; of this, each teaspoonful would be equivalent to 1 minim of Tincture Aconite.			

This house supplies only one quality of each product: that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

*** Tablets Aconite and Belladonna, Squibb**

T. T.	Per 1000	Per 500	Per 100
Tr. Aconite U.S.P.'90 $\frac{1}{2}$ min. }	The recognized action of belladonna in supporting the heart and stimulating the respiratory centers is here taken advantage of to lessen the depressing effect of the aconite. Together the two remedies should make an excellent combination in the treatment of inflammatory conditions, with rapid pulse, hurried respiration and fever. Prompt results usually follow their administration in sore throat and in fevers associated with bronchial inflammation. Dose: for children, 1 tablet dissolved in 10 teaspoonfuls of water, and given in teaspoonful doses every twenty minutes until fever abates; for adults, 1 tablet every hour.

soreness, and reduces the inflammation and fever. Belladonna lessens its depressant effect. Bryonia acts as a stimulant to the mucous membrane. Red iodide of mercury reduces the swelling and inflammation. **Dose:** 1 tablet, on the tongue, every twenty minutes for three doses, then every half hour for two doses; afterwards at hourly intervals until the pain and inflammation are relieved.

Tablets Aconitine 1/500 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
Aconitine is used for neuralgic and sciatic pains, and is considered especially useful in trifacial neuralgia. Some patients show an idiosyncrasy to its use, and it should therefore be given cautiously, more particularly where weak heart exists, beginning with the smaller dose and gradually increasing until the systemic effect is observed. Dose: 1 tablet every three or four hours until effective.			

Tablets Agaricin 1/10 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
Agaricin (Agaricic Acid) appears to act directly upon the sweat glands and not through the nerve centers. It has been used for the excessive sweating of gouty patients, but it is principally employed to control night sweats in phthisis. The action of agaricin is slow, four or five hours elapsing before its effects are apparent; hence the dose should be timed accordingly. Dose: 1 tablet, after supper, repeated at bedtime if required.			

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Tablets Ammonium Bromide 5 gr., Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

C. T.

As is known, ammonium bromide efficiently acts as a Sedative in nervous excitement, whether caused by irritation of the brain, the sexual system or the spinal cord; it allays reflex irritability. It is used in epilepsy, mania, sexual excitement, seasickness, sleeplessness from overwork or worry and in various phases of nervous exaltation. It is believed to be less depressing than the sodium or potassium salt, yet, on account of its pungent and disagreeable taste, it is not so frequently employed. Long-continued use often causes an acne-like eruption and a depressed mental condition; but these symptoms usually disappear upon withdrawal of the medicine. **Dose:** 1 to 3 tablets, with water, repeated in an hour or two if required.

Tablets Ammonium Chloride 3 gr., Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

C. T.

Ammonium chloride is a stimulant expectorant, and is useful in bronchial catarrhs where the secretion is viscid, tenacious and difficult to dislodge, and also in intestinal catarrh, catarrhal jaundice and in certain forms of neuralgia. As a bronchial stimulant it is usually combined with other remedies, and usually given with some demulcent, as extract licorice, which modifies its unpleasant taste. **Dose:** as a bronchial stimulant, 1 or 2 tablets every two or three hours, allowed to dissolve in the mouth or taken with a wineglass of water or milk. For intestinal catarrh and neuralgia, 5 tablets dissolved in a wineglass of water, every three or four hours.

Tablets Ammonium Chloride 5 gr., Squibb

Fluidextract Ipecac	1/5 min.		
Tr. Belladonna	1/5 min.		
Licorice			
Oil Anise	āā. q. s.		

The addition of ammonium chloride and ipecac serves to produce an increased secretion from the bronchial mucous membrane. Belladonna, in addition to its anti-spasmodic effect, acts as a respiratory stimulant. The oil

anise and licorice make the tablets palatable, and hence they are readily taken by children. **Dose:** for young children, a tablet may be dissolved in water before administering and given at hourly intervals until relieved; older children take 1 or more tablets at a dose. The bottle should be kept well corked and in a dry place. The possibility of the formation of the morphine habit should be borne in mind, when prescribing these tablets, and guarded against.

† **Tablets Ammonium Salicylate and Acetanilid Compound, Squibb**

C. T.	Per 1000	Per 500	Per 100
Ammonium Salicylate	2 gr.		
Acetanilid	1 1/2 gr.		
Dover's Powder	1 1/2 gr.		
Camphor	1/2 gr.		
Caffeine	1 gr.		

This formula is used in the early stages of coryza and grip. It usually acts promptly, allaying pain, controlling the febrile symptoms, and, if taken early enough, frequently

aborting an attack. **Dose:** 1 or 2 tablets every two or three hours, with water.

Tablets Antimony and Ipecac, Squibb (Dr. Fowler)

T. T.	Per 1000	Per 500	Per 100
Tartar Emetic	$\frac{1}{100}$ gr. }	Tartar emetic in small and repeated doses acts as an Expectorant and Diaphoretic;	
Ipecac	$\frac{1}{100}$ gr. }		

in larger quantities it causes nausea, vomiting and great prostration. It is deemed useful in the early stage of bronchitis before the secretion is well established. In combination with ipecac it is regarded as an excellent remedy in acute affections of the bronchi with hard, painful cough, deficient secretion and fever. **Dose:** 1 tablet every hour or two, stopping the remedy on the appearance of nausea.

Tablets Antimony and Ipecac No. 2, Squibb

C. T.	Per 1000	Per 500	Per 100
Tartar Emetic	$\frac{1}{100}$ gr. }	This formula is a modification of the prescription of Dr. Fowler; it contains a larger	
Ipecac	$\frac{1}{4}$ gr. }		

proportion of ipecac, which increases the expectorant action without producing subsequent depression. It is indicated in bronchial congestion with fever, where the cough is hard and painful and the secretion scanty. **Dose:** 1 tablet every hour or two as required.

Tablets Antipyrine 1 gr., Squibb

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Pains of a reflex or spasmodic character as seen in locomotor ataxia, migraine, and neuralgia are commonly relieved by antipyrine. Good results have also been obtained in asthma and in whooping-cough. Its antipyretic properties are well known, but it should be cautiously used. (See note under Tablets Acetanilid 1 gr.) **Dose:** for children, 1 tablet every hour until temperature falls, or pain is relieved; for whooping-cough 1 tablet every two hours.

Tablets Antipyrine 5 gr., Squibb

Per 1000 Per 500 Per 100

C. T.

Dose: as an Antipyretic, 1 tablet every two or three hours while fever is high; as an Analgesic, 1 every hour for three doses, or 3 at one dose, depending upon the condition.

† Tablets Antipyrine and Heroin Compound, Squibb

(Whooping-Cough)

Per 1000 Per 500 Per 100

T. T.

Antipyrine	1/2 gr.	}	Antipyrine is quite generally conceded to be a useful remedy in whooping-cough. It is combined in this formula with respiratory stimulants and antispasmodics, which increase its efficiency. The combination is palatable and readily taken by children. Dose: 1 tablet every hour or two until relieved, and then at longer intervals.

† Tablets Apomorphine Hydrochloride 1/100 gr., Squibb
 Per 1000 Per 500 Per 100

C. T.

Apomorphine hydrochloride, according to physiologists, at first stimulates the respiratory centers, and if the dose be sufficient to nauseate, causes marked depression; small doses given by the mouth act as an Expectorant and are useful in early stages of inflammation of the bronchi, where a hyperemic condition of the mucous membrane exists, and the secretion is viscid and difficult to expectorate. In larger doses it is an active Emetic, but must be given with caution, as it occasions marked depression. As an emetic it is used principally in case of poisoning and where a prompt and certain effect is wanted. For this purpose it is generally given hypodermically. Dose: 1 tablet every three or four hours.

† Tablets Apomorphine Hydrochloride 1/20 gr., Squibb
 Per 1000 Per 500 Per 100

C. T.

Dose: 1 tablet as an emetic, repeated cautiously until effective.

† Tablets Apomorphine Hydrochloride 1/10 gr., Squibb

Tablets Arsenic Iodide 1/50 gr., Squibb
 Per 1000 Per 500 Per 100

C. T.

This remedy is employed in cutaneous eruptions of a chronic character and some forms of malarial poisoning. Small doses are commenced with, and if gastric distress or reddening of the eyelids occur, the drug is withheld until the symptoms disappear and then resumed. Good effects have been observed in psoriasis, chronic eczema and other obstinate skin diseases. Dose: 1 or 2 tablets after eating. Dispense in glass.

Tablets Arsenic Iodide 1/25 gr., Squibb
 Per 1000 Per 500 Per 100

C. T.

Dose: 1 tablet with water after each meal. To be discontinued if pain or fulness of the stomach occur. Dispense in glass.

*** Tablets Arsenic Sulphide Red 1/50 gr., Squibb**

T. T.	Per 1000	Per 500	Per 100
Chocolate-coated (C. C. T.)			

Arsenic Sulphide Red is used in acne, eczema, psoriasis, and in suppurative skin diseases. The effect of arsenic is observed in nutrition, the patient gaining in weight and the skin becoming soft and smooth. In combination with sulphur it is reported especially useful in suppurative skin diseases and excellent results have been obtained in the treatment of boils and carbuncles. As with all arsenical preparations, its effect upon the system must be watched. The dose is generally increased to the point of toleration, when, if gastric symptoms or reddening of the eyelids occur, it is lessened or the remedy withdrawn for a short time and then resumed. **Dose:** 1 tablet, gradually increased to 3 or 4, after meals.

*** Tablets Arsenic Sulphide Red 1/30 gr., Squibb**

Oil Cloves	q. s. }			

Astringent, Antizymotic, Prophylactic. Morbid conditions of the alimentary tract due to fermentative decomposition or to septic infection are indications for the use of these

tablets. They combine a number of well-known antiseptics, which, by preventing putrefactive changes, allow digestion to proceed in a normal manner. **Dose:** 1 or 2 before or after meals, repeated in two hours if required. For diarrhea and in typhoid, 1 every two or three hours.

Tablets Bismuth Compound No. 2, Squibb

		Per 1000	Per 500	Per 100
T. T.				
Bismuth Subnitrate	1/2 gr. }			
Cerium Oxalate	1/2 gr. }			

This is a mild sedative to mucous surfaces, used in simple nausea, and in some

cases of infantile diarrhea with nausea as a disturbing symptom. These tablets are so made that they disintegrate at once in water. Where a child or older person cannot swallow a tablet, or where nausea exists, one or more may be placed in a spoonful of water, when they will instantly crumble to powder. **Dose:** 1 or 2 tablets repeated hourly until nausea is relieved.

Tablets Bismuth Oxide Hydrated 5 gr., Squibb

		Per 1000	Per 500	Per 100
C. T.				

This addition to our list has been made at the request of many physicians who desired a tablet for the extemporaneous preparation of Milk of Bismuth (Magma Bismuthi). The tablets disintegrate at once in water, and eight tablets added to an ounce of water and shaken slightly form a milky mixture from which the bismuth oxide separates on standing, but quickly mixes again to a perfectly homogeneous liquid upon slight agitation. The bismuth oxide seems to possess the power of coating a much larger surface than the subnitrate or subcarbonate. The indications for its use are the same as those for the subnitrate or subcarbonate. **Dose:** 1 to 3 tablets repeated every half hour until relieved, swallowed with a little water or diffused in a spoonful of water before taking.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Tablets Bismuth Salicylate 1 gr., Squibb

Per 1000 Per 500 Per 100

C. T.

Bismuth salicylate (subsaliolate) acts as an Astringent and Sedative to the mucous membranes and possesses Antiseptic properties. It is found useful in all catarrhal conditions of the alimentary canal, checking fermentation, allaying inflammation and acting as a tonic and astringent. In diarrhea, dysentery and typhoid its use has been followed with good results. **Dose:** 1-tablet every hour until symptoms improve.

Tablets Bismuth Salicylate 5 gr., Squibb

Per 1000 Per 500 Per 100

C. T.

Dose: 1 tablet with water every two or three hours until relieved. In fermentative dyspepsia, 1 tablet half an hour before meals and 1 tablet two hours afterwards.

Tablets Bismuth Subcarbonate 5 gr., Squibb

Per 1000 Per 500 Per 100

C. T.

Bismuth subcarbonate is preferred by some practitioners to the subnitrate. It acts as an Antacid and Astringent, and is considered valuable in flatulent dyspepsia, diarrhea, pyrosis, nausea, vomiting and gastric pain and inflammation. **Dose:** 1 or 2 tablets, repeated every half hour or two until relieved, in nausea, flatulent dyspepsia, pyrosis and diarrhea.

Tablets Bismuth Subgallate 1 gr., Squibb

Per 1000 Per 500 Per 100

T. T.

Bismuth subgallate has been highly recommended in fermentative dyspepsia. In addition to the Sedative and Antiseptic properties of bismuth, it has Astringent action owing to the presence of the gallic acid. It has been used with advantage in the treatment of fermentative disorders of the stomach and bowels, accompanied with nausea, flatulence, pyrosis and diarrhea; in acute and chronic catarrhal conditions of the alimentary tract. **Dose:** for children, 1 tablet every hour or two, to control vomiting and diarrhea.

Tablets Bismuth Subgallate 3 gr., Squibb

Per 1000 Per 500 Per 100

C. T.

Dose: for diarrhea, 1 or 2 tablets every two or three hours until relieved. As a gastric sedative, 1 or 2 tablets before meals, repeated in an hour or two if required.

Tablets Bismuth Subgallate 5 gr., Squibb

charge. Its action is Antiseptic, Anodyne and mildly Astringent. **Dose:** for adults, 1 tablet, every two or three hours; for children, 1 tablet in a tablespoonful of water and a teaspoonful of the solution given every two or three hours, stirring well before each dose.

Tablets Bismuth Subnitrate 1 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
--------------	----------	---------	---------

Bismuth subnitrate is used in dyspepsia, to control nausea and vomiting and to prevent flatulence and pyrosis. It is found useful in the chronic gastritis of alcoholics, in gastralgia and in ulcer of the stomach. It acts as a Sedative and Astringent in inflamed conditions of the mucosæ of the stomach and the intestines, especially when of a catarrhal nature. Tablets Bismuth Subnitrate Squibb disintegrate at once in the presence of water, and yield more rapid therapeutic effects than capsules or cachets. If, as sometimes happens in nausea, it is inadvisable to give much liquid, a tablet may be placed in a spoon and a few drops of water added. **Dose:** 1 tablet every hour or two, in diarrhea and vomiting in infants.

Strychnine Sulphate	1/120 gr. }	
Acid Arsenous	1/100 gr. }	

Tablets Blaud's Pill Compound No. 4, Squibb

(Tonic, Children's)

Per 1000 Per 500 Per 100

Pink-coated (P. C. T.)

Blaud's Mass	1 gr. }	The effects of iron in anemic and debilitated conditions are here intensified by alteratives, and other tonic remedies, thereby effecting improvement of the appetite, assimilation and nutrition, while the anemic condition gradually disappears. Dose: 1 or 2 tablets, according to age of child, after meals.
Quinine Sulphate	1/10 gr. }	
Acid Arsenous	1/500 gr. }	
Strychnine Sulph.	1/300 gr. }	
Corrosive Sublim.	1/400 gr. }	

Tablets Blaud's Pill Compound Improved, Squibb
Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Blaud's Mass	5 gr.	} As a well-made tablet containing Blaud's Mass rarely produces constipation, the addition of extract cascara sagrada in this formula might seem unnecessary. However, occasionally there are cases where obstinate constipation exists in anemic patients, and in such these tablets are used to special advantage. Dose: 1 tablet.
Acid Arsenous	$\frac{1}{50}$ gr.	
Extract Nux Vomica	$\frac{1}{8}$ gr.	
Extract Cascara Sagr.	$\frac{1}{2}$ gr.	

Tablets Blaud's Tonic Laxative. See Tablets Blaud's Mass and Aloin Compound.

Tablets Blue Mass 5 gr., Squibb
C. T. Per 1000 Per 500 Per 100

These tablets are made from the well-known Squibb Massa Hydrargyri, in which special care is taken to thoroughly subdivide the mercury, and upon which the efficiency and uniform action of the product depend. The mass is in no way altered by the process of transforming into tablets. Squibb's Blue Mass Tablets are to be preferred to pills of blue mass because they do not harden with age; moreover, they disintegrate promptly in water, and retain their therapeutic action indefinitely. Dose: 1 or 2 tablets at night, followed next morning by a saline cathartic.

Tablets Borax and Sodium Salicylate Compound, Squibb
(Antiseptic Detergent)

C. T. Per 500 Per 100 Bots. of 50 Per doz.

These tablets are a convenient means for preparing antiseptic solutions. They contain sodium bicarbonate ($4\frac{1}{2}$ gr.), sodium borate ($4\frac{1}{2}$ gr.), sodium salicylate ($\frac{1}{11}$ gr.), eucalyptol, menthol and methyl salicylate. They are non-poisonous and when dissolved in the proportion of 1 tablet in 2 fluidounces of water, yield a bland detergent fluid with mild antiseptic powers, which is a slight modification of the solution originally proposed by Dr. Carl Seiler. They have been found very efficacious as a spray or douche in acute or chronic catarrh, as a gargle in sore throat, and as a mouth wash.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

**Tablets Borax and Sodium Salicylate Compound,
Improved, Squibb** (Antiseptic Detergent Improved)

			Bots. of 50
C. T.	Per 500	Per 100	Per doz.

These tablets are preferred where a slight astringent effect upon the mucous membrane is desired. They contain in addition to the ingredients of the preceding antiseptic tablets, sanguinarine nitrate ($\frac{1}{60}$ gr.) and hydrastine hydrochloride ($\frac{1}{120}$ gr.); these lend stimulating and astringent properties to the combination. For preparing a spray, nasal douche or mouth wash, dissolve 1 tablet in 2 fluidounces of water.

†* **Tablets Brown Mixture, Squibb**

(One teaspoonful)

		Per 1000	Per 500	Per 100
T. T.				
Extract Licorice	$\frac{1}{10}$ gr. }			
Camphor	$\frac{1}{25}$ gr. }			
Acid Benzoic	$\frac{1}{25}$ gr. }			
Oil Anise	$\frac{1}{25}$ min. }			
Opium Powdered	$\frac{1}{25}$ gr. }			
Tartar Emetic	$\frac{1}{60}$ gr. }			

Brown Mixture has long been a popular remedy in treatment of coughs with hot, dry skin, scanty expectoration, hoarseness and difficult breathing. It owes its virtue largely to the small quantity of tartar emetic it contains, which by its action upon bronchial mucous membrane and the skin tends to relieve the cough and oppression and to increase expectoration. These tablets are used chiefly in children over two years old. **Dose:** 1 tablet every hour until the acute symptoms are relieved or slight nausea occurs, and then at longer intervals.

† **Tablets Brown Mixture Compound, Squibb**

		Per 1000	Per 500	Per 100
C. T.				

Brown Mixture	1 fl. dr. }			
Ammonium Chloride	1 gr. }			

The addition of ammonium chloride to this formula serves to increase its expectorant effect and to counteract in a measure the depressant action of the tartar emetic. It is considered an excellent remedy in coughs and colds with painful and scanty expectoration of viscid mucus. **Dose:** 1 tablet, allowed to dissolve in the mouth or taken with a swallow of water, every hour or two until symptoms improve, and then at longer intervals.

Tablets Buchu Compound, Squibb

(Infusion Buchu Compound)

Per 1000 Per 500 Per 100

C. T.

Each tablet represents:

Infusion Buchu	3 dr. }	Irritable conditions of the bladder and urethra, and cystitis with acid urine, are reported to be markedly relieved by the use of these
Tr. Hyoscyam. U.S.P. '90	20 min. }	
Potassium Bicarbonate	6 gr. }	

tablets; the bicarbonate of potassium neutralizing acidity, reducing inflammation, increasing the action of the kidneys and exerting a solvent action upon uric acid calculi. Hyoscyamus allays pain and tenesmus, and quiets the irritable state of the bladder. Buchu is regarded as a diuretic and stimulant to the mucous membranes of the genito-urinary organs. It is said to reduce inflammation, to increase the secretion of the kidney when scanty, and to render it bland and non-irritating. Tablets Buchu Compound Squibb have been found useful and to afford prompt relief in vesical and urethral inflammation with strongly acid urine; in mild disorders caused by cold or disturbed digestion with painful and frequent micturition; in subacute gonorrhea and enlarged prostate; and in the atonic conditions of the bladder in elderly men, with incontinence or retention of urine. **Dose:** 1 or 2 tablets, with a glass of hot water, every three or four hours.

Tablets Caffeine 1 gr., Squibb

Per 1000 Per 500 Per 100

T. T.

Caffeine is believed to strengthen the cardiac contractions and increase arterial pressure; also to act directly upon the kidneys. Hence it is used as a Cardiac and Renal Stimulant, as a stimulant to the cerebral functions, and also as an antidote in morphine poisoning. **Dose:** 1 tablet three or four times a day.

Tablets Caffeine Citrated 1 gr., Squibb

Per 1000 Per 500 Per 100

T. T.

Dose: 1 tablet three or four times a day, as a Cardiac and Renal Stimulant.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Tablets Caffeine Compound, Squibb

Per 1000 Per 500 Per 100

T. T.

Caffeine Citrated 1 gr. } This combination is used with
 Nitroglycerin $\frac{1}{200}$ gr. } good effects in cardiac dilata-
 tion and in affections of the
 kidneys. According to clinical observation, it supports the heart,
 lowers arterial tension and increases the urinary secretion, and
 is useful in relieving the headaches in contracted kidney and in
 increasing the flow of urine in acute parenchymatous nephritis.
Dose: 1 tablet three or four times a day.

Tablets Calcium Sulphide $\frac{1}{20}$ gr., Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Calcium sulphide (so-called; more correctly, sulphurated lime)
 is said to check suppuration and inflammation, and has been
 used in the treatment of boils, acne, carbuncles, discharges
 from the ear, conjunctivitis, enlarged glands, chronic bronchitis
 with purulent secretion, etc. As the drug is unpleasant to the
 taste and smell, the tablets are offered in chocolate-coated form
 only. **Dose:** 1 to 3 tablets after meals.

Tablets Calcium Sulphide $\frac{1}{10}$ gr., Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Dose: 1 or 2 tablets every two or three hours, for boils, car-
 buncles and other suppurative conditions.

Chocolate-coated (C. C. T.)

Dose: 1 tablet three or four times a day, for boils, carbuncles,
 etc.

*** Tablets Calomel 1/100 gr., Squibb**

Per 1000 Per 500 Per 100

T. T.

Small doses of calomel are regarded as valuable in disordered states of the alimentary canal, whether associated with diarrhea or with constipation. In diarrhea with clay-colored feces, digestive disturbance and febrile symptoms it has been found to act remarkably well, changing the color and character of the stools, relieving the dyspepsia, and allaying the restlessness and fever. Small doses repeated until the desired effect is obtained seem to accomplish as much as larger ones, with less systemic disturbance. Careful trituration is one of the prominent features of Tablets Calomel Squibb, resulting in accurate dosage and uniform therapeutic action. **Dose:** for an infant, 1 tablet every hour or two until symptoms improve.

*** Tablets Calomel 1/20 gr., Squibb**

Tablets Cannabis Extract $\frac{1}{4}$ gr., Squibb

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Cannabis has been employed as a Sedative, Anodyne and Hypnotic, in cases where opium does not agree with the patient. Unlike the latter, it causes neither nausea nor constipation. It produces at first a mental stimulation, which is later followed by a calmer mood and finally by sleep. It is used in acute and chronic mental derangements, in neuralgia, migraine, gout and rheumatism. In combination with the bromides (see Tablets Triple Bromides and Cannabis Compound) it is employed in hysteria, delirium tremens and mild cases of mania. All patients do not respond to it alike; and while no doubt idiosyncrasy plays a great part, yet the quality of the drug has much to do with its constitutional effect. In all our preparations of this drug the best quality of hemp is used. The results will be found uniform and reliable. **Dose:** 1 tablet every 2 or 3 hours.

† Tablets Cannabis and Aconite Compound, Squibb

(Anticonstipation)

C. T.		Per 1000	Per 500	Per 100
Chocolate-coated (C. C. T.)				
Ext. Cascara Sagrada	1 gr.	} Cascara is regarded as a safe and certain laxative, stimulating the intestinal glands and increasing peristalsis. Its mild action is here supplemented by		
Ext. Nux Vomica	1/8 gr.			
Ext. Belladonna	1/8 gr.			
Ipecac	1/8 gr.			
Podophyllin	1/8 gr.			

Cascara is regarded as a safe and certain laxative, stimulating the intestinal glands and increasing peristalsis. Its mild action is here supplemented by podophyllin, an active cholagogue and cathartic. Ipecac acts as a gastric and hepatic stimulant. Nux vomica and belladonna tend to prevent griping, to overcome muscular relaxation of the bowel and to render the laxative action of the other remedies more certain. Headache, dyspeptic symptoms and constipation are the indications for these tablets. Dose: 1 or 2 tablets at night.

Tablets Cascara Sagrada Extract 2 gr., Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

These tablets represent about 8 grains of carefully selected and well-cured cascara sagrada bark. They have been found useful in the treatment of habitual constipation. Dose: 1 tablet after meals, or 1 or 2 tablets at night; decreasing the dose or taking less frequently as the constipation is relieved.

Tablets Cascara Sagrada Extract 3 gr., Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

These tablets represent about 12 grains of cascara sagrada bark. Dose: 1 tablet after meals or 1 or 2 at night.

Tablets Cascara Sagrada Extract 5 gr., Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

These tablets are equivalent to about 20 minims of fluidextract cascara sagrada. Dose: 1 tablet after dinner or at bedtime.

Tablets Cascara Fluidextract 5 min., Squibb

C. T. Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Cascara sagrada is considered a safe and certain Laxative, stimulating the intestinal glands, increasing peristalsis, and acting as a tonic to the intestinal mucous membrane. Its use, it is maintained, may be continued as long as occasion arises, without enfeebling effect. In the majority of cases it has a tendency to act in decreasing doses and to gradually restore the bowels to their normal condition. As a laxative in chronic constipation it is deemed one of the best remedies thus far introduced. Tablets Cascara Fluidextract Squibb represent the active properties of 5 grains of carefully selected and well-seasoned cascara sagrada bark. Dose: 1 or 2 tablets at night or after meals, decreasing as the constipation is relieved.

Tablets Cascarin Compound, Squibb

Per 1000 Per 500 Per 100

T. T.

Chocolate-coated (C. C. T.)

Cascarin	$\frac{1}{4}$ gr.	} Where a decided impression is to be made upon the bowels, this formula has proved very satisfactory. Depending upon the dose, it acts as a Laxative or Purgative. It does not always produce griping, but where constipation is pronounced and the fecal accumulation solid, pain is sometimes produced. This may in a measure be prevented by copious draughts of water, and is not so liable to occur under the continued and properly regulated use of the tablets. This formula is not considered eligible where an inflammatory condition of the intestines exists. Dose: 1 tablet after meals with water.
Aloin	$\frac{1}{4}$ gr.

T. T.

Dose and indications similar to those of Tablets Codeine (alkaloid) 1/2 gr.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

† **Tablets Codeine Sulphate 1 gr., Squibb**

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Dose: 1 tablet three or four times a day as required, as an Anodyne and Soporific.

Tablets Colchicine 1/100 gr., Squibb

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Colchicine is largely used in gout and rheumatism. It is reported to act upon the nerves, the skin and the bowels; allaying pain, inciting free perspiration with a subsidence of the fever and inflammation, and producing free evacuations from the bowels. Some observers state that it acts also as a diuretic, but this is denied by Garrod and others. Certain patients show more susceptibility to its action than others, and it is hence deemed best to begin with small doses and gradually increase until the systemic effect is observed. **Dose:** 1 tablet every three hours until bowels move or symptoms are relieved.

Tablets Colchicine 1/50 gr., Squibb

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Dose: 1 tablet three times a day; less frequently if the bowels move too freely. In overdoses colchicine is an active poison.

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Creosote has been used with good results in chronic bronchitis and in phthisis, also as an intestinal antiseptic. It is reported to improve nutrition, increase appetite, diminish expectoration and cause an increase in weight. It is recommended to give the remedy in gradually increasing dose until the point of tolerance is reached. Should, however, gastric disturbances arise, its use is discontinued or the dose reduced until the irritation subsides. Tablets Creosote Squibb are made from the purest wood creosote, and are prepared so that they disintegrate quickly in the stomach and cause little or no gastric irritation. **Dose:** 1 tablet immediately after meals, with water or milk, gradually increased as tolerance is established.

Tablets Creosote 2 min., Squibb

† **Tablets Diacetylmorphine 1/24 gr., Squibb**

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Diacetylmorphine is considered a remedy of much value, as a stimulant to the respiration in dyspnea and emphysema and as a sedative in the treatment of bronchial and tubercular cough, and to be preferable to morphine as a cough sedative because it does not disturb digestion readily. In asthma its action is reported to be prompt and prolonged, not only diminishing the severity of the attacks, but preventing their recurrence. Combined with expectorants it is deemed useful in bronchitis, pneumonia and grip, and it is also used as a mild anodyne. According to some authorities, diacetylmorphine (or heroin) is more toxic than morphine and less valuable for the relief of pain; it is equally habit forming. **Antidotes:** Same as of morphine. **Dose:** 1 or 2 tablets after meals and at bedtime, for the relief of cough and pain.

† **Tablets Diacetylmorphine 1/12 gr., Squibb**

*** Tablets Digitalin (German) 1/100 gr., Squibb**

Per 1000 Per 500 Per 100

T. T.

According to authorities, digitalin is a direct Cardiac Stimulant and Diuretic, particularly useful in cardiac decompensation, where the heart action is rapid and very irregular (auricular fibrillation). Its effects are produced slowly, but they are prolonged and cumulative, especially where the urinary secretion is not increased. The direct diuretic action of digitalin is stated to be small, and the drug to be effective in dropsy only when the latter is due to impaired circulation. **Dose:** 1 tablet every three or four hours.

*** Tablets Digitalin (German) 1/60 gr., Squibb**

Per 1000 Per 500 Per 100

T. T.

Dose: 1 tablet every three or four hours, as a Renal and Cardiac Stimulant. If headache or digestive disturbance occur, the intervals between the doses are increased.

Tablets Digitalis Fluidextract 1 min., Squibb

Per 1000 Per 500 Per 100

C. T.

Digitalis strengthens heart action. It increases the force of the contractions, reduces the frequency of the pulsations, and overcomes irregularity. It raises arterial tension partly by increased muscular contraction of the heart, but chiefly, according to Brunton, by contraction of the arterioles. It is used as a Heart Stimulant in all cases of weak, irritable or intermittent heart action. The direct diuretic action of digitalis is small, but in cardiac disease it has been found to produce marked diuresis and therefore to prove of value as a rule in cardiac dropsy. **Dose:** 1 tablet three or four times a day, reducing the dose if nausea, flushing of the face, or headache occur.

Squill	1 gr. }	

kidney, but by its action on the heart in disease, it causes diuresis by increasing the blood supply to the kidneys. Squill has been found useful in passive forms of dropsy where the heart is obstructed and the pulse weak; but its use is avoided when an irritable condition of the kidney exists. Buchu stimulates the mucous membrane, and with the nitrate of potassium increases the diuretic power of the combination. **Dose:** 1 tablet three times a day, between meals, with a large glass of water.

Tablets Guaiacol 1/2 gr., Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

Chocolate-coated (C. C. T.)

Guaiacol was introduced into the materia medica by Professor Mueller as being superior to creosote. Wood creosote owes its therapeutic value largely to the guaiacol it contains. However, the beneficial effects that might be derived from the use of guaiacol in tuberculosis are often not obtained on account of its disagreeable odor and taste and the dyspeptic symptoms which its administration sometimes causes. These objections are almost entirely overcome in Squibb's tablets; the coating covers the taste and smell, and the guaiacol is presented to the stomach in such a finely divided state that it rarely causes any digestive disturbance. Dose: 1 or 2 tablets with water or milk every two or three hours or thrice daily.

Tablets Guaiacol 1 gr., Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Dose: 1 to 3 tablets after meals and at bedtime, with water.

Tablets Guaiacol Carbonate 1 gr., Squibb

T. T. Per 1000 Per 500 Per 100

Aside from its recognized therapeutical value, Guaiacol Carbonate owes its popularity as an Intestinal Antiseptic and Anti-tubercular remedy to its freedom from unpleasant taste or odor and the absence of digestive disturbances or other bad after-effects from its continued use. Dose: 1 to 5 tablets three or four times a day, with water.

Tablets Halazone 1/16 gr., Squibb

per 1,000 ; per 500 ; per 100

Halazone (Para-Sulphondichloraminobenzoic Acid) was introduced by Drs. H. D. Dakin and E. K. Dunham for the convenient sterilization of drinking water. It is a powerful disinfectant, acting like chlorine but having the advantage of being stable in solid form. The tablets contain, besides the halazone, sufficient anhydrous sodium carbonate and sodium chloride to render them quickly soluble. (Dr. Dakin.) For use, 1 tablet is added to a quart of water, and the latter set aside for about an hour. (Write for literature on Chloramine-T and other recent chlorinated products.)

Tablets Hexamethylenamine 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Hexamethylenamine has been used to render the urinary secretion aseptic. Its action depends upon the fact that it is decomposed in the system into formaldehyde, which being largely excreted by the kidneys, has the effect, it is claimed, of making the urine aseptic. Advantage is taken of this action in minor surgery of the genito-urinary organs, the remedy being administered several days prior to the intended operation. In cystitis, with alkaline urine, heavily charged with pus and phosphates,

Tablets Hexamethylenamine 5 gr., Squibb (Cont.)

it frequently restores the acid reaction and clears the urine. Later the simultaneous use of sodium acid phosphate has been recommended for the purpose of rendering the urine acid or increasing its acidity and thus to enhance the antiseptic action of the hexamethylenamine by favoring its decomposition and the liberation of formaldehyde. For this purpose the sodium salt is given at least 2 hours before the hexamethylenamine. In sub-acute gonorrhea, pyelitis and catheter fever, good effects have also been observed from hexamethylenamine. Occasionally it causes hematuria. **Dose:** 1 or 2 tablets every three or four hours and at bedtime, with a large glass of water.

Tablets Hexamethylenamine 7 1/2 gr., Squibb

(Gargle Astringent)

	Per 1000	Per 500	Per 100
C. T.			

Fl. Golden Seal (Colorless)	1 min.	} A useful gargle in relaxed and inflamed conditions of the throat may be readily prepared with these tablets. They dissolve quickly, yielding an Astringent and Antiseptic fluid
Alum	3 gr.	
Acid Tannic	2 gr.	
Oil Wintergreen	q. s.	

which has been found to relieve pain and ulceration in tonsillitis and pharyngitis. Occasional use of this gargle in persons exposed to contagion will tend to keep the mucous membrane of the mouth and throat in a healthy condition, constricting the parts and restoring the tonicity of the adjacent muscles. In loss of voice from strain or following acute throat affections, these tablets are employed with benefit. For use, 1 or 2 tablets are dissolved in a glass of water and the solution used as a gargle every half hour or hour, warm if preferred. [NOTE: These tablets do not yield a clear aqueous solution, and if such is desired, the liquid should be strained through absorbent cotton.]

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

T. T.

Chocolate-coated (C. C. T.)

Iron Reduced	1/2 gr.	} The alternative and tonic effect of iron, arsenic and strychnine is here increased by small doses of quinine. Anemic and debilitated conditions due to malarial influences, with loss of appetite, impaired digestion, and faulty assimilation, are benefited by these tablets, and in chlorosis and anemic amenorrhea, as well as in neuralgic affections depending upon defective nutrition, they have also been used with good results. Dose: 1 or 2 tablets with water, after meals.
Strychnine Sulphate	1/120 gr.	
Quinine Sulphate	1/2 gr.	
Acid Arsenous	1/100 gr.	

Tablets Iron Peptonate with Manganese, Squibb

Per 1000 Per 500 Per 100

Pink-coated (P. C. T.)

Iron Peptonate	1/4 gr.	} Use is made in these tablets of one of the organic salts of iron, which is claimed to be readily absorbed by the stomach without disturbance, and to produce a rapid and permanent effect upon the blood. Strontium arsenite adds an alterative effect, and the hematinic action of the iron is intensified by the manganese. Strychnine and quinine act as digestive and systemic tonics. Dose for children: 1 tablet after meals.
Manganese Dioxide	1/10 gr.	
Quinine Sulphate	1/4 gr.	
Strych. Phosphate	1/250 gr.	
Strontium Arsenite	1/250 gr.	

Tablets Iron Pyrophosphate Compound, Squibb

C. T.

Per 1000

Per 500

Per 100

Chocolate-coated (C. C. T.)

Iron Pyrophosphate	1 gr.	} In cases of lowered vitality where a tonic is needed to stimulate metabolism, this formula will be found serviceable. It contains four of the most efficient systemic tonics, and favorable results may be looked for in anemia, convalescence from disease, cachexia, and in all cases where, through defective metabolic action, the condition of the system is below normal. Occasionally in some patients, after the continued use, reddening of the eyelids and epigastric pain are experienced, due to the arsenic. If these symptoms arise, it is advised to discontinue the tablets for a few doses. Dose: 1 tablet with water after meals and at bedtime.
Quinine Sulphate	1/2 gr.	
Strychnine Sulphate	1/60 gr.	
Acid Arsenous	1/30 gr.

(Astringent Wash)

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Lead Acetate	2 gr. }	Dissolved in water, these tablets yield an astringent and sedative lotion. Applied to indolent sores and ulcers and in moist skin diseases, they tend to allay inflammation, and itching and to promote healing. As an injection in gonorrhea and leucorrhea they have also given excellent results. The rapidity with which they disintegrate renders them very convenient for preparing such quantities of lotion as may be needed without delay. They do not yield a clear solution, and if the slight precipitate which is present is objectionable, it may be removed by straining the liquid through a little absorbent cotton. As a lotion or injection 1 tablet is dissolved in 2 to 4 fluidounces of water. Keep the bottle well corked, and dispense in glass.	
Zinc Acetate	2 gr. }		
Berberine Hydrochl.	$\frac{1}{20}$ gr. }		
Morphine Acetate	$\frac{1}{32}$ gr. }		

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Doz. bots. of 50 Per 1000 Per 500 Per 100

C. T.

Dose: 1 or 2 tablets dissolved in a glass of water three or four times a day, an hour before meals and at bedtime.

Tablets Macroton Compound, Squibb

(Dr. John Stevens)

Per 1000 Per 500 Per 100

T. T.

Macroton	$\frac{1}{10}$ gr.	} This formula is used in the treatment of rheumatic and sciatic pains. Macroton is a resinoid derived from black cohosh, and, like it, reputed to be a nervine and antispasmodic. Bryonia acts as a hydragogue cathartic. Strychnine arsenate is used in rheumatic and neuralgic pains, often of obscure malarial origin. Poison oak acts as a stimulant narcotic and has been found useful in the pains of chronic rheumatism. Dose: 1 tablet every 2 hours; in severe pain, 1 tablet hourly until relieved.
Bryonia	$\frac{1}{20}$ gr.	
Strychnine Arsenate	$\frac{1}{125}$ gr.	
Fl. Ext. Rhus Tox.	$\frac{1}{20}$ min.	

Tablets Magnesia Aromatic, Squibb

Per 1000 Per 500 Per 100

C. T.

Each of these tablets represents a teaspoonful of milk of magnesia in palatable and convenient form. They contain a small quantity of aromatics to overcome the flat alkaline taste usually attending the liquid preparation. They act as an Antacid, and in large doses possess also Laxative action. Tablets Magnesia Aromatic Squibb are employed for correcting acid conditions of the mouth as well as gastric hyperacidity; and they may be used also for the extemporaneous preparation of milk of magnesia by the physician. **Dose:** 1 or more tablets as occasion requires, swallowed with a little water or diffused in a spoonful of water.

Tablets Magnesia and Sodium Bicarbonate. See Tablets Sodium Bicarbonate and Magnesia.

Tablets Magnesium Oxide Hydrated. See Tablets Magnesia Aromatic.

Tablets Magnesium Salicylate 5 gr., Squibb

Per 1000 Per 500 Per 100

C. T.**With Cacao**

The physiological action of magnesium salicylate is essentially the same as that of sodium salicylate, but it has latterly been warmly recommended by Prof. I. Boas, of Berlin University, a recognized authority on gastroenteric diseases and their treatment, as an Antifermentative, presenting as it does a happy combination of the antizymotic salicylic acid and just sufficient of the laxative magnesium oxide to counteract the constipating and consequently the cumulative by-effect of the acid. Boas uses it in flatulence and fermentative dyspepsia and as a general Intestinal Antiseptic. **Dose:** 1 to 6 tablets three times daily, with water, after meals.

Tablets Manganese and Blaud's. See Tablets Blaud's and Manganese Compound.

Tablets Manganese and Ergot. See Tablets Ergot and Manganese.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

Tablets Manganese Compound, Squibb

(Amenorrhea, Anemic)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Manganese Dioxide	1 gr.	} This combination of tonics tends to reestablish the menstrual functions when their absence is due to an anemic or cachectic state of the system, as seen in poorly nourished patients. The gentian and nux vomica serve to increase the appetite and improve digestion. The iron, arsenic and manganese, by their hematopoietic action tend to cause a marked improvement in nutrition. Capsicum acts as a gastric stimulant; cascara removes tissue waste. Dose: 1 tablet, with water, three or four times a day.
Iron Reduced	1 gr.	
Ext. Gentian	1 gr.	
Ext. Cascara	1/2 gr.	
Ext. Nux Vomica	1/6 gr.	
Capsicum	1/8 gr.	
Acid Arsenous	1/50 gr.	

Tablets Manganese Dioxide 2 gr., Squibb

Per 1000 Per 500 Per 100

C. T.**Chocolate-coated (C. C. T.)**

Manganese Dioxide is used principally for its Emmenagogue and Hematinic effects in amenorrhea and anemia. It acts very much like iron, and usually improves nutrition, as shown in the increase of red corpuscles and hemoglobin in the blood, and in cases of amenorrhea frequently by the return of the suspended function. It has also been recommended, in larger doses (10 grains three times a day), in gastrodynia and pyrosis. Dose: 1 or 2 tablets three times a day after meals, with water; in amenorrhea the treatment is begun four or five days before expected period.

Tablets Night Sweat. See Tablets Agaricin Compound.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

***Tablets Nitroglycerin 1/200 gr., Squibb**

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Nitroglycerin controls spasm and paroxysmal pain, and lessens arterial tension by the relaxation which it produces upon the whole arterial system, but mainly by its dilatation of the arterioles. It thus reduces the work of the heart and under its influence the beat becomes full and regular. It is deemed a valuable remedy in angina pectoris, syncope, asthma, epilepsy and the headaches of Bright's disease, and it is employed to increase the flow of urine in chronic parenchymatous nephritis. If the face is flushed it is not given. **Dose:** 1 tablet, repeated in an hour if necessary.

still further increased, and many cases of digestive and intestinal torpor are corrected by their administration. This formula has been found useful where the symptoms of coated tongue, loss of appetite, more or less gastric distress and headache occur after eating. **Dose:** 1 tablet before meals, with water.

Tablets Nux and Pepsin, Squibb

(Dr. Skiff)

Per 1000 Per 500 Per 100

T. T.

Nux Vomica	$\frac{1}{100}$ gr.	} Nux vomica and pepsin constitute a useful combination in the treatment of atonic dyspepsia. The dose of each ingredient being small, admits of its use in a large range of cases. We also offer this combination in a more concentrated form. (See below.) Dose: 1 tablet every two hours or 2 tablets after meals, repeated as needed.
Pepsin	$\frac{1}{10}$ gr.	

Tablets Nux and Pepsin No. 3, Squibb

T. T.

Per 1000 Per 500 Per 100

Nux Vomica	$\frac{1}{10}$ gr.	} This combination stimulates the gastric secretions and hastens digestion. It has been found useful in atonic dyspepsia. On account of the small quantity of nux vomica in the formula, the tablets may be given to either children or adults, in appropriate dosage. Dose: 1 or more tablets after meals, repeated in an hour if necessary.
Pepsin	1 gr.	

Tablets Nux and Phosphorus Compound, Squibb

(Aphrodisiac, Dr. Landers)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Extract Nux Vomica	$\frac{1}{8}$ gr.	} This formula is credited with the power to correct lowered vitality of the system as seen in debility, neurasthenia and sexual exhaustion. Dose: 1 tablet after meals and at bedtime.
Phosphorus	$\frac{1}{100}$ gr.	
Extract Damiana	$\frac{1}{4}$ gr.	
Gold and Sod. Chlor.	$\frac{1}{20}$ gr.	

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Tablets Nux Vomica Extract 1/4 gr., Squibb

Per 1000 Per 500 Per 100

T. T.**Chocolate-coated (C. C. T.)**

Nux vomica is considered a valuable remedy in atonic dyspepsia, stimulating the appetite, overcoming gastric atony and increasing intestinal peristalsis. It acts as a tonic upon the heart and vasomotor centers. In functional paralysis, neuralgia, impotence, incontinence of urine, and as a general nerve tonic it has also been used with good results. The tablets offered here are made from an assayed extract; and the alkaloidal content being always the same, uniform and reliable therapeutic effects may confidently be expected. **Dose:** 1 tablet after meals.

Tablets Occult Blood Test, Squibb

per package containing 5 x 20 tablets and a dropping bottle of glacial acetic acid,

It is essential that any test for occult blood be accurate, and important that it be simple in its technic. After considerable experimenting, Dr. Dudley Roberts, of Brooklyn, N. Y., worked out an extremely satisfactory benzidin tablet, and in both private and hospital work he has come to use it to the exclusion of other tests. This tablet is composed of 1 part benzidin to 20 parts of sodium perborate triturated with great care and made up into a 5-grain tablet. The specimen to be tested, either a weak emulsion of the stool or the stomach contents or urine, is placed either in a small saucer, pus basin or porcelain dish in sufficient quantity to wet the tablet thoroughly, but not to entirely immerse it. A drop or two of glacial acetic acid on the tablet if blood be present gives rise to a more or less immediate change in the tablet to a greenish blue. Experience with its use gives a fairly accurate idea of the amount of occult blood present, depending on the extent and quickness of the color change. If the amount of blood is small, only the edge of the tablet may turn. Such is the simplicity of this tablet test for occult blood that a nurse or intelligent patient may watch the appearance or disappearance of occult blood without laboratory apparatus of any kind, with merely a small dish and the handle of a spoon with which to make a thin emulsion.

† Tablets Opium (Powdered) 1/4 gr., Squibb

Per 1000 Per 500 Per 100

T. T.

Hypnotic, Sedative and Anodyne. These tablets are made from Squibb's powdered opium, and contain all of its properties in an unaltered form. **Dose:** 1 to 4 tablets repeated as required.

† Tablets Opium (Powdered) 1/2 gr., Squibb

Per 1000 Per 500 Per 100

Dose: 1 or 2 tablets, repeated as required.

Ext. Taraxacum	1 gr.	

fatty and starchy food and improves nutrition; quinine and nux vomica remove the atonic conditions; extract of colocynth compound and taraxacum stimulate the liver and overcome hepatic torpor. The combination is a favorite remedy in intestinal indigestion in women and persons of sedentary habits, acting remarkably well in neurasthenic patients. **Dose:** 1 or 2 tablets before meals, repeated in two hours if required.

Tablets Papain and Charcoal Compound, Squibb

(Absorbent Digestive)

Per 1000 Per 500 Per 100

C. T.

Papain	1 gr.	} Antacid, Corrective, Digestive. Papain is a digestive ferment, and is active in alkaline as well as acid secretions. In combination with charcoal and sodium bicarbonate it has been found
Charcoal	2 gr.	
Sodium Bicarbonate	2 gr.	
Ext. Nux Vomica	1/10 gr.	
Ipecac	1/10 gr.	
Wintergreen Flavor	q. s.	

useful in delayed digestion, accompanied with fermentation, flatulence and pyrosis. Ipecac and nux vomica stimulate the peptic cells and hence overcome gastric atony. Tablets Papain and Charcoal Compound are used with generally good results in chronic indigestion, in acute indigestion the result of overeating or imperfect mastication of food, or where, from debilitated conditions, the secretion of gastric juice is deficient in amount or weak in digestive power. **Dose:** ordinarily 1 or 2 tablets are given immediately before meals or after each meal, with water, and repeated in an hour or two if required; sometimes, however, 4 to 6 tablets are administered for one dose, with a glass of moderately hot water, for the relief of acute dyspepsia. It is maintained that the use of these tablets may be continued for prolonged periods without thereby weakening the digestive functions.

Tablets Papain Compound, Squibb

Per 1000 Per 500 Per 100

C. T.

Papain	$\frac{3}{4}$ gr. }	This is considered an excellent combination, agreeable to the taste and usually affording prompt relief in gastric indigestion, by virtue of its
Charcoal	$\frac{3}{4}$ gr. }

C. T.	Per 1000	Per 500	Per 100
Chocolate-coated (C. C. T.)			
Pepsin	1 gr. }	Used in delayed or imperfect digestion, supplying the gastric and pancreatic ferments necessary for the elaboration of food. The calcium lactophosphate is split in the stomach, producing lactic acid. Dose: 1 or 2 tablets after meals, repeated in an hour or two if required.	
Pancreatin	1 gr. }		
Celery Seed	1/4 gr. }		
Calcium Lactophosph.	1/4 gr. }		

phosphate is split in the stomach, producing lactic acid. **Dose:** 1 or 2 tablets after meals, repeated in an hour or two if required.

NOTE.—Combinations of pepsin with pancreatin have been criticized in some quarters, it being maintained that in solution these ferments destroy one another, and that under physiologic conditions they are chemically impossible. This and the following three formulas have been added to our list in response to many demands from physicians. In this connection we might state that we do not approve of all the formulas contained in this list, from a strict therapeutic standpoint, but our position as purveyors to the medical profession demands that we supply those combinations of remedies which the experience of many of our patrons seems to indorse; and the fact that we offer such combinations in response to an existing demand in no way implies any discourtesy to contrary opinions.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Tablets Phenolphthalein 1 1/2 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
Pink-coated (P. C. T.)			

Phenolphthalein has been extensively used as a laxative and with generally good results. Its freedom from bitter taste, absence of unpleasant after-effects and small dose recommend its use for children and delicate women. Clinical reports have demonstrated its value as a safe and reliable remedy. Taken at bedtime it usually produces an evacuation the next morning, although in obstinate cases two doses during the day are sometimes required. **Dose:** for adults, 1 to 3 tablets at bedtime, repeated if necessary after breakfast the following morning; for children, 1/2 to 1 tablet, reducing the dose as the bowels resume their normal functions.

Tablets Phenolphthalein 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Intended for more resistant cases of constipation. **Dose:** 1 or 2 tablets at bedtime; in the beginning of the treatment and in obstinate cases, 1 or 2 tablets after supper, repeated at bedtime, reducing the dose as the bowels resume their normal functions.

Tablets Phenolphthalein with Chocolate, Squibb

C. T.	Per 1000	Per 500	Per 100
Phenolphthalein	1 1/2 gr. }	The addition of chocolate to phenolphthalein affords an agreeable method of administering this remedy to children and delicate women. The tablets are entirely free from disagreeable taste and may be eaten as a confection. Their action has been found prompt and certain and no disagreeable after-effects have been noticed. These tablets are offered to offset the many secret preparations of this remedy. Dose: 1 to 3 tablets at bedtime; children, 1/4 to 1 tablet.	
Chocolate	q. s. }

Tablets Podophyllin 1/8 gr., Squibb

T. T.	Per 1000	Per 500	Per 100
Chocolate-coated (C. C. T.)			

Cathartic and Cholagogue, stimulating the liver, causing an increased flow of bile and producing free action of the bowels, appearing to act principally upon the small intestines. Podophyllin is used in jaundice and congested states of the system, with headache, sluggish liver and disordered bowels, with flatulence and colicky pains. In small doses it operates with little disturbance; but larger doses often cause griping, which may be overcome by combination with other agents. (See Cascara combinations.) **Dose:** 1 tablet after meals; or 1 or 2 tablets at bedtime.

Tablets Podophyllin 1/4 gr., Squibb

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Chocolate-coated (C. C. T.)

Dose: 1 tablet after meals; or 1 tablet at bedtime.

Tablets Potassium Bromide 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Potassium bromide acts as a Cerebral and Spinal Sedative, in small doses lessening nervous excitement, quieting the brain, the sexual system and the reflex centers of the spinal cord; in large doses it paralyzes the cerebro-spinal centers. Hence it is used in excited states of the nervous system, to allay reflex irritability; it is said to be contra-indicated in excitement due to nerve exhaustion. It is given with good results in wakefulness caused by overwork or worry, in the convulsions of epilepsy, Bright's disease, and the convulsions of children, whether of centric origin, or depending upon other causes. In sexual excitement, threatened abortion, nervous headache, hysteria and delirium it is also deemed valuable. **Dose:** 1 to 3 tablets, dissolved in water, repeated every hour for two doses if necessary, to quiet the nerves and induce sleep; for convulsions, 3 to 6 tablets in water, repeated if necessary.

Tablets Potassium Bromide 10 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Dose: 1 to 3 tablets in water, as required.

Tablets Potassium Chlorate 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Screw-cap pocket vials, per doz.,

Potassium chlorate is used in affections of the mouth and throat, to allay inflammation; it is a popular remedy in acute sore throat, with huskiness of the voice. In aphthæ, ulcerative stomatitis and mercurial salivation it is used with good results; also in diphtheria and scarlatina. It is also employed to overcome the vocal fatigue of speakers and singers. **Dose:** 1 tablet, dissolved in the mouth, every two or three hours.

Tablets Potassium Iodide 1 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Used in syphilis, where the periosteum or fibrous portions of the softer organs are affected, and also where the more important organs have been attacked; in diseases of the glandular system, and to cause absorption of inflammatory effusions, as in pleurisy and pericarditis; for the relief of syphilitic and rheumatic pains; and in asthma and lead poisoning. **Dose:** for children, 1 tablet every hour with water. Dispense in glass.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

†Tablets Quinine and Camphor Compound, Squibb

(Coryza No. 3, Dr. Henry J. Kenyon)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Quinine Sulphate	$\frac{1}{2}$ gr.	} A favorite remedy in the treatment of acute coryza with violent sneezing and itching of the nostrils. It is a modification of the rhinitis formula, atropine being substituted for belladonna, and a small quantity of morphine added.
Camphor	$\frac{1}{2}$ gr.	
Morphine Sulphate	$\frac{1}{64}$ gr.	
Atropine Sulphate	$\frac{1}{2000}$ gr.	
Milk Sugar	q. s.	

tuted for belladonna, and a small quantity of morphine added. It is administered in repeated doses until the systemic effect of atropine upon the throat and the nasal discharge is observed, and then at less frequent intervals. **Dose:** 1 tablet every hour until the throat feels dry, then every 2 to 4 hours until symptoms improve, continuing the treatment in decreasing doses a day or two after the discharge has ceased. (NOTE.—These tablets should be used cautiously, and the possible formation of the morphine habit guarded against. For those physicians, who on general principles, object to the administration of morphine or heroin, Tablets Quinine, Camphor and Belladonna are suggested.)

†**Tablets Quinine and Camphor Compound No. 2,**
Squibb (Coryza No. 5, Dr. S. MacCuen Smith)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Quinine Sulphate	$\frac{1}{10}$ gr.	} These tablets have been used with good effects in recurrent attacks of coryza. They are given until the systemic effect of atropine is apparent, and then at longer intervals.
Camphor	$\frac{1}{4}$ gr.	
Morphine Sulphate	$\frac{1}{100}$ gr.	
Atropine Sulphate	$\frac{1}{600}$ gr.	
Acid Arsenous	$\frac{1}{240}$ gr.	
Strychnine Sulphate	$\frac{1}{240}$ gr.	

For those physicians who object on general principles to the administration of morphine, Tablets Quinine and Camphor Compound No. 5 are recommended. **Dose:** 1 tablet every 2 or 3 hours until the symptoms improve, or 4 tablets at bedtime, with plenty of water. (See Note under Tablets Quinine and Camphor Compound, above.)

†**Tablets Quinine and Camphor Compound No. 3,**
Squibb (Coryza)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Quinine Sulphate	$\frac{1}{2}$ gr.	} Very generally regarded as an excellent combination for averting attacks of acute coryza, the usual symptoms of muscular soreness, chilliness, hot, dry skin, sneezing and excessive nasal discharge
Camphor	$\frac{1}{2}$ gr.	
Opium Powdered	$\frac{1}{10}$ gr.	
Ammonium Chloride	$\frac{1}{2}$ gr.	
Ext. Belladonna	$\frac{1}{10}$ gr.	
Ext. Aconite	$\frac{1}{10}$ gr.	

being promptly arrested if the tablets are taken in the early stage. **Dose:** 2 tablets every hour or two until relieved. (See Note under Tablets Quinine and Camphor Compound, above; also Tablets Quinine, Camphor and Hyoscyamus Compound).

†**Tablets Quinine and Camphor Compound No. 4,**
Squibb (Coryza No. 2)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Quinine Sulphate	$\frac{1}{3}$ gr.	} Dose: for sudden colds, 2 tablets, then 1 every hour until the acute coryza disappears. (See Note under Tablets Quinine and Camphor Compound above.)
Camphor	$\frac{1}{3}$ gr.	
Opium Powdered	$\frac{1}{15}$	
Ammonium Chloride	$\frac{1}{3}$ gr.

Ext. Aconite	$\frac{1}{15}$ gr.	

Squibb's Tablets are made from the Squibb quality of ingredients and by improved processes that insure accurate dosage and rapid and complete disintegration or solution in the system, hence prompt and full therapeutic effect. Specify SQUIBB'S.

† **Tablets Quinine and Camphor Compound, No. 5, Squibb** (Coryza with Heroin)

C. T. Per 1000 Per 500 Per 100
Chocolate-coated (C. C. T.)

Quinine Sulphate	$\frac{1}{10}$ gr.	} These tablets are commonly employed in recurrent attacks of coryza with severe paroxysms of sneezing and itching of the nostrils. They are taken until the systemic effects of atropine are observed, and
Camphor	$\frac{1}{4}$ gr.	
Heroin Hydrochlor	$\frac{1}{100}$ gr.	
Atropine Sulphate	$\frac{1}{600}$ gr.	
Acid Arsenous	$\frac{1}{240}$ gr.	
Strychnine Sulphate	$\frac{1}{240}$ gr.	

then at longer intervals. Atropine, by its inhibitory action upon the nerves of the sensory glands of the nasal mucous membrane, arrests the discharge from the nose. Arsenic is highly recommended by Ringer for patients who suffer from frequent attacks of cold in the head. Camphor and quinine act as mild antipyretics. Heroin serves to allay cough and inflammation. **Dose:** 1 tablet every hour, for colds in the head, until the throat feels dry, then every two or three hours, continuing for a day or two after the acute coryza disappears. (See Note under Tablets Quinine and Camphor Compound, above.)

Tablets Quinine, Camphor and Belladonna, Full Strength, Squibb (Rhinitis, Full Strength)

C. T. Per 1000 Per 500 Per 100
Chocolate-coated (C. C. T.)

Quinine Sulphate	$\frac{1}{2}$ gr.	} These tablets are just twice the strength of the half-strength tablets regularly supplied, and are intended
Camphor	$\frac{1}{2}$ gr.	
Fluidext. Belladonna	$\frac{1}{4}$ min.	

for use particularly in robust patients. **Dose:** 1 tablet every half hour for 3 or 4 doses, or until the throat becomes dry, then in diminishing doses until the nasal discharge ceases.

* **Tablets Quinine, Camphor and Belladonna, Half Strength, Squibb**

(Rhinitis, Half Strength, Dr. Lincoln)

T. T. Per 1000 Per 500 Per 100
Chocolate-coated (C. C. T.)

Quinine Sulphate	$\frac{1}{4}$ gr.	} Acute attacks of rhinitis are as a rule markedly benefited by these tablets, it is claimed.
Camphor	$\frac{1}{4}$ gr.	
Fluidext. Belladonna	$\frac{1}{8}$ min.	

Taken at the onset and persisted in until the throat becomes dry, these tablets have been found to check the sneezing and discharge from the nostrils and frequently to cut short the attack. **Dose:** 1 tablet every half hour for four doses, then every hour or two until the constitutional effect of belladonna is observed, when the interval is lengthened to three hours and the tablets continued until the discharge from the nose disappears.

Tablets Quinine, Camphor and Hyoscyamus Compound, Squibb (Coryza Modified)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Quinine Sulphate	1/2 gr.	} This is a modification of Tablets Quinine and Camphor Compound No. 3 (Coryza), the powdered opium, being replaced by an equal quantity of extract hyoscyamus for the benefit of those physicians ob-
Camphor	1/2 gr.	
Ext. Hyoscyamus	1/10 gr.	
Ammonium Chloride	1/2 gr.	
Ext. Belladonna	1/10 gr.

(Dr. Wm. F. Kier)

' White or Pink-coated Per 1000 Per 500 Per 100

(W. C. T. or P. C. T.)

Quinine Bisulphate	3 gr.	} These tablets contain more quinine than Tablets Quinine and Capsicum and are hence more active as an Antiperiodic. Dose: 1 to 3 tablets with water every 3 or 4 hours.
Capsicum	1/4 gr.	

Tablets Quinine and Iron Compound, Squibb

(Aiken's Tonic)

C. T. Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Quinine Sulphate	1 gr.	} This combination is considered an excellent tonic in all weakened conditions of the system—overcoming anorexia, improving nutrition, stimulating metabolism and producing a general improvement in health. It is used in simple
Iron Reduced	2/3 gr.	
Acid Arsenous	1/50 gr.	
Strychnine Sulphate	1/50 gr.	
Extract Gentian	1/4 gr.	

This house supplies only one quality of each product: that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

Tablets Quinine and Iron Compound, Squibb (Cont.)

anemia, debility, and convalescence from acute disease. Special attention is given to the trituration of the ingredients so as to insure thorough subdivision and accurate dosage. **Dose:** 1 or 2 tablets three times a day, ten minutes before meals.

Tablets Quinine and Iron Compound with Cascarin, Squibb (Aiken's Tonic Laxative)

C. T.		Per 1000	Per 500	Per 100
Chocolate-coated (C. C. T.)				
Quinine Sulphate	1 gr.	}	This is a modification of the time-honored Aiken's Tonic formula, and is adapted to those cases where the patient habitually suffers from constipation, or where the reduced iron in the formula	
Iron Reduced	$2\frac{2}{3}$ gr.			
Cascarin	$1\frac{1}{2}$ gr.			
Acid Arsenous	$1\frac{1}{50}$ gr.			
Strychnine Sulphate	$1\frac{1}{50}$ gr.			
Extract Gentian	$1\frac{1}{4}$ gr.			

produces this effect. **Dose:** 1 or 2 tablets three times daily, before meals.

Tablets Quinine and Salol, Squibb

C. T.		Per 1000	Per 500	Per 100
Quinine Sulphate	$2\frac{1}{2}$ gr.	}	Quinine and salol have long been used in combination in the treatment of acute and chronic rheumatism, for the relief of neuralgic pains, and as a safeguard against infection in malarial climates. As it is of the utmost importance that tablets of this nature break up readily in the system, special pains are taken to cause these tablets and others of similar composition to disintegrate at once in the presence of moisture. This can readily be demonstrated by dropping a tablet in a spoonful of water at body temperature; should the tablet not readily respond to this test it should be condemned as being unfit for use. Dose: as an Analgesic or Antipyretic, 1 tablet every half hour for three doses, then every two to four hours; as a prophylactic, 1 tablet after meals and at bedtime.	
Salol (Phenyl Salicyl.)	$2\frac{1}{2}$ gr.			

Tablets Quinine, Strychnine and Iron. See Tablets Iron, Quinine and Strychnine.

Tablets Quinine Bisulphate 1 gr., Squibb

C. T. or C. C. T.	Per 1000	Per 500	Per 100
-------------------	----------	---------	---------

Quinine bisulphate is usually preferred to the sulphate where the acid secretion of the stomach is deficient, its more rapid absorption compensating for the lesser quantity of quinine alkaloid it contains. Employed as a tonic in debilitated conditions of the system, and for its antiperiodic and antipyretic action in sufficient dosage in malarial affections. **Dose:** 1 tablet after meals for Tonic and Antiperiodic effect; as an Antipyretic in children, 1 or 2 tablets every two hours.

Tablets Quinine Bisulphate 2 gr., Squibb

Per 1000 Per 500 Per 100

Tablets Rhubarb Compound, Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Chocolate-coated (C. C. T.)

Rhubarb	2 gr.	} For the treatment of habitual indigestion with constipation. Rhubarb is a tonic laxative. It may be given for long periods, it is said, without weakening the bowels. It acts pleasantly without griping and without tenesmus. Combined with aloes, which acts upon the lower bowel and the rectum, it stimulates all parts of the intestinal tract. Myrrh acts as a mild astringent and peppermint modifies the laxative action. Dose: 1 tablet after meals.
Myrrh	1 gr.	
Aloes Purified	1 1/2 gr.	
Oil Peppermint	1/10 min.	

Tablets Rhubarb and Ipecac Compound, Squibb

(Roosevelt Hospital)

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Rhubarb	1 gr.	} Special attention is given to all our rhubarb combinations, and they will be found superior products. Not alone is the rhubarb used of best quality, but in the manufacture decomposition of the ingredients is prevented and the tablets present a handsome appearance and are very acceptable to the taste. This combination is used in habitual indigestion with loss of appetite, coated tongue, bad breath and constipation, stimulating digestion, preventing fermentation, correcting acidity and relieving constipation. The cutaneous eruptions observed on the faces of patients with chronic dyspepsia are said to be greatly reduced, often cured, by treatment with these tablets. Dose: 1 tablet after meals.
Ipecac	1/8 gr.	
Sodium Bicarbonate	5 gr.	
Oil Peppermint	1/20 min.	

Tablets Rhubarb and Ipecac Compound No. 2, Squibb
(Roosevelt Hospital)

Per 1000 Per 500 Per 100

C. T.

Rhubarb	2 gr.	} A modification of Tablets Rhubarb and Ipecac Compound Squibb; the quantity of rhubarb being doubled. Preferred where the constipation is more pronounced. Dose: 1 tablet after meals.
Ipecac	$\frac{1}{8}$

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

Tablets Saccharin (Soluble) 1 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Dose: 1 tablet for a cup of coffee or tea.

Tablets Salol (Phenyl Salicylate) 1 gr., Squibb

T. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Salol is regarded as a safe and efficient Intestinal Antiseptic. It is not affected by the gastric juice, but is decomposed by the alkaline secretions of the small intestine into salicylic acid and phenol, which products tend to correct morbid conditions of the intestinal tract. It is also used in the treatment of acute and chronic rheumatism, lumbago and sciatica. Owing to the fact that salol is largely excreted by the kidneys as salicyluric acid, it is used in chronic inflammation of the bladder, gonorrhea and catheter fever. It rarely produces nausea or gastric disturbance it is stated; but where the renal functions are impaired or constipation exists, toxic action may manifest itself. Tablets Salol Squibb disintegrate rapidly, and are the best method for administering this remedy. Dose: 1 to 4 tablets every two or three hours. [NOTE: Tablets containing salol should not be exposed to direct sunlight or kept in a warm place, else they will not disintegrate quickly.]

Tablets Salol (Phenyl Salicylate) 2½ gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Dose: as an Intestinal Antiseptic, 1 or 2 tablets an hour before meals and two hours afterwards; for rheumatism, 1 or 2 tablets every hour until relieved; for catheter fever, gonorrhea and inflammation of the bladder, 1 tablet every two hours.

Tablets Salol (Phenyl Salicylate) 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Dose: as an Intestinal Antiseptic, 1 tablet every three or four hours; in acute rheumatism, 1 to 4 tablets every two or three hours.

Tablets Silver Nitrate 1 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

These tablets are made from pure silver nitrate by careful compression and without undue exposure; they dissolve readily in distilled water, yielding a clear solution. One tablet dissolved in an ounce of water yields about a 1:500 solution. They are used for the extemporaneous preparation of collyria or injections, for which purpose they are admirably adapted. They darken by exposure to light, and are therefore furnished in black bottles. A slight blackening of the surface of the tablets, which is liable to occur in process of manufacture, should not condemn the tablet, as it usually occurs on the surface only and is difficult to prevent. **Directions:** For solution, 1 tablet dissolved in 100 minims of water or 5 tablets to 1 fluidounce yields about a 1 percent. solution, and 1 tablet in 50 minims of water about a 2 percent. solution; these are used for instillation into the eyes of newborn infants to prevent gonorrheal ophthalmia. Only distilled water should be used and the solution protected from light.

Chocolate-coated (C. C. T.)

Silver Nitrate	$\frac{1}{4}$ gr.	} Nitrate of silver is a powerful Astringent to mucous surfaces. It has been found useful in inflamed conditions of the stomach and intestines, as in gastritis, chronic ulcer
Ext. Opium	$\frac{1}{8}$ gr.	
Ext. Nux Vomica	$\frac{1}{4}$ gr.	
Ext. Belladonna	$\frac{1}{8}$ gr.	
Potassium Nitrate	$\frac{1}{2}$ gr.	

and diarrhea. The pain often produced by its ingestion is here guarded against by the opium and belladonna present. Pigmentation of the skin sometimes follows the continued use of these tablets, as it does with silver salts generally. Dose: 1 tablet with water an hour before eating; as an intestinal astringent, 1 tablet one or two hours after meals.

Tablets Soda and Rhubarb. See Tablets Rhubarb and Soda.

Tablets Soda-Mint, Squibb

Per 1000 Per 500 Per 100

C. T.

Screw-cap pocket vials per doz.,

Sodium Bicarbonate	$4\frac{3}{4}$ gr.	} This is an agreeable Antacid and gastric stimulant, employed in nausea, hyperacidity, flatulence and indigestion.
Ammonium Carbonate	$\frac{1}{4}$ gr.	
Oil Peppermint	q. s.	

Squibb's highly purified sodium bicarbonate is used in these tablets, and they will be found more palatable than similar preparations. The presence of ammonium carbonate in the formula adds very much to their prompt therapeutic action, especially in cases where faintness is a symptom. Dose: 1 or 2 tablets repeated as required, allowed to dissolve in the mouth or taken with a swallow of water.

Tablets Soda-Mint and Pepsin, Squibb

Per 1000 Per 500 Per 100

C. T.

Sodium Bicarbonate	$4\frac{1}{2}$ gr.	} This combination at times gives relief in some forms of indigestion where there is an excessive secretion of hydrochloric acid. In these cases
Ammonium Carbonate	$\frac{1}{4}$ gr.	
Pepsin	1 gr.	
Oil Peppermint	q. s.	

the tablets are administered directly after meals. Dose: 1 or 2 tablets, repeated as required.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Tablets Sodium Benzoate 5 gr., Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

C. T.

Sodium benzoate is employed as an Antiseptic and Anti-rheumatic: in rheumatism, cystitis, gout, follicular tonsillitis, coryza, etc. **Dose:** 1 to 2 tablets three or four times a day, with a glass of water, between meals; in tonsillitis and thrush, 1 tablet allowed to dissolve slowly in the mouth every two hours.

Tablets Sodium Bicarbonate 5 gr., Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

C. T.

These tablets are made from Squibb's high quality sodium bicarbonate, which is perfectly free from carbonate and hence without the bitter taste common to the regular market article. They are used for correcting acidity of the stomach, heartburn, and allied disturbances. **Dose:** 1 or 2 tablets after meals, or as required, to be repeated if necessary in half an hour.

Tablets Sodium Bicarbonate and Bismuth. See Tablets Bismuth and Sodium Bicarbonate.**Tablets Sodium Bicarbonate and Magnesia, Squibb**

young children the tablets are crushed and mixed with a little water in a spoon. **Dose:** for infants, 1 to 3 tablets a day; for children one year or over, 3 tablets three times a day, increasing or reducing the dose as effect is produced.

Tablets Sodium Salicylate 3 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
--------------	-----------------	----------------	----------------

Sodium salicylate is an Antiferment and Antirheumatic. It increases the excretion of urea and uric acid and corrects gastric and intestinal fermentation. In acute rheumatism it commonly allays pain and fever, reduces the swelling and inflammation and prevents cardiac complications. It is deemed useful also in chronic rheumatism and for the relief of neuralgic and sciatic pains. Its administration occasionally produces nausea, and it should not be given during the process of digestion. Strontium salicylate is usually substituted where the sodium salt disagrees with the patient. **Dose:** 1 tablet every two or three hours, with water.

Tablets Sodium Salicylate 5 gr., Squibb

Tablets Sodium Salicylate from Natural Acid, 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
--------------	-----------------	----------------	----------------

By some practitioners sodium salicylate prepared from natural salicylic acid (so-called "true" salicylic acid) is claimed to be better borne by the stomach and to be therapeutically more active than that made from the synthetic acid. While this may be true when impure salicylic acid is used in the preparation of the sodium salicylate, it is extremely doubtful whether the natural product offers any advantages over a properly made

Tablets Sodium Salicylate from Natural Acid, 5 gr., Squibb (Cont.)

and pure synthetic preparation. As there exists, however, a demand for this article, we have added these tablets to our list. **Dose:** 1 to 3 tablets every three or four hours, with water.

† Tablets Sodium Salicylate and Colchicine Compound, Squibb (Rheumatism, Dr. Liggett)

C. T.		Per 1000	Per 500	Per 100
Sodium Salicylate	5 gr.	Sodium salicylate is generally conceded to be an efficient remedy in articular rheumatism, relieving pain and inflammation and reducing the fever. Colchicine favors elimination of effete material, and frequently aborts an attack. Codeine contributes a mild anodyne effect. These tablets have been found efficient in the treatment of acute and chronic attacks of rheumatism and gout. Dose: 1 tablet every three or four hours, with water, until the pain abates or the bowels move freely.		
Colchicine	$\frac{1}{120}$ gr.			
Codeine Sulphate	$\frac{1}{16}$ gr.			

† Tablets Sodium Salicylate and Colchicum Compound, No. 2, Squibb (Antirheumatic No. 3)

C. T.		Per 1000	Per 500	Per 100
Sodium Salicylate	$7\frac{1}{2}$ gr.	These tablets have been found useful in acute and chronic rheumatism, arthritis, and rheumatic pharyngitis. They contain a larger dose of sodium salicylate than other combinations listed, while the presence of sodium bicarbonate tends to lessen gastric irritation and correct hyperacidity. The addition of wintergreen renders them more palatable. Dose: 1 or 2 tablets every three or four hours.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Tablets Sodium Succinate 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
-------	----------	---------	---------

Sodium Succinate has latterly come into vogue as a Cholagogue and Alternative for use in the treatment of cholecystitis, cholelithiasis and catarrhal conditions of the gall bladder and bile duct. Clinical experience seems to prove that often under its prolonged use paroxysms of biliary colic become less frequent and less intense and sometimes cease entirely. By virtue of its cholagogue action, it tends to limit the formation of calculi and to aid in their elimination. **Dose:** 1 or 2 tablets three or four times a day. A saline cathartic should occasionally be given.

† Tablets Sparteine Compound, Squibb

(Cardiac, Dr. Waldstein)

C. T.		Per 1000	Per 500	Per 100
Sparteine Sulphate	$\frac{1}{10}$ gr.	These tablets are used in rapid heart action with irregular pulse, hurried respiration and derangement of the functions of the kidneys. Dose: 1 tablet every 3 or 4 hours,

Iron Carbonate Sacch. 1 gr.	}	This formula is a modification of the preceding one, to which an iron tonic and a cough sedative have been added. Dose: 1 or 2 tablets every three or four hours.
---	---	--

NOTE.—These tablets should be used cautiously and the possible formation of the morphine habit guarded against.

† Tablets Terpin Hydrate and Heroin, Squibb

C. T.

Per 1000 Per 500 Per 100

Terpin Hydrate 2 1/2 gr. } Diacetylmorphine (Heroin) 1/50 gr. }	}	This formula is used to control cough in acute and chronic bronchitis, pneumonia, grip and phthisis. Terpin
--	---	---

hydrate is a stimulating expectorant, with antiseptic properties. In moderate doses it causes increased secretion of bronchial mucus, facilitates expectoration, and may be continued without interfering with the appetite or digestion. Diacetylmorphine serves to allay cough, deepen respiration and quiet the pulse. **Dose:** 1 or 2 tablets every two or three hours until the cough is quieted, then at longer intervals. **NOTE.**—These tablets should be used cautiously and the possible formation of the morphine habit guarded against.

†**Tablets Terpin Hydrate and Heroin Compound,**
Squibb (Cough Sedative, Dr. F. W. Shaw)
C. T. Per 1000 Per 500 Per 100

Terpin Hydrate	2½ gr.	} This combination is found useful in cough with irritated throat and painful expectoration. Dose: 1 tablet every two or three hours until the cough abates, then at longer intervals. NOTE. —These tablets should be used cautiously and the possible formation of the morphine habit guarded against.
Diacetylmorph. (Heroin)	1/50 gr.	
Pilocarpine Hydrochloride	1/100 gr.	
Potassium Dichromate	1/200 gr.	

Tablets Three Iodides, Squibb
Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Mercury Iodide Red	1/30 gr.	} Cutaneous diseases of a scaly nature, chronic rheumatism and tertiary syphilis are indications for the use of this formula. It represents three of the most powerful alteratives, which act upon the blood and absorbent system, increase elimination of waste products, and by overcoming the impoverished state of the blood, tend to bring about a restoration of health. Dose: 1 tablet, with water, three or four times a day.
Arsenic Iodide	1/40 gr.	
Iron Iodide	1/12 gr.	

Tablets Three Valerates, Squibb
(Three Valerianates) Per 1000 Per 500 Per 100
Chocolate-coated (C. C. T.)

Iron Valerate	1 gr.	} For the relief of the nervous symptoms usually seen in hysterical subjects, these tablets are often used with decided beneficial results. They act as an Antispasmodic, Nervine and Tonic. The disagreeable odor of the ingredients is well masked by the coating, and patients as a rule do not object to their administration. Dose: 1 or 2 tablets after meals, with water.
Quinine Valerate	1 gr.	
Zinc Valerate	1 gr.	

Tablets, Throat (Dr. Quinlan). See Tablets Acid Benzoic and Belladonna Compound.

Tablets Thyroid Gland 2 gr., Squibb
C. T. Per 1000 Per 500 Per 100

These tablets are prepared from the thyroid glands of sheep, freed from fat, carefully cleaned and dried at low temperature. Each tablet represents 10 grains of the *fresh* gland in the state of full therapeutic activity. Thyroid glands have been used as an Alterative, Hemostatic and Antifat, in myxedema, obesity, struma, obstinate hemorrhage and cretinism. **Dose:** 1 tablet 3 times a day, gradually increased in accordance with the tolerance of the patient.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Tablets Thyroid Gland 5 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
--------------	-----------------	----------------	----------------

Dose: 1 tablet 3 times a day, gradually increased and adapted to the tolerance of the patient.

Tablets Triple Arsenates, Squibb

(Dr. G. H. Hill)	Per 1000	Per 500	Per 100
------------------	-----------------	----------------	----------------

Chocolate-coated (C. C. T.)

Iron Arsenate	$\frac{1}{30}$ gr.	} These tablets have been used with reputed success in obstinate malarial affections, anemia and general debilitated conditions. They possess Tonic and Alterative properties, and by their action upon the blood and nutrition have been shown to overcome the depraved state of the system. By thorough trituration accurate dosage is assured; and as the tablets are prepared so that they rapidly disintegrate in the stomach, prompt and uniform therapeutic effects may confidently be expected. Dose: 1 tablet with water after meals.
Quinine Arsenate	$\frac{1}{30}$ gr.	
Strychnine Arsenate	$\frac{1}{60}$ gr.	

Tablets Triple Bromides, Squibb

C. T.	Per 1000	Per 500	Per 100
Sodium Bromide 21½ gr.	}	}	}
Potassium Bromide 21½ gr.			
Ammonium Bromide 21½ gr.			
The bromides are employed in nervous excitement due to nerve irritation, but not when caused by derangement of nerve function due to exhaustion. This tablet is employed in wakefulness and nervous conditions from overwork or worry, hysteria, chorea, epilepsy, tetanus, nausea, seasickness, and as a Nerve Sedative generally. Dose: 1 to 4 tablets, dissolved in water, every three hours until effective.			

Tablets Triple Bromides No. 2, Squibb

C. T.		Per 1000	Per 500	Per 100
Sodium Bromide	5 gr.	} These tablets are just twice the strength of the preceding. Dose: 1 or 2 tablets, dis- solved in water, three or four times daily, as a Nerve Sedative in epilepsy, etc.		
Potassium Bromide	5 gr.			
Ammonium Bromide	5 gr.			

Tablets Triple Bromides Effervescent, Squibb

C. T.	Bottle of 25,	; bottle of 100,
Ammonium Bromide	3 gr.	This formula represents a pleasant, effervescent combination of the three commonly prescribed bromides, twice the strength of the regular formula. Dose: 1 or 2 tablets with water, taken while effervescing, three or four times a day. Keep the bottle well corked and in a dry place, and dispense the tablets only in bottles.
Sodium Bromide	6 gr.	
Potassium Bromide	6 gr.	

Tablets Triple Bromides and Cannabis Compound, Squibb (Sedative)

C. T.	Per 1000	Per 500	Per 100	
Sodium Bromide	21½ gr.	} Where the use of the bromides must be continued for any length of time this combination is said to exert a better sedative effect and cause less systemic disturbance than the individual doses of the separate salts. Tolerance is still further assisted by the modifying action of the hyoscyamus and the cannabis. These tablets are used in excited and irritable states of the nervous system, in wakefulness caused by overwork or worry, in hysteria, epilepsy, delirium, and to control seminal emissions and sexual excitement generally. Dispense in glass. Dose: 1 tablet every half hour or hour for three or four doses, dissolved in water.		
Potassium Bromide	21½ gr.			
Ammonium Bromide	21½ gr.			
Tr. Cannabis U.S.P. '90	5 min			
Tincture Hyoscyamus	5 min.			

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Tablets Triple Bromides and Hyoscyamus Compound, Squibb (Triple Bromides and Physostigma Comp.; Epileptic, Dr. Batton) Per 1000 Per 500 Per 100

C. T.

Sodium Bromide	3 gr.	} Used mainly in epilepsy with reputed success. Dose: 2 tablets three times a day, with water. Dispense in glass.
Ammonium Bromide	3 gr.	
Potassium Bromide	3 gr.	
Extract Hyoscyamus	$\frac{1}{2}$ gr.	
Tincture Physostigma	$2\frac{1}{2}$ min.	

Tablets Triplex. See Tablets Aloes, Mercury and Podophyllin.

†**Tablets, Tully's, 2 $\frac{1}{2}$ gr., Squibb**

Per 1000 Per 500 Per 100

T. T.

Morphine Sulphate	$\frac{3}{80}$ gr.	} These tablets represent the active ingredients of Tully's Powder (Powder Morphine Compound), part of the licorice root and all of the chalk being omitted, however. They are used for their Diaphoretic and Soporific effects in the early stages of bronchial attacks, similarly to Dover's Powder, the therapeutic action of the two preparations being alike. Dose: 1 tablet every two or three hours until relieved; or 4 tablets at bedtime, with a hot drink.
Camphor Powdered	$\frac{4}{5}$ gr.	

Tablets Urease, 0.1 Gm., Squibb Per 100

For the rapid estimation of urea in urine, blood, etc. (See Urease [Part I]). Write for complete literature.

Tablets, Uterine Tonic. See Tablets Ergot and Hydrastine.

Tablets, Vaginal Astringent. See Tablets Zinc Sulphate and Tannic Acid Compound.

Tablets Valerates, Three. See Tablets Three Valerates.

Tablets Viburnum Compound, Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Ext. Viburnum Prunifol.	1 gr.	} A combination of several drugs, believed to act as a tonic to the uterine organs, allay inflammation and pain and relieve congestion. In painful menstruation and where the flow is scanty or too profuse they are said to be of benefit. Dose: 1 or 2 tablets every two or three hours with a swallow of hot tea, beginning the treatment several days before the expected period.
Ext. Viburnum Opulus	1 gr.	
Ext. Aletris Farinosa	$\frac{1}{2}$ gr.	
Ext. Helonias Dioica	$\frac{1}{2}$ gr.	
Ext. Mitchella Repens	$\frac{1}{2}$ gr.	
Calophyllin	$\frac{1}{4}$ gr.	

Tablets Viburnum Compound No. 2, Squibb

(Endometritis)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Ext. Viburnum Prunifol.	2 gr.	} This formula is used in relaxed and painful conditions of the uterine organs; in endometritis, alone or in conjunction with topical applications; in dysmenorrhea and
Ext. Hamamelis	1 gr.	
Ext. Ergot	1/2 gr.	
Ext. Nux Vomica	1/12 gr.	
Hydrastin	1/16 gr.	

metrorrhagia. The extracts in this formula are carefully prepared at our own laboratories, and are incorporated into tablets without heat, so that none of their therapeutic properties are destroyed. **Dose:** 1 tablet 3 or 4 times a day.

Tablets Warburg's Tincture, Squibb

(With Aloes)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

These tablets are prepared by careful evaporation of Warburg's Tincture at low temperature, and possess the full therapeutic activity of the preparation. Each tablet represents one teaspoonful of the tincture. They have been used in malarial disorders with much benefit, but at times under their continued administration the laxative effect may be too great. **Dose:** 1 or 2 tablets 3 or 4 times a day, decreasing the dose or alternating with Tablets Warburg's Tincture *without aloes* if the bowels move too freely.

Tablets Warburg's Tincture without Aloes, Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Warburg's Tincture is often effective in chronic malarial conditions, where the usual remedies are of no avail. The tincture used in these tablets is carefully evaporated at low temperature, so that none of the volatile ingredients are lost. The tablets represent the full potency of the formula in an active and soluble form. **Dose:** 1 or 2 tablets three times a day, after meals, preceding the treatment by an active cathartic.

Tablets Warburg's Tincture Improved, Squibb

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Warburg's Tincture	} The addition of arsenous acid to Warburg's Tincture serves to greatly improve its Antimalarial effect. Dose:
(without aloes)	
Acid Arsenous	1/100 gr.

1 or 2 tablets three times a day, after meals.

Tablets Wash Astringent. See Tablets Lead and Zinc Compound.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

Tablets Zinc Phosphide and Cannabis Compound, Squibb (Neuralgic, Dr. Kenyon)

T. T. Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Zinc Phosphide	1/16 gr.	} These tablets are employed in pains caused by derangement of nerve functions. In neuralgias, sciatica, and spasmodic pains generally, they lessen nerve irritability and
Extract Cannabis	1/8 gr.	
Strychnine Sulphate	1/60 gr.	
Sodium Arsenite	1/20 gr.	
Aconitine	1/400 gr.	

excitement, and, by improving the nutrition of the nerves, tend to prevent a recurrence of the neuralgic attacks. **Dose:** 1 tablet every two hours for three doses, then every three or four hours.

Tablets Zinc Phosphide, Cannabis and Nux, Squibb (Nerve Tonic No. 5)

Per 1000 Per 500 Per 100

Chocolate-coated (C. C. T.)

Zinc Phosphide	1/8 gr.	} The action of these tablets is that of a Nerve Tonic and Stimulant. They are used mainly to control nervous
Extract Cannabis	1/8 gr.	
Ext. Nux Vomica	1/8 gr.	

irritability. **Dose:** 1 tablet with water after meals.

Tablets Zinc Sulphate 1 gr., Squibb

C. T. Per 1000 Per 500 Per 100

These tablets contain only the Squibb quality of pure zinc sulphate, hence dissolve freely and yield a clear solution in distilled water. They are intended for the convenient preparation of astringent solutions. **Directions:** Dissolve 1 to 3 tablets in 1 fluidounce distilled water, for use as a collyrium, injection or local astringent application.

Tablets Zinc Sulphate and Tannic Acid Compound, Squibb (Vaginal Astringent)

C. T. Per 500 Per 100

Zinc Sulphate	2 gr.	} For preparing vaginal douches that are used as an Astringent and Tonic to the vaginal mucous membrane, arrest discharge, and lessen inflammation. These tablets dissolve
Acid Tannic	2 gr.	
Alum	3 gr.	
Acid Boric	6 gr.	
Fl. Gold. Seal, Colorl.	1 min.	

quickly in water and are very convenient. They are said to restore tonicity, remove foul odors, lessen discharge and to be useful also in septic conditions and relaxed states of the mucous membrane. **Directions:** 1 or more tablets, depending upon the symptoms, are dissolved in a quart of hot water and employed as a vaginal douche.

Tablets Zinc Sulphocarbolate 2 gr., Squibb

C. T.	Per 1000	Per 500	Per 100
--------------	-----------------	----------------	----------------

This formula is used for its Astringent and Antiseptic effect in intestinal catarrh attended with flatulence, fermentation and inflammation. In typhoid fever, enteritis, tuberculous diarrhea and dysentery it is also said to act well. **Dose:** 1 tablet every two hours with water.

*** Tablets, Zinc Sulphocarbolate and Calomel Compound, Squibb**

(Cholera Infantum, Dr. Fenwick)

T. T.	Per 1000	Per 500	Per 100
--------------	-----------------	----------------	----------------

Zinc Sulphocarb.	1/20 gr.	} In the treatment of fermentative diarrhea in children, this formula has proved very effective, acting as an Antiseptic, Sedative and Astringent. Dose: for infants six months to one year old, 1 tablet every ten minutes for the first hour, then every half hour or hour until relieved.
Calomel	1/60 gr.	
Salol	1/10 gr.	
Bismuth Subnitrate	1/2 gr.	
Pepsin	1/4 gr.	

Tablets Zinc Sulphocarbolate Compound, Squibb

(Intestinal Antiseptic)

C. T.	Per 1000	Per 500	Per 100
--------------	-----------------	----------------	----------------

Zinc Sulphocarb.	1/2 gr.	} Disordered digestion, coated tongue, flatulence and intestinal catarrh are the indications for the use of this formula. Copper arsenite acts as an alterative and antiseptic and is ranked among the best remedies in intestinal indigestion and diarrhea, acting equally well in acute or chronic cases. Betanaphthol is considered a reliable antiseptic. Zinc sulphocarbolate and bismuth subgallate tend to overcome atonic conditions of the mucous membrane and to allay the irritable and inflammatory state of the alimentary canal. Dose: 1 or 2 tablets with water every three or four hours until relieved; then 1 tablet after meals.
Bismuth Subgallate	2 gr.	
Betanaphthol	1/2 gr.	
Copper Arsenite	1/200 gr.	
Oil Cinnamon	q. s.

Of grain leather, and containing 90 tubes of Hypodermic Tablets representing a comprehensive assortment for stock.

LOZENGES

Lozenges Acid Carbolic and Menthol, Squibb (Antiseptic Mouth and Throat)

	Per 1000	Per 500	Per 100
Acid Carbolic	$\frac{1}{40}$ gr.	Useful in inflamed conditions of the mouth and throat, for correcting bad breath due to decayed teeth, in catarrh and disordered stomach, and as a prophylactic against contagion. Dose: 1 lozenge dissolved in the mouth at frequent intervals until relieved.	
Menthol	$\frac{1}{30}$ gr.		
Oil Sassafras			
Sugar			
Acacia, of each	q. s.		

Lozenges Astringent Throat. See Lozenges Benzoic Acid and Catechu Compound.

†Lozenges Benzoic Acid and Catechu Compound, Squibb (Astringent Throat)

	Per 1000	Per 500	Per 100
Acid Benzoic	$\frac{1}{5}$ gr.	Local Astringent and Sedative, in sore and inflamed throat with cough and hoarseness. Dose: 1 lozenge on the tongue every half hour or hour for four or five doses, then at longer intervals until relieved.	
Catechu	$\frac{1}{4}$ gr.		
Opium Powdered	$\frac{1}{50}$ gr.		
Camphor	$\frac{1}{20}$ gr.		
Ext. Yerba Santa	$\frac{1}{4}$ gr.		
Sugar and Aromatics	q. s.		

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Lozenges Bronchial. See Lozenges Cubeb and Hyoscyamus Compound.

†**Lozenges Brown Mixture 7 gr., Squibb**

	Per 1000	Per 500	Per 100
Opium Powdered	1/20 gr.	Bronchial irritation and cough are allayed by these lozenges. They are of convenient size for holding in the mouth and very palatable, and the small dose of medicament admits of their frequent use. Useful in relieving inflammation of the mucous membrane, hoarseness, and oppression of the chest, and in facilitating expectoration. Dose: 1 lozenge every half hour or hour allowed to dissolve upon the tongue. Stopped when secretion is well established or slight nausea occurs.	
Acid Benzoic	1/20 gr.		
Camphor Powdered	1/20 gr.		
Tartar Emetic	1/40 gr.		
Oil Anise			
Licorice			
Sugar, of each	q. s.		

†**Lozenges Brown Mixture with Ammonium Chloride. 7 gr., Squibb**

Per 1000 Per 500 Per 100

The preceding, with 1 grain ammonium chloride added.

Lozenges Brown Mixture 20 gr., Squibb

(75 min. Brown Mixture)

bottle, lb.,

screw-cap vials containing 35, per doz.

Opium Powdered	3/80 gr.	Dose: 1 lozenge every half hour or hour, allowed to dissolve on the tongue; to be discontinued when expectoration is well established or nausea occurs.
Acid Benzoic	3/80 gr.	
Camphor Powdered	3/80 gr.	
Tartar Emetic	3/160 gr.	
Oil Anise, Licorice,		
Sugar of each	q. s.	

Lozenges Brown Mixture with Ammonium Chloride, 20 gr., Squibb

bottle, lb

The preceding, with 3 grains ammonium chloride added.

Lozenges Cubeb and Hyoscyamus Compound, Squibb

(Bronchial)

	Per 1000	Per 500	Per 100
Oleoresin Cubeb	1/3 gr.	These lozenges act as a stimulating Expectorant, and mild Anodyne. They may be used freely without disturbing the stomach, it is said, and have been found useful in allaying bronchial irritation and cough. Dose: 1 lozenge dissolved on the tongue every half hour or hour until relieved.	
Hyoscyamus	1/4 gr.		
Ammonium Chloride	1/3 gr.		
Ext. Licorice	1 gr.		
Balsam Tolu	1/5 gr.		
Senega	1/5 gr.		
Ipecac	1/50 gr.		

†**Lozenges Menthol and Cocaine Compound, Squibb**
(Mentholated Throat)

	Per 1000	Per 500	Per 100
Menthol	1/35 gr.	Used in vocal fatigue of public speakers or singers. They are said to act as a stimulant to the vocal cords, overcome irritation and strengthen the voice, and, in sore throat, to relieve the soreness and pain.	
Cocaine Hydrochl.	1/280 gr.		
Oil Anise	1/80 min.		
Acid Benzoic	1/12 gr.		
Eucalyptol	1/15 gr.		
Sugar	q. s.		

Dose: 1 lozenge dissolved in the mouth every fifteen minutes or half hour as necessary.

Lozenges Orthoform 1/4 gr., Squibb

	Per 1000	Per 500	Per 100
--	----------	---------	---------

Orthoform is a local anesthetic which has been recommended in lozenge form to relieve the pain of swallowing in ulcerated and tuberculous sore throat. It is claimed to be non-poisonous, and to be without any effect upon the mucous membrane save that of a powerful anesthetic wherever nerve endings are exposed. In dysphagia, if taken about ten minutes before meals, it usually relieves the pain of swallowing and enables the patient to take food without discomfort. **Dose:** 1 or 2 lozenges allowed to dissolve in the mouth as occasion requires.

Lozenges, Throat, Mentholated. See Lozenges Menthol and Cocaine Compound.

TROCHES

14 grainseach, 500 to the pound.

Troches Acid Tannic, Squibb

	Per 1000	Per 500	Per 100
--	----------	---------	---------

Trochisci Acidi Tannici. Each containing 1 grain (0.065 Gm.) tannic acid. Astringent, in mouth and throat troubles.

Troches Ammonium Chloride, Squibb

	Per 1000	Per 500	Per 100
--	----------	---------	---------

Trochisci Ammonii Chloridi. 1 1/2 grains pure ammonium chloride, with extract licorice, tragacanth, sugar and syrup tolu. Expectorant, Antiseptic; in throat and bronchial ailments.

Troches Catechu, Squibb

	Per 1000	Per 500	Per 100
--	----------	---------	---------

Trochisci Gambir, N. F. Dropped from U. S. P. 1 grain in each. Used in mouth and throat inflammations.

Squibb's Tablets are made from the Squibb quality of ingredients and by improved processes that insure accurate dosage and rapid and complete disintegration or solution in the system, hence prompt and full therapeutic effect. Specify SQUIBB'S.

Troches Charcoal, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

Trochisci Carbonis Ligni, N. F. About 4.6 grains wood charcoal. Absorbent, in fermentative conditions of the gastrointestinal tract.

Troches Cubeb, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

Trochisci Cubebæ. 0.3 grain (0.02 Gm.) oleoresin cubeb. Used in bronchial troubles and throat irritation.

Troches Cubeb Square, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

One-half strength of preceding.

†Troches Cubeb Compound, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

0.3 grain oleoresin cubeb, $\frac{1}{40}$ grain each of tartar emetic and morphine sulphate; thus having the medicinal constituents necessary to give a further expectorant and alterative together with sedative effect in cases requiring such.

†Troches Cubeb Compound Square, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

One-half strength of preceding.

Troches Elm, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

Trochisci Ulmi, N. F. About 3 grains slippery elm bark, flavored with methyl salicylate. Demulcent.

Troches Gambir. See Troches Catechu.**†Troches Glycyrrhiza and Opium, Squibb**

Per 1000	Per 500	Per 100
----------	---------	---------

Opium Lozenges; Wistar's Cough Lozenges. Formerly official. $\frac{1}{12}$ grain powdered opium, with extract glycyrrhiza, acacia, sugar and oil anise.

Troches Krameria, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

Formerly official. 1 grain extract krameria. Astringent; in mouth and throat inflammations.

Troches Magnesia, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

Containing magnesia, nutmeg, sugar and tragacanth. Antacid, Carminative. Dose: 2 or more.

Troches Peppermint, Squibb

Per 1000	Per 500	Per 100
----------	---------	---------

Trochisci Menthæ Piperitæ. $\frac{1}{6}$ minim oil peppermint in each. Used as breath perfume and carminative.

Troches Phenolphthalein, Squibb

Per 1000 Per 500 Per 100

Trochisci Phenolphthaleini, N. F. About 1 grain phenolphthalein. Laxative Confection. Average Dose: 1 troche.

Troches Potassium Chlorate, Squibb

Per 1000 Per 500 Per 100

Trochisci Potassii Chloratis. $2\frac{1}{2}$ grains potassium chlorate. Used mainly in aphthæ.

Troches Quinine Tannate, Squibb

Per 1000 Per 500 Per 100

Trochisci Quinina Tannatis, N. F. About 1 grain quinine tannate. Nonbitter form of quinine medication, especially intended for use by children and others having a repugnance for the bitter taste of quinine sulphate. Average Dose: 1 troche.

Troches Santonin, Squibb

Per 1000 Per 500 Per 100

Trochisci Santonini, N. F.; Worm Lozenges. $\frac{1}{2}$ grain santonin. Dose: 1 or 2.

Troches Santonin Compound, Squibb

Per 1000 Per 500 Per 100

Trochisci Santonini Compositi, N. F. About $\frac{1}{2}$ grain each santonin and calomel. Vermicide. Average Dose: 1 troche. (See also Tablets.)

Troches Sodium Bicarbonate, Squibb

Per 1000 Per 500 Per 100

Trochisci Sodii Bicarbonatis. $4\frac{1}{2}$ grains sodium bicarbonate. Antacid. Dose: as needed.

Troches Sulphur and Cream Tartar, Squibb

Per 1000 Per 500 Per 100

Trochisci Sulphuris et Potassii Bitartratis, N. F. About $4\frac{1}{2}$ grains washed sulphur and 1 grain cream of tartar. Alterative and Antipyric, used chiefly in chronic skin diseases. Average Dose: 1 troche. (See also Tablets Sulphur Compound.)

PART III

Biological Products

THE Squibb Line of Antitoxins, Serums and Bacterial Vaccines is a comprehensive one, yet it does not include any article of doubtful or unapproved efficiency. The products are made in our new Research and Biological Laboratories at New Brunswick, N. J. These are elaborately equipped and thoroughly up to date in their scientific appointments and apparatus, and are under the personal direction of Dr. John F. Anderson, formerly Director of the Hygienic Laboratory of the U. S. Public Health Service.

The Squibb Serums are small in bulk, high in potency, and low in total solids. They have been carefully tested by laboratory biological tests and the clinical effect of each has been noted on the specific disease for which it is of value. They have been especially treated to eliminate serum sickness and anaphylaxis.

The Squibb Vaccines are prepared according to the most improved methods. Many strains of each organism are used in preparing the stock vaccine.

The Squibb Antitoxins, Vaccines, and Serums, except the Anti-Meningitic, are distributed in our special aseptic syringes, which may be depended upon to give excellent service. The Vaccines are furnished also in aseptic ampuls accompanied by a syringe to each package. Squibb's Anti-Meningitic Serum is distributed in our special Gravity Apparatus, which has the advantage of supplying the serum in sterile container ready for use by the gravity method, by which latter the danger of causing shock through the injection is much minimized.

The directions, as furnished with each Squibb product, are comprehensive and indicate as accurately as possible the exact specific indications for use of the same, and point out the conditions under which it may be successfully employed. Complete literature on our Biological Products sent to physicians on request.

ANTITOXINS

⊕ Diphtheria Antitoxin, Squibb

In a special aseptic Syringe, containing:

1000 Units. Immunizing Dose

(Code Word: *Abide*)

3000 " Curative Dose

(Code Word: *Accident*)

5000 " " "

(Code Word: *Address*)

10000 " " "

(Code Word: *Affluence*)

Serum Antidiphthericum Purificatum. Refined and concentrated; small in bulk, high in potency and low in total solids. **Curative Dose:** 5000 units in ordinary cases; 10,000 units in croup and where treatment is begun late; 20,000 to 40,000 units in severe cases—repeated if required in 12 hours. **Immunizing Dose:** 1000 to 2000 units; protection lasts 2 to 4 weeks.

⊕ Tetanus Antitoxin, Squibb

In a special aseptic Syringe, containing:

1500 Units. Immunizing Dose

(Code Word: *Admit*)

3000 " Curative Dose

(Code Word: *Advance*)

5000 " " "

(Code Word: *Affair*)

Clear, very concentrated product. **Curative Dose:** initial, 10,000 units, intravenously, with 5000 to 10,000 units intraspinally; later injections at 12 to 24-hour intervals as necessary. **Immunizing Dose:** 1000 to 2000 units, repeated in very suspicious cases once or twice at 8-day intervals. Swab wound freely with tincture iodine.

SERUMS

Anti-Gonococcic Serum, Squibb

In a special aseptic Syringe:

2×10 Cc.

(Code Word: *Afternoon*)

Carefully standardized by opsonic complement fixation tests, and by protection tests, and proved of very high potency. **Indications:** Acute gonococcic arthritis and endocarditis and general sepsis complicating gonococcic urethritis. **Dose:** 20 to 100 Cc., hypodermically, every 24 hours as needed.

This house supplies only one quality of each product; that best suited to the purposes intended. The specification "Squibb's" is not open to various interpretations; it has a plain, positive meaning. Therefore, when prescribing, specify SQUIBB'S.

Anti-Meningitic Serum, Squibb

In a special Gravity Container complete with needle, rubber tubing, etc.: (Code Word: *Agent*)

2×15 Cc.

Indications: Epidemic cerebrospinal meningitis due to meningococcus infection. **Dose:** subdurally, after withdrawal of cerebrospinal fluid: 1 to 5 years, 3 to 15 Cc.; 5 to 10 years, 5 to 15 Cc.; 10 to 15 years, 10 to 20 Cc.; 15 to 20 years, 15 to 30 Cc.; 20 years and over, 20 to 40 Cc.

Anti-Pneumococcic Serum, Squibb—Type I

50 Cc. Vials (Code Word: *Aggressive*).

Indications: Acute lobar pneumonia. **Dose:** *Subcutaneously*, 2 to 4 hours before intravenous injection, 0.5 Cc.; *intravenously*, 50 to 100 Cc., preferably mixed with equal quantity of sterile physiological salt solution, every 6 to 8 hours until crisis is past. Inject *slowly* and preferably by gravity. Warm serum to body temperature before use.

Anti-Streptococcic Serum, Squibb

In our special Syringe:

2×10 Cc.

(Code Word: *Air*)

20 Cc. Vials, without syringe, for local use,

(Code Word: *Alloy*)

Indications: *Subcutaneously* and *intravenously*, postpartum sepsis, scarlet fever, spreading erysipelas, etc.; *locally*, suppurating streptococcic wounds, puerperal sepsis, etc. **Dose:** 20 to 200 Cc., repeated daily if needed.

Anti-Streptococcic Serum, Rheumatic, Squibb

20 Cc. Vials, without syringe (Code Word: *Allure*),

50 Cc. Vials, without syringe (Code Word: *Alma*),

Indications: acute sepsis produced by streptococci and manifested by swelling of the joints, fever, angina and cardiac complications. **Dose:** *intravenously* (by preference), or *intramuscularly* or *subcutaneously*, 20 Cc. to 50 Cc. repeated in 24 hours or oftener, according to the severity of the disease and the response.

Normal Horse Serum, Squibb

In our special Syringe:

2×10 Cc.

(Code word: *Alter*)

20 Cc. Vials, without syringe, for local use.

(Code Word: *Amalgam*)

Indications: *Subcutaneously* and *intravenously*, hemophilia, melæna neonatorum, purpura hæmorrhagica, persistent epistaxis, typhoid hemorrhage, gastric and duodenal hemorrhage, and general hemorrhages in leukemia and other blood diseases; also in septic diseases for which no immune serums have been made, etc. *Locally*, puerperal sepsis as a uterine pack, in chronic suppurating wounds or sinuses. *Orally*, pain and hemorrhage in gastric ulcer. **Dose:** *Subcutaneously* 20 to 30 Cc., repeated daily and increased if necessary; *Orally*, 30 to 100 Cc. every 12 to 24 hours as needed.

BACTERIAL VACCINES

All the Vaccines listed below are also prepared by us, upon request, in special doses that may be required. Such extra doses are supplied without extra charge.

Acne Vaccine, Squibb

In fully assembled aseptic Syringes, containing:

25, 50, 100, 200 million killed bacilli
box of 4 Syringes (Code Word: *Amaze*)

50, 200 million killed bacilli, box of 2 Syringes
(Code Word: *Amber*)

In Ampuls:

10, 25, 50, 100, 200, 500 million killed bacilli, box
of 6 Ampuls with Syringe (Code Word: *Amiable*)

50, 200 million killed bacilli, box of 2 Ampuls with
Syringe (Code Word: *Amorous*)

Indications: Non-pustular acne vulgaris where comedones predominate. **Dose:** 5 to 10 million bacilli, gradually increasing to larger doses, injected every three to five days. Squeezing out comedones, hot applications, massage and suitable dietetic measures should not be neglected. (See Staphylo-Acne Vaccine.)

Bacillus Coli Communis Vaccine, Squibb

In fully assembled aseptic Syringes, containing:

100, 200, 500, 1000 million killed bacilli,
box of 4 Syringes (Code Word: *Analysis*)

100, 500 million killed bacilli, box of 2 Syringes
(Code Word: *Ancestor*)

In Ampuls:

2×100, 2×500, 2×1000 million killed bacilli,
box of 6 Ampuls with Syringe (Code Word: *Adducing*)

100, 500 million killed bacilli,
box of 2 Ampuls with Syringe (Code Word: *Afflict*)

Indications: Wounds and abdominal or pelvic abscesses due to B. Coli Communis, cystitis and pyelitis from same cause, etc. **Dose:** 100 million bacilli, rapidly increased to 500 or 1000 million bacilli, subcutaneously every three to five days.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Bacillus Pertussis Vaccine, Squibb

In fully assembled aseptic Syringes, containing:

25, 50, 100, 200 million killed bacilli
box of 4 Syringes (Code Word: *Anchor*)

50, 200 million killed bacilli, box of 2 Syringes
(Code Word: *Andante*)

In Ampuls:

25, 50, 100, 200, 300, 500 million killed bacilli,
box of 6 Ampuls with Syringe
(Code Word: *Andrew*)

50, 200 million killed bacilli,
box of 2 Ampuls with Syringe
(Code Word: *Anecdote*)

Indications: Prophylactic and curative of pertussis (whooping-cough). **Dose:** *Prophylactic*, 20, 50, and 100 million bacilli injected at five-day intervals; *curative*, 25, 50, 100, 200, 300 and 500 million bacilli, every day if needed, according to the response and reaction.

Gonococcus Vaccine, Squibb

In fully assembled aseptic Syringes, containing:

100, 200, 350, 500 million killed gonococci,
box of 4 Syringes (Code Word: *Annual*)

100, 500 million killed gonococci, box of 2 Syringes
(Code Word: *Angel*)

In Ampuls:

50, 100, 150, 350, 500, 1000 million killed gonococci, box of 6 Ampuls with Syringe
(Code Word: *Anglify*)

100, 500 million killed gonococci, box of 2 Ampuls with Syringe
(Code Word: *Anthem*)

Made from cultures of many different strains. **Indications:** Subacute and chronic gonococcus infection (urethritis, epididymitis, prostatitis, pyelitis, cystitis, arthritis, vulvovaginitis, salpingitis, iritis, endometritis, etc.). **Dose:** 100 million gonococci, increased if necessary to 500 or even 1000 million, every three to five days.

Meningococcus Vaccine Curative, Squibb

In fully assembled aseptic Syringes, containing:

100, 200, 400, 500 million killed meningococci,
box of 4 Syringes (Code Word: *Appeal*)

100, 500 million killed meningococci,
box of 2 Syringes (Code Word: *Apply*)

In Ampuls:

2×100 , 2×500 , 2×1000 million killed meningococci, box of 6 Ampuls with Syringe
(Code Word: *Approve*)

100, 500 million killed meningococci,
box of 2 Ampuls with Syringe
(Code Word: *Apron*)

Meningococcus Vaccine Curative, Squibb (Cont.)

Indications: Adjunct to anti-meningitic *serum* in persistent subacute or chronic epidemic meningitis. **Dose:** 100 million bacteria, increased until a decided response is had, every three to five days.

Meningococcus Vaccine Immunizing, Squibb

Assembled Syringes, containing:

100, 500, 1000 million killed meningococci,
box of 3 Syringes (Code Word: *Answer*)

In Ampuls:

100, 500, 1000 million killed meningococci,
box of 3 Ampuls with Syringe
(Code Word: *Arch*)

Indications: Prophylactic against epidemic meningitis; affords a high degree of immunity. **Dose:** 500, 1000 and 1000 million bacteria, hypodermically, at intervals of a week to ten days.

Pneumococcus Vaccine, Squibb

In fully assembled aseptic Syringes, containing:

100, 200, 400, 500 million killed pneumococci,
box of 4 Syringes (Code Word: *Arrest*)

100, 500 million killed pneumococci,
box of 2 Syringes (Code Word: *Arrive*)

In Ampuls:

2×100 , 2×500 , 2×1000 million killed pneumococci,
box of 6 Ampuls with Syringe
(Code Word: *Arsenal*)

100, 500 million killed pneumococci,
box of 2 Ampuls with Syringe
(Code Word: *Artful*)

Indications: Lobar pneumonia, unresolving pneumococcic pneumonia, empyema, pyorrhea alveolaris, chronic rhinitis, sinusitis, etc., caused by pneumococci. **Dose:** In *acute* pneumonia, 20 to 100 to 500 million bacteria, every three to five days; in *chronic* cases, larger doses are given (100 to 500 to 1000 million).

⊕ Smallpox (Variola) Vaccine, Squibb

Glycerinated. Each dose in separate aseptic sealed glass tube. With bulb and needles.

Box of 5,
(Code Word: *Brave*)
Box of 10,
(Code Word: *Brook*)

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily

Staphylo-Acne Vaccine, Squibb

In fully assembled aseptic Syringes, containing:
 100, 200, 400, 500 million killed staphylococci; and
 25, 50, 100, 200 million killed acne bacilli
 box of 4 Syringes (Code Word: *Attach*)
 100, 500 million killed staphylococci; and 50, 200
 million killed acne bacilli, box of 2 Syringes
 (Code Word: *Attendance*)

In Ampuls:

2×100, 2×500, 2×1000 million killed staphylo-
 cocci; and 2×20, 2×50, 2×100 million killed acne
 bacilli, box of 6 Ampuls with Syringe
 (Code Word: *Attractive*)
 100, 500 million killed staphylococci; and 50, 200
 million killed acne bacilli, box of 2 Ampuls with
 Syringe (Code Word: *Attribute*)

Indications: Acne, particularly pustular. As acne infection is almost always associated with the *Staphylococcus albus*, the joint use of staphylococci and acne bacilli usually gives prompter results than acne vaccine alone. **Dose:** 100 to 1000 million staphylococci with 25 to 200 million acne bacilli, every three to five days. (See also Acne Vaccine.)

⊕ Staphylococcus Vaccine, Squibb

In fully assembled aseptic Syringes, containing:
 100, 200, 500, 1000 million killed staphylococci,
 box of 4 Syringes (Code Word: *Author*)
 100, 500 million killed staphylococci,
 box of 2 Syringes (Code Word: *Automat*)

In Ampuls:

100, 250, 2×500, 1000, 2000 million killed staphy-
 lococci, box of 6 Ampuls with Syringe
 (Code Word: *Automobile*)
 100, 500 million killed staphylococci,
 box of 2 Ampuls with Syringe
 (Code Word: *Autopsy*)

Containing the *Staphylococcus albus*, *S. aureus*, and *S. citreus*.

Indications: Chronic furunculosis, carbuncle, chronic sinuses, sycosis, psoas abscess, persistent cutaneous abscess, impetigo, acne, chronic suppurating glands, otitis media, osteomyelitis—any persistent infection due to staphylococci. **Dose:** 100 million, quickly increased to 500, 1000 or even more million bacteria, according to the response, every three to five days.

Streptococcus Vaccine, Squibb

In fully assembled aseptic Syringes, containing:
 100, 200, 500, 1000 million killed streptococci,
 box of 4 Syringes (Code Word: *Avoid*)
 100, 500 million streptococci, box of 2 Syringes
 (Code Word: *Avowing*)

Streptococcus Vaccine, Squibb (Cont.)**In Ampuls:**

2×100, 2×500, 2×1000 million killed streptococci,
box of 6 Ampuls with Syringe

(Code Word: *Avulsion*)

100, 500 million killed streptococci,

box of 2 Ampuls with Syringe

(Code Word: *Away*)

Indications: Indolent subacute and chronic suppurations of the skin, mucosæ and joints, due to streptococci—abscesses, cellulitis, otitis media, chronic mastoid suppuration, oral suppuration, chronic puerperal sepsis, chronic streptococcic endocarditis, recurrent erysipelas, scarlet fever, articular rheumatism, etc.

Dose: *Curative*, 100 million streptococci, rapidly increased to 1000 million, subcutaneously, every three to five days; *prophylactic* of scarlatina, 250, 500 and 1000 million bacteria, at weekly intervals.

⊕ Typhoid Vaccine, Squibb

In fully assembled aseptic Syringes, containing:

100, 200, 500, 1000 million killed bacilli,
box of 4 Syringes

(Code Word: *Azure*)

100, 500 million killed bacilli, box of 2 Syringes

(Code Word: *Babble*)

500, 2×1000 million killed bacilli, box of 3 Syringes

(Code Word: *Awaiting*)

In Ampuls:

2×160, 2×500, 2×1000 million killed bacilli,
box of 6 Ampuls with Syringe (Code Word: *Bear*)

100, 500 million killed bacilli,

box of 2 Ampuls with Syringe

(Code Word: *Bedding*)

500, 2×1000 million killed typhoid bacilli,

box of 3 Ampuls with Syringe

(Code Word: *Blacken*)

Dose: *Curative*, 500 million bacilli as initial, repeated at four-day intervals as long as required, each dose increasing by 500 million over preceding dose unless too great local or general febrile reaction ensue; usually two to four injections are required. *Immunizing*, men of 150 to 200 lbs., 500 million, 1000 million and 1000 million bacilli, at intervals of seven to ten days; women and children less in proportion to their weight.

Note.—All the above Vaccines are also supplied, upon request, in vials containing 20 Cc., without syringes, at per vial. Write for Complete Literature.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

Autogenous Vaccine, Squibb

Prepared from samples of pus or cultures submitted.
Twelve doses if necessary, in aseptic Ampuls

Pasteur Anti-Rabic Vaccine, Squibb

21 treatments, each in an aseptic sealed Ampul, with
Syringe, ready for use, packed in Caloris container
(Code Word: *Abandon*)

The Pasteur Treatment for prevention of rabies is an established success. Almost complete protection may be expected if the full course of treatments be instituted promptly after the bite of the rabid animal. The Squibb Treatments are so prepared that they may be administered by the physician at his office or at the house of the patient.

The doses of Anti-Rabic Vaccine will be sent daily by special delivery mail and numbered in the order in which they are to be administered, commencing with dose No. 1 and continuing in regular sequence to the end of the treatment, usually 21 doses. The doses should be kept in a cool place until used. Doses Nos. 1 and 2 are given the first day, doses 3 and 4 the second day, and then one dose daily to the end of the treatment.

Leucocyte Extract, Squibb

10 Cc. in our special aseptic Syringe
(Code Word: *Boating*)

Prepared from healthy leucocytes of the horse, according to the method of Hiss. **Indications:** acute infectious diseases where accurate bacteriological diagnosis cannot be made—erysipelas, meningitis, pneumonia, septicemia, pyemia, acne, carbuncle, furunculosis, etc. Also used in conjunction with specific serums and vaccines where positive diagnosis cannot be made.

Solution Hypophysis (Solution Pituitary Body.) See Part I of this book.

Thromboplastin, Squibb.

20 Cc. vial,

Made according to the method devised by Dr. Alfred F. Hess of the Research Laboratory of the New York City Department of Health. A true physiological Hemostatic, acting by supplying normal properties to the blood stream, and not chemically. Of uniform activity; safe, efficient, non-irritating and easily applied. It represents the thromboplastic substances contained in ox brain, carefully tested physiologically and standardized, and kept aseptic by addition of 0.3 percent. trikresol. Has been used with uniform success in controlling hemorrhage after removal of adenoids and other nose and throat surgery; rectal bleeding, hemorrhage after removal of hemorrhoids, and after circumcision; in melæna neonatorum, dental bleeding, old ulcers, etc.; by mouth in gastric or intestinal hemorrhage. Considered indicated in all types of hemorrhage from small veins and capillaries. Applied direct to the

Thromboplastin, Squibb (Cont.)

bleeding surface by means of cotton, gauze or tampon, kept in place a few minutes. **Dose:** by mouth in gastric or intestinal hemorrhage, 20 mils (Cc.), with a glassful of water, several times daily, if necessary. Keep in ice box. **NOTE:** For *subcutaneous* and *intramuscular* infection, to increase the coagulability of the blood, Thromboplastin *Hypodermic* should be used, in doses of 10 to 20 Cc. every 24 to 72 hours, according to indications.

Urease. See Part I of this work.

THERAPEUTIC INDEX
Squibb's Biological Products

Abscesses: Bacillus Coli Communis Vaccine, Staphylococcus Vaccine, Streptococcus Vaccine.

Acne: Acne Vaccine, Staphylo-Acne Vaccine, Staphylococcus Vaccine, Leucocyte Extract.

Adenitis: Staphylococcus Vaccine, Streptococcus Vaccine.

Anthrax: Staphylococcus Vaccine, Leucocyte Extract.

Arthritis: Anti-Gonococcic Serum, Anti-Streptococcic Serum Rheumaticus, Gonococcus Vaccine, Streptococcus Vaccine.

Bleeding: Normal Horse Serum, Thromboplastin.

Boils: Staphylococcus Vaccine, Leucocyte Extract.

Carbuncle: Staphylococcus Vaccine, Leucocyte Extract.

Cellulitis: Streptococcus Vaccine.

Cerebro-spinal Meningitis: Anti-Meningitic Serum, Meningococcus Vaccine.

Conjunctivitis, Gonorrheal: Anti-Gonococcic Serum, Meningococcus Vaccine.

Cystitis: Bacillus Coli Communis Vaccine, Gonococcus Vaccine.

Dental Bleeding: Thromboplastin.

Diphtheria: Diphtheria Antitoxin.

Duodenal Hemorrhage: Normal Horse Serum, Thromboplastin.

Eczema: Staphylococcus Vaccine.

Empyema: Pneumococcus Vaccine, Leucocyte Extract.

Endocarditis: Anti-Gonococcic Serum, Gonococcus Vaccine, Streptococcus Vaccine.

Since we make only one quality of each product, that best suited to the purposes intended, the specification "Squibb's" is not open to various interpretations, but has a plain, positive meaning. When ordering or prescribing, specify SQUIBB'S.

Endometritis Gonorrheal: Gonococcus Vaccine.

Epididymitis: Anti-Gonococcic Serum, Gonococcus Vaccine.

Epistaxis, Persistent: Normal Horse Serum, Thromboplastin.

Erysipelas: Anti-Streptococcic Serum, Streptococcus Vaccine, Leucocyte Extract.

Felon: Streptococcus Vaccine.

Fistulous Sinuses: Anti-Streptococcus Serum, Normal Horse Serum, Pneumococcus Vaccine, Staphylococcus Vaccine, Streptococcus Vaccine.

Furunculosis: Staphylococcus Vaccine, Leucocyte Extract.

Gastric Hemorrhage: Normal Horse Serum, Thromboplastin.

Gonorrhea: Anti-Gonococcic Serum, Gonococcus Vaccine.

Gonorrheal Rheumatism: Anti-Gonococcic Serum, Gonococcus Vaccine.

Hematemesis; Hemophilia; and Hemorrhage: Normal Horse Serum, Thromboplastin.

Hydrophobia: Pasteur Anti-Rabic Vaccine.

Impetigo: Staphylococcus Vaccine.

Infected Wounds: Anti-Streptococcic Serum, Bacillus Coli Communis Vaccine, Staphylococcus Vaccine, Leucocyte Extract.

Iritis, Gonorrheal: Gonococcus Vaccine.

Ischio-rectal Abscess: Bacillus Coli Communis Vaccine, Staphylococcus Vaccine, Streptococcus Vaccine.

Leukemia: Normal Horse Serum, Thromboplastin.

Lymphadenitis: Staphylococcus Vaccine, Streptococcus Vaccine.

Mastoiditis: Staphylococcus Vaccine, Streptococcus Vaccine.

Melæna Neonatorum: Normal Horse Serum, Thromboplastin.

Meningitis, Epidemic: Anti-Meningitic Serum, Meningococcus Vaccine, Leucocyte Extract.

Meningitis, Subacute or Chronic: Meningococcus Vaccine, Leucocyte Extract.

Metrorrhagia: Normal Horse Serum, Thromboplastin.

Middle Ear Disease: Staphylococcus Vaccine, Streptococcus Vaccine.

Orchitis: Anti-Gonococcic Serum, Gonococcus Vaccine.

Osteomyelitis: Staphylococcus Vaccine.

Otitis Media: Staphylococcus Vaccine, Streptococcus Vaccine.

- Peritonitis:** Bacillus Coli Communis Vaccine.
- Pertussis:** Bacillus Pertussis Vaccine.
- Phlegmon:** Streptococcus Vaccine.
- Pneumonia:** Pneumococcus Vaccine, Leucocyte Extract.
- Post-operative Bleeding:** Normal Horse Serum, Thromboplastin.
- Prostatitis:** Gonococcus Vaccine.
- Psoas Abscess:** Bacillus Coli Communis Vaccine, Staphylococcus Vaccine, Streptococcus Vaccine.
- Puerperal Sepsis:** Anti-Streptococcic Serum, Normal Horse Serum, Streptococcus Vaccine.
- Purpura Hæmorrhagica:** Normal Horse Serum, Thromboplastin.
- Pustular Acne:** Staphylo-Acne Vaccine.
- Pustular Rosacea:** Staphylo-Acne Vaccine.
- Pyelitis:** Bacillus Coli Communis Vaccine, Gonococcus Vaccine.
- Pyelo-nephritis:** Bacillus Coli Communis Vaccine, Gonococcus Vaccine.
- Pyemia:** Leucocyte Extract.
- Pyorrhœa Alveolaris:** Pneumococcus Vaccine.
- Rabies:** Pasteur Anti-Rabic Vaccine.
- Rectal Abscess:** Bacillus Coli Communis Vaccine, Staphylococcus Vaccine, Streptococcus Vaccine.
- Rheumatism:** Streptococcus Vaccine, Anti-Streptococcic Serum Rheumatic.
- Rhinitis, Chronic:** Pneumococcic Vaccine.
- Salpingitis:** Bacillus Coli Communis Vaccine, Gonococcus Vaccine.
- Sapremia:** Leucocyte Extract.
- Scarlet Fever:** Anti-Streptococcic Serum, Streptococcus Vaccine.
- Sepsis, Gonococcic:** Anti-Gonococcic Serum, Gonococcus Vaccine.
- Sepsis, Post-partum:** Anti-Streptococcic Serum, Leucocyte Extract.
- Septicemia:** Anti-Streptococcic Serum, Normal Horse Serum, Leucocyte Extract.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Sinuses, Suppurating: Anti-Streptococcic Serum, Normal Horse Serum, Pneumococcic Vaccine, Staphylococcus Vaccine, Streptococcus Vaccine.

Smallpox (Variola): Smallpox Vaccine.

Sore Throat, Septic: Streptococcus Vaccine.

Suppurating Wounds or Sinuses: Anti-Streptococcic Serum, Normal Horse Serum, Streptococcus Vaccine.

Sycosis: Staphylococcus Vaccine.

Tetanus: Tetanus Antitoxin.

Tonsillitis: Staphylococcus Vaccine.

Typhoid Fever: Typhoid Vaccine.

Ulcers, Old. Thromboplastin.

Urethritis: Anti-Gonococcic Serum, Gonococcus Vaccine.

Vaginitis, Gonorrheal: Gonococcus Vaccine.

Variola: Smallpox Vaccine.

Vesiculitis: Gonococcus Vaccine.

Vulvo-vaginitis, Gonorrheal: Gonococcus Vaccine.

Whooping Cough: Bacillus Pertussis Vaccine.

Wounds, Infected: Anti-Streptococcic Serum, Bacillus Coli Communis Vaccine, Staphylococcus Vaccine, Leucocyte Extract.

PART IV

Squibb's Analyzed Reagents, Reagent Chemicals, Test Solutions, Volumetric Solutions, and Indicators

FOR many years the Squibb standard of quality has stood for the best that can be produced in the line of drugs and chemicals. To these lines we have added a list of Reagents, prepared from our regular stock of high-grade chemicals by repeated purification. Each lot of chemical is first sampled in order to determine its suitability for reagent purposes. If accepted, all possible impurities present are carefully determined by check analyses. Since the impurities of reagent chemicals are present in very small amounts, we employ quantities sufficiently large to insure accurate quantitative results. The usual procedure consists in applying tests on a quantity of from 10 to 20 Gm. of the reagent chemical, and if no appreciable reaction is obtained "none" present is reported. If, however, there is the slightest indication of a reaction, then a suitably large quantity of the material is taken in order to obtain a satisfactory weighable result. With such reagents as are employed in relatively small quantities, we usually take 10 Gm. of the sample; while with others, such as sodium carbonate or ammonium oxalate, which are used in larger amounts in analyses, we take from 25 to 100 Gm. for each determination. The average percentage of impurity found is expressed on the label in the nearest higher round number. For foreign metals, such as react with hydrogen sulphide or ammonium sulphide, samples ranging from 5 to 10 Gm. are tested, and if an appreciable reaction is noted a sufficiently large quantity is taken and the impurities determined and stated on the label.

At the foot of this page we show an illustration of our Reagent labels; and after that we present a list of the Reagents now available, together with the Test Solutions, Volumetric Solutions, Indicators, and Test Papers offered under the Squibb label. We shall be glad to prepare any additional ones for which there may be a demand.

Prices are omitted. Owing to the disturbed condition of the chemical market, prices are changing constantly. We shall be glad to receive your want lists, showing the quantities and subdivisions desired, and to submit our quotations.

NOTE.—In addition to the list of Reagent Chemicals, we offer a full line of chemicals of a degree of purity usually exceeding the standards of the U. S. Pharmacopœia and adapted for all lines of chemical work where the highest purity Reagent is not required. Write for quotations.

SQUIBB'S REAGENT Ammonium Carbonate

Approx. $\text{NH}_4\text{HCO}_3\text{NH}_4\text{NH}_2\text{CO}_2$

CONTAINS:	PERCENT.:
Non-volatile Matter. (20 Gm.)	none
Chloride (20 Gm.)	none
Sulphate (20 Gm.)	none
Thiocyanate (20 Gm.)	none
Calcium. (20 Gm.)	none
Iron (1 Gm., colorimetric)	none
Tar Bases. (5 Gm.)	none

The figures in parentheses express the quantities taken for each determination. LOT 14741

E·R·SQUIBB & SONS, NEW YORK
MANUFACTURING CHEMISTS TO THE MEDICAL PROFESSION SINCE 1858

SQUIBB'S ANALYZED REAGENTS

Acid Acetic Glacial, Squibb's Reagent

g. s. bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Non-volatile substances—HCl—SO₃—SO₂—HCOOH—
 Ca—Fe—Empyreumatics—Heavy Metals.

Acid Acetic Anhydride, Squibb's Reagent

g. s. bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Non-volatile substances—HCl—Heavy Metals.

Acid Arsenous. See Arsenic Trioxide.

Acid Boric (Crystals), Squibb's Reagent

g. s. bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Cl—SO₃—Ca—Alkalies—SiO₂—Fe—Pb.

Acid Chromic. See Chromium Trioxide.

Acid Citric, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Non-volatile substances—SO₃—Ca—Fe—Pb.

Acid Gallic, Squibb's Reagent

bottle: $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Non-volatile substances—Cl—SO₃—Fe—Ca—Mg—
 Tannin.

Acid Hydrobromic (34%), Squibb's Reagent

g. s. bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Non-volatile substances—HCl—SO₃—Ca—Fe—
 Heavy Metals—HPH₂O₂.

Acid Hydrochloric Conc. (36%), Squibb's Reagent

g. s. bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Non-volatile substances—Chlorine—SO₃—SO₂—As—
 Fe—Heavy Metals.

Acid Hydrochloric (25%), Squibb's Reagent

Same as above.

Acid Hydrofluoric (42%), Squibb's Reagent

ceresin bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Non-volatile substances—HCl—SO₃—SO₂—H₂SiF₆—
 Ca—Mg—Al—Fe.

Acid Molybdic (85%), Squibb's Reagent

bottle: $\frac{1}{4}$ lb.....1 oz.....
 Tested for: MoO₃—Cl—SO₃—P₂O₅—NO₃—As—Fe—NH₃—Insol.
 in NH₃.

Acid Nitric Conc. (69%), Squibb's Reagent

g. s. bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....
 Tested for: Non-volatile substances—HCl—SO₃—As—HIO₃—Fe—
 Heavy Metals.

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

Acid Nitric (25%), Squibb's Reagent

Same as above.

Acid Oxalic, Squibb's Reagentbottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—Cl—SO₃—NO₃—NH₃—Ca—Fe—Pb.**Acid Phosphoric (88%), Squibb's Reagent**g. s. bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Halogen Acids—SO₃—NO₃—As—Ca—Mg—Fe—
"Ous" Acids—Heavy Metals.**Acid Phospho-Tungstic, Squibb's Reagent**

1-oz. bottle:

Tested for: P—NH₃—WO₃.**Acid Sulphuric (98%), Squibb's Reagent**g. s. bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....Tested for: Non-volatile substances—HCl—NO₃—NH₃—As—Fe—Pb—Heavy Metals.**Acid Sulphurous, Squibb's Reagent**g. s. bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: Non-volatile substances—As—Fe—Heavy Metals—Assay.

Acid Tannic, Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: Non-volatile substances—Metals—Moisture.

Acid Tartaric (Pb Free), Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—Cl—SO₃—Ca—Fe—Pb.**Alcohol, Anhydrous (99.97% by vol.), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....

Tested for: Gravity—Residue—Fusel Oil—Aldehyde—Furfural—Oxidizable impurities.

Alcohol, Methyl (99.5% by wt.), Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....

Tested for: Residue—Acetone—Emphyreumatics—Oxidizable impurities.

Aluminum-Ammonium Sulphate, Squibb's Reagentbottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: Cl—Ca—Mg—As—Fe—Heavy Metals.

Aluminum Nitrate, Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl—SO₃—Ca—Mg—Fe—Heavy Metals.**Aluminum-Potassium Sulphate, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: Cl—Ca—Mg—As—Fe—Heavy Metals.

Ammonia Water Conc. (28%), Squibb's Reagentg. s. bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....Tested for Non-volatile substances—Cl—SO₃—Tar Bases—Fe—Heavy Metals.

Ammonium Carbonate (Cubes), Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—Cl—SO₃—CNS—Ca—Fe—Tar
Bases—Heavy Metals.**Ammonium Chloride, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—SO₃—CNS—Ca—Fe—Tar
Bases—Heavy Metals.**Ammonium Chromate, Squibb's Reagent**bottle: $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl—SO₃—Ca—Mg—Al—Fe—Alkalies.**Ammonium Molybdate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: MoO₃—Cl—SO₃—NO₃—P₂O₅—Foreign Metals.**Ammonium Nitrate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—Cl—SO₃—Ca—Fe—As—
Heavy Metals.**Ammonium Oxalate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—Cl—SO₃—Ca—Fe—Heavy
Metals.**Ammonium Persulphate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—Cl—Ca—Mg—Al₂O₃—Fe—
SiO₂—Heavy Metals—Free Acid—Assay.**Ammonium Phosphate (Dibasic), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl—SO₃—NO₃—CO₂—Ca—As—Fe—Salts of Alkalies.**Ammonium Sulphate, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—Cl—CNS—Ca—Fe—Heavy
Metals.**Ammonium Sulphocyanate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances—Cl—SO₃—Fe—Heavy
Metals—Insoluble in Alcohol.**Antimony-Potassium Tartrate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl—SO₃—Ca—Fe—Pb.**Arsenic Trioxide, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: Non-volatile substances—Cl—S—Ca—Mg—Fe.

Asbestos Wool Purified, Squibb's Reagent

Selected, long-fibre, for Gooch Crucible Work.

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Barium Acetate, Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Foreign matter not ppt. by $\text{H}_2\text{SO}_4\text{-Cl-NO}_3\text{-SO}_3\text{-Sr-Ca-Fe-Heavy Metals}$.**Barium Carbonate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Alkalies- $\text{Cl-SO}_3\text{-Ca-Sr-Fe-Heavy Metals}$.**Barium Chloride, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Foreign matter not ppt. by $\text{H}_2\text{SO}_4\text{-ClO}_3\text{-NO}_3\text{-Ca-Sr-Fe-Heavy Metals}$.**Barium Hydroxide, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....Tested for: Alkalies- $\text{Cl-S-CO}_2\text{-Ca-Sr-Fe-Heavy Metals}$.**Barium Nitrate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Foreign matter not ppt. by $\text{H}_2\text{SO}_4\text{-Cl-Sr-Ca-Fe-Heavy Metals}$.**Benzol (Benzene), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....Tested for: Gravity-Boiling-point-Non-volatile substances-Thiophen- CS_2 .**Bismuth Nitrate (Crystals), Squibb's Reagent**g. s. bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-As-Fe-Pb-Cu-Ag}$.**Bismuth Subnitrate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-CO}_2\text{-Ca-Mg-Alkalies-As-Fe-Pb-Cu}$.**Cadmium Iodide, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{SO}_3\text{-Zn-Fe}$.**Cadmium-Potassium Iodide, Squibb's Reagent**

1-oz. bottle:

Tested for: $\text{SO}_3\text{-NO}_3\text{-IO}_3\text{-Fe}$.**Cadmium Sulphate, Squibb's Reagent**

1-oz. bottle:

Tested for: Cl-Zn-Fe .**Calcium Carbonate (Precipitated), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....Tested for: $\text{SO}_3\text{-Mg-Sr-Ba-Al-Fe-Heavy Metals}$, soluble salts.**Calcium Chloride (Crystals), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{SO}_3\text{-Mg-Sr-Ba-Al-Fe-Heavy Metals}$.**Calcium Oxide (From Reagent CaCO_3), Squibb's Reagent**

Assay.**Potassium Bitartrate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl-SO₃-Ca-NH₃-Al-Fe-Pb.**Potassium Bromate, Squibb's Reagent**

1-oz. bottle:

Tested for: Cl-Bromide-SO₃-Heavy Metals.**Potassium Carbonate (Anhydrous), Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl-SO₃-NO₃-Ca-Mg-Al-SiO₂-Fe-Heavy Metals**Potassium Chlorate, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl-SO₃-NO₃-Ca-Mg-As-Fe-Heavy Metals.**Potassium Chloride, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: SO₃-NO₃-Ca-Mg-I-Fe-Heavy Metals.**Potassium Chromate, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl-SO₃-Ca-Mg-Al-Fe.**Potassium Dichromate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl-SO₃-Al-Alkaline Earths-Heavy Metals.**Potassium Ferricyanide, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl-SO₃-CO₂.**Potassium Ferrocyanide, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl-SO₃-CO₂.**Potassium Hydroxide (by Alcohol), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Cl-SO₃-NO₃-CO₂-SiO₂-Ca-Al-Fe-N-Heavy
Metals.

The prices of the Squibb Products are in all instances as low as the quality and quantity of ingredients and the expense of manufacture allow. They include containers, packing and boxing. When ordering or prescribing medicinal products, specify SQUIBB'S.

Potassium Iodide, Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-CN-SO}_3\text{-NO}_3\text{-CO}_2\text{-KOH-IO}_3\text{-Fe-Heavy Metals}$.**Potassium Nitrate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-NO}_2\text{-ClO}_3\text{-Ca-Fe-Heavy Metals}$.**Potassium Permanganate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-NO}_3\text{-ClO}_3\text{-Ca-Fe}$.**Potassium Persulphate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SiO}_2\text{-Fe-Pb-Mn-NH}_3$.**Potassium-Sodium Tartrate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Halogens-SO}_3\text{-NH}_3\text{-Ca-Fe-Pb}$.**Potassium Sulphate, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-NO}_3\text{-As-NH}_3\text{-Ca-Mg-Fe-Heavy Metals}$.**Potassium Sulphocyanate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-NH}_3\text{-Fe}$.**Silver Nitrate (Crystals), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-Cu-Bi-Pb-Fe-SiO}_2\text{-Ca-Alkalies}$.**Sodium Acetate (Crystals), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-Ca-Fe-Heavy Metals}$.**Sodium Acetate Anhydrous, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-Ca-Fe-Heavy Metals}$.**Sodium-Ammonium Phosphate, Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-NO}_3\text{-CO}_2\text{-As-Ca-Fe-Heavy Metals}$.**Sodium Bicarbonate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-Mono-carbonate-NH}_3\text{-Ca-Na}_2\text{S}_2\text{O}_3\text{-CNS-P}_2\text{O}_5\text{-Al-SiO}_2\text{-Fe-Heavy Metals}$.**Sodium Bisulphate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-As-SiO}_2\text{-Ca-Mg-Al-Fe-Heavy Metals-Assay}$.**Sodium Bisulphite, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-Ca-Mg-As-Fe-Pb-Insoluble matter-Heavy Metals-Assay}$.**Sodium Bitartrate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-Ca-Fe-Pb}$.

Sodium Borate, Squibb's Reagent

bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-CO}_2\text{-Ca-Fe-Heavy Metals}$.

Sodium Carbonate (Crystals), Squibb's Reagent

bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-NO}_3\text{-P}_2\text{O}_5\text{-NH}_3\text{-Ca-Mg-Al-SiO}_2\text{-Fe-NaOH-Heavy Metals-Loss at } 120^\circ \text{ C.}$

Sodium Carbonate Anhydrous, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-P}_2\text{O}_5\text{-SiO}_2\text{-Ca-NH}_3\text{-Mg-Al-Fe-H}_2\text{O-Heavy Metals}$.

Sodium Chlorate, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-NO}_3\text{-Ca-Mg-Fe-As-Heavy Metals}$.

Sodium Chloride, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{SO}_3\text{-NH}_3\text{-Ca-Ba-Mg-I-Fe-Heavy Metals}$.

Sodium Citrate, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-As-Ca-Fe-Metals}$.

Sodium Cyanide, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-CO}_2\text{-Fe-CNS-Ferrocyanide-HCN}$.

Sodium Hydroxide (by Alcohol), Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-CO}_2\text{-Ca-Al-SiO}_2\text{-Fe-N-Assay}$.

Sodium Nitrate, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-Ca-Mg-Fe-NO}_2\text{-IO}_3\text{-ClO}_3\text{-Heavy Metals}$.

Sodium Nitrite, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-Fe-Assay}$.

Sodium Nitroprusside, Squibb's Reagent

1-oz. bottle:

Tested for SO_3 .

Sodium Oxalate (Soerensen's Salt), Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....

Tested for: $\text{Cl-SO}_3\text{-K-Fe-Organic Foreign compounds-Hygroscopic Moisture-Neutrality (Bureau of Standards)}$.

Sodium Peroxide, Squibb's Reagent

bottle: 1 lb..... $\frac{1}{4}$ lb.....

Tested for: $\text{Cl-SO}_3\text{-P}_2\text{O}_5\text{-SiO}_2\text{-Al-Fe-Heavy Metals-Assay}$.

If difficulty is experienced in procuring any Squibb product, in the original packages here listed, please notify us; we shall see that your wants are met promptly and satisfactorily.

Sodium Phosphate (Dibasic), Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-SO}_3\text{-NO}_3\text{-CO}_2\text{-As-Fe-Heavy Metals}$.**Sodium-Potassium Tartrate, Squibb's Reagent**

See Potassium-Sodium Tartrate.

Sodium Sulphate (Crystals), Squibb's Reagentbottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-Ca-Mg-Fe-As-Heavy Metals}$.**Sodium Sulphate Anhydrous, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-Ca-Mg-Fe-As-Heavy Metals-H}_2\text{O}$.**Sodium Thiosulphate, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{SO}_3\text{-SO}_2\text{-S-CO}_2\text{-Ca-Free Alkali-Fe-Heavy Metals-Assay}$.**Stannous Chloride, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{SO}_3\text{-NH}_3\text{-As-Fe-Pb-Alkalies-Foreign Metals}$.**Sulphur Washed, Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Non-volatile substances-Alkaline Earths- $\text{SiO}_2\text{-Fe-Free Acid}$.**Tin (Mossy), Squibb's Reagent**bottle: 1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: Fe-Pb-Cu-Zn-As .**Uranium Nitrate, Squibb's Reagent**

1-oz. bottle:

Tested for: $\text{SO}_3\text{-Fe-Alkalies-Alkaline Earths-Uranous Salt}$.**Zinc (Mossy), Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....Tested for: As-Fe-Pb-P-S .**Zinc Sulphate (Granular), Squibb's Reagent**bottle: 5 lbs.....1 lb..... $\frac{1}{4}$ lb.....1 oz.....Tested for: $\text{Cl-NO}_3\text{-NH}_3\text{-As-Fe-Foreign Metals}$.

SQUIBB'S REAGENT CHEMICALS

The following chemicals are of a degree of purity usually exceeding the standards of the U. S. Pharmacopœia and adapted for all lines of chemical work where the highest purity Reagent is not required.

Acetone

Acid Lactic

Acid Oleic

Acid Pyrogallic

Acid Salicylic

Acid Stearic

Acid Trichloracetic

Aloin

Aluminum Sulphate

Ammonia Water (10%)

Ammonium Benzoate

Ammonium Citrate

Ammonium Iodide

Amyl Acetate

Amyl Nitrite

Barium Dioxide

Reagent Chemicals (Continued)

Barium Sulphate	Potassium Binoxalate
Benzaldehyde	Potassium Bromide
Betanaphthol	Potassium Oxalate
Bismuth Citrate	Magnesium-Ammonium Phosphate
Bismuth Oxide Hydrated	Potassium Phosphate Dibasic
Bismuth Subcarbonate	Resorcin
Calcium Acetate	Sodium Arsenate
Calcium Phosphate	Sodium Bromide
Chloral Hydrate	Sodium Carbonate Mono-hydrated
Chloroform	Sodium Hypophosphite
Ether	Sodium Iodide
Ethyl Acetate	Sodium Phosphate Acid
Ferrous Sulphate Dried	Sodium Salicylate
Gold and Sodium Chloride	Sodium Tartrate
Gold Chloride	Strontium Acetate
Hydrogen Peroxide Solution	Strontium Bromide
Iron Reduced	Strontium Iodide
Kaolin	Sugar of Milk
Lead Subacetate Solution	Zinc Acetate
Magnesium Sulphate Exsiccated	Zinc Carbonate
Mercuric Chloride	Zinc Chloride
Mercuric Iodide	Zinc Iodide
Mercuric Oxide Yellow	Zinc Oxide
Methylene Blue	Zinc Sulphate Dried
Phenol	
Phenolphthalein	

SQUIBB'S TEST SOLUTIONS

Below we list the Test Solutions, Volumetric Solutions, and Indicators, as demanded for the reactions, tests and assays prescribed by the U. S. Pharmacopœia Ninth Decennial Revision. We use the familiar abbreviations "T. S." and V. S." for "Test Solution" and "Volumetric Solution," respectively; N/2, N/10, N/50 and N/100, for "Half-Normal," "Tenth Normal," "Fiftieth-Normal" and "Hundredth-Normal," respectively. In glass-stopper bottles.

Ammonium Carbonate T. S.	500 Cc.	100 Cc.
Ammonium Chloride T. S.	500 Cc.	100 Cc.
Ammonium Molybdate T. S.	500 Cc.	100 Cc.
Ammonium Oxalate T. S.	550 Cc.	100 Cc.
Ammonium Sulphide T. S.	500 Cc.	100 Cc.
Aniline Sulphate T. S.	500 Cc.	100 Cc.

The Squibb products are recognized everywhere as the Quality Standard. They are of uniform purity and strength, hence therapeutically dependable. When ordering or prescribing medicinal products, you will do well always to specify SQUIBB'S.

PART V

Veterinary Products

VETERINARY HYPODERMIC TABLETS

IN response to a demand, we have added the following Veterinary Hypodermic Tablets to our list, and we shall increase the number from time to time as the occasion demands.

These tablets contain the Squibb products of recognized quality. They are made with every possible care and attention to detail, and may be depended upon for prompt, certain and full therapeutic action.

Squibb's Veterinary Hypodermic Tablets are put up in tubes of 10 tablets and in bottles of 100 tablets. *Special formulas* in lots of 1000 or more will be made to order at short notice.

In making hypodermic injections, care should be taken to sterilize the syringe, needle and site of operation, so as to avoid infection; and all air-bubbles should be forced out of the syringe before injecting. Only freshly boiled distilled water should be used as solvent.

Tablets Aconitine Crystals 1/40 gr., Squibb
tube of 10, ; bottle of 100,

Tablets Aconitine Crystals 1/30 gr., Squibb
tube of 10, ; bottle of 100,

Tablets Aconitine Crystals 1/20 gr., Squibb
tube of 10, ; bottle of 100,

Aconitine is used as an Antineuralgic, Cardiac Sedative and Sudorific. Antidotes: emetics; atropine, digitalin or ammonia.

†**Tablets Apomorphine Hydrochloride 1/10 gr., Squibb**
tube of 10, ; bottle of 100,

Used as Emetic in dogs and cats.

The founder of the House of Squibb, Dr. Edward R. Squibb, not only had high ideals, but lived and labored for them; and, in the words of William Miller Bartlett, "the House of Squibb stands today as a living monument to the honor, integrity, zeal and devotion of its founder."

Tablets Eserine Salicylate 1/2 gr., Squibb
tube of 10, ; bottle of 100,

Tablets Eserine Salicylate 1 gr., Squibb
tube of 10, ; bottle of 100,

Eserine Salicylate has been found a serviceable Intestinal Peristaltic and Evacuant, and is largely used in colic of horses. The following is a favorite combination:

Tablets Eserine and Pilocarpine, Squibb
tube of 10, ; bottle of 100,

Eserine Salicylate 1/4 gr. } Commonly called "Colic
Pilocarpine Hydrochlor. 1 1/2 gr. } Tablets," because of
their specific use in colic
of horses. The pilocarpine enhances the peristaltic action of the eserine. **Dose:** 1 tablet, every four hours if needed.

(NOTE:—We also make hypodermic tablets Eserine Salicylate 1/100 gr., 1/60 gr. and 1/50 gr. See Part II of this book.)

†**Tablets Morphine Sulphate 1 gr., Squibb**
tube of 10, ; bottle of 100,

†**Tablets Morphine Sulphate 1 1/2 gr., Squibb**
tube of 10, ; bottle of 100,

†**Tablets Morphine Sulphate 2 gr., Squibb**
tube of 10, ; bottle of 100,

Antidotes to Morphine: apomorphine hypodermically as emetic; atropine, strychnine or caffeine; exercise.

(NOTE:—We also make hypodermic tablets Morphine Sulphate, 1/2 gr., 1/4 gr., 1/6 gr., 1/8 gr., 1/10 gr. and 1/16 gr. See Part II.)

†**Tablets Morphine and Atropine Comp. No. 1, Squibb**
Morphine Sulphate 1 1/2 gr. } tube of 10,
Atropine Sulphate 1/4 gr. } bottle of 100,

†**Tablets Morphine and Atropine Comp. No. 2, Squibb**
Morphine Sulphate 1 1/2 gr. } tube of 10,
Atropine Sulphate 1/2 gr. } bottle of 100,

(NOTE:—We also make hypodermic tablets Morphine Sulphate 1/2 gr. and Atropine Sulphate 1/120 gr.; Morphine Sulphate 1/4 gr. and Atropine Sulphate 1/150 gr.; Morphine Sulphate 1/8 gr. and Atropine Sulphate 1/200 gr.; Morphine Sulphate 1/8 gr. and Atropine Sulphate 1/150 gr.; and Morphine Sulphate 1/6 gr. and Atropine Sulphate 1/150 gr. See Part II of this book.)

The Squibb Ideals have taken concrete form in the Squibb Products; these are universally recognized as standards of uniform Purity and Efficacy, that is, general Excellence and Reliability. Specify SQUIBB'S when prescribing or ordering.

Tablets Nitroglycerin 1/10 gr., Squibb

tube of 10, ; bottle of 100,

Antispasmodic and Vasodilator. **Antidotes:** atropine, extract ergot or strychnine hypodermically; cold to head.**Tablets Physostigmine Salicylate. See Tablets Eserine Salicylate****Tablets Pilocarpine Hydrochloride 1/2 gr., Squibb**

tube of 10, ; bottle of 100,

Cathartic. **Antidotes:** apomorphine as emetic; atropine; ammonia.**Tablets Strychnine Sulphate 1/4 gr., Squibb**

tube of 10, ; bottle of 100,

Antidotes: apomorphine as emetic; chloral with bromides per rectum; chloroform by inhalation if required.**Tablets Strychnine Sulphate 1/2 gr., Squibb**

tube of 10, ; bottle of 100,

Tablets Strychnine Sulphate 1 gr., Squibb

tube of 10, ; bottle of 100,

(NOTE:—We also make hypodermic tablets Strychnine Sulphate $\frac{1}{400}$ gr., $\frac{1}{300}$ gr., $\frac{1}{200}$ gr., $\frac{1}{100}$ gr., $\frac{1}{60}$ gr., $\frac{1}{50}$ gr., $\frac{1}{40}$ gr., $\frac{1}{30}$ gr., $\frac{1}{25}$ gr., and $\frac{1}{20}$ gr. See Part II of this book.)**Tablets Veratrine Hydrochloride, 1/2 gr., Squibb**

tube of 10, ; bottle of 100,

Cardiac Sedative and Antipyretic, in horses and cattle. Should be injected well diluted, and its effect carefully watched. **Antidotes:** apomorphine as emetic; morphine with atropine; stimulants.

SOLUTION TABLETSWe append a list of a number of tablets used by Veterinarians for preparing *solutions*:**†Tablets Cocaine Hydrochloride 1 1/8 gr., Squibb**

tube of 25, ; bottle of 100,

1 tablet dissolved in 1 fluidrachm of water yields approximately a 2-percent. solution; 1 tablet in 2 fluidrachms of water a 1-percent. solution; 2 tablets in 1 fluidrachm of water a 4-percent. solution, etc. Distilled or sterile water should always be used in preparing solutions; and if for hypodermic use, the solution should be passed through absorbent cotton.

†Tablets Cocaine Hydrochloride 2 1/4 gr., Squibb

tube of 25, ; bottle of 100,

1 tablet dissolved in 1 fluidrachm of water yields approximately a 4-percent. solution.

Tablets Mercury Bichloride Compound Bernays', Small

Per lb. Per 1000 Per 500 Per 100

Blue or White

Mercury Bichloride	13/4 gr. }	The addition of citric acid to mercury bichloride prevents precipitation of the mercury as an albuminate, when used as an antiseptic on open wounds or mucous surfaces. The tablets offered here are extremely soluble and very convenient for preparing antiseptic solutions. Dissolved in water in the proportion of 1 tablet to 4 fluidounces, they yield a perfectly clear, light-blue solution containing about one part of corrosive sublimate in one thousand. These tablets are poisonous and should be kept in a safe place. The <i>blue</i> tablets will be supplied on unspecified orders. Antidotes: as in Part I under Mercury Chloride Corrosive.
Citric Acid	87/100 gr. }	

Tablets Mercury Bichloride Compound Bernays', Large

Per lb. Per 1000 Per 500 Per 100

Blue or White

Mercury Bichloride	73/10 gr. }	bottles of 25, per doz.,
Citric Acid	34/5 gr. }	For external use only. One tablet dissolved in a pint of water yields a solution containing one part of corrosive sublimate in one thousand. These tablets are poisonous and are intended only for preparing antiseptic solutions. They should be kept in a safe place. The <i>blue</i> tablets will be supplied on unspecified orders.

Tablets Mercury Bichloride Compound, Wilson's

Per lb. Per 1000 Per 500 Per 100

Blue or White

Mercury Bichloride	73/10 gr. }	bottles of 25, per doz.,
Ammonium Chloride	77/10 gr. }	These tablets are intended for preparing antiseptic solutions. They are made without the addition of any foreign matter and yield perfectly clear solutions with water. 1 tablet dissolved in a pint of water makes a solution of about 1:1000. These tablets, being poisonous, should be kept in a place apart from the usual internal remedies. The <i>white</i> tablets will be supplied on unspecified orders.

(NOTE:—With hard water, that is, water containing considerable lime salts, Wilson's Tablets are apt to give rise to precipitation. This cannot be avoided; and in such instances they should be replaced by Bernays' Tablets, the citric acid in which tends to prevent precipitation.)

The Squibb Label on a package is a positive guaranty for the uniform Purity and Reliability of the product. We make only ONE quality: the SQUIBB quality; and our prices are as low as they can be made for that quality. Specify SQUIBB'S.

Tablets Potassium Arsenite, Squibb

tube of 10, ; bottle of 100,

For preparing Fowler's Solution (Solution Potassium Arsenite).
One tablet dissolved in $\frac{1}{2}$ fluidounce of distilled water makes a preparation of the strength of *Liquor Potassii Arsenitis* U. S. P., but without compound tincture of lavender.

Tablets Potassium Permanganate 5 gr., Squibb

Per 1000, ; per 500, ; per 100,

For preparing disinfectant solutions. Dissolve 1 to 2 tablets in a quart of water. These tablets are made from the Squibb distinctive quality of all large-crystal permanganate, and dissolve quickly in water. (Also supplied in 1, 2 and 3-gr. sizes.)

†Veterinary Hypodermic Tablet Case, Squibb

containing 12 tubes,

Anti-Hog-Cholera Serum, Squibb 250 Cc. bottle.

Clear, potent, free from irritating foreign bodies and from disease-producing bacteria. Affords positive protection against Hog Cholera. Write for complete literature.

Ophthalmic Mallein, Squibb

For conjunctival test for Glanders.

5 capillary tubes, sufficient for 5 tests,
10 capillary tubes, sufficient for 10 tests,
1 Cc. vial, sufficient for 50 tests,

Torrey's Canine Distemper Vaccine, Squibb

5 Cc. vial (1 treatment),

An effective *prophylactic* measure against Distemper in dogs.

Torrey's Distemper Serum, Squibb 20 Cc. vial,

For the efficient treatment of cases of Canine Distemper. Complete literature sent on request.

Veterinary Tetanus Antitoxin, Squibb

In special aseptic Syringes: 500 Units, Immunizing Dose,
1500 Units, Immunizing Dose,
5000 Units, Curative Dose.

Veterinary Tuberculin, Squibb

For diagnosis of Tuberculosis in cattle, hogs and other animals.

2 Cc. vial, sufficient for 1 test,
20 Cc. vial, sufficient for 10 tests,

Veterinary Mallein Solution, Squibb

For subcutaneous test for Glanders.

2 Cc. vial, sufficient for 1 test,
20 Cc. vial, sufficient for 10 tests,

PART VI—MISCELLANEOUS

Glossary of Therapeutic Terms

Used Throughout This Book

Absorbents are products that absorb moisture, wound secretions, or gas, and render them inert.

Alteratives are agents which in some way not yet understood alter the processes of nutrition and excretion and thereby cure many diseases of a chronic type.

Amylolytics are starch-digestants.

Analeptics are reviving, restorative medicines or agents.

Analgesics or *General Anodynes* are internal remedies relieving pain, either by direct impression of the nerve centers in the brain or by diminishing the conductivity of the sensory nerve fibers.

Anaesthetics, *Inhalation*, are volatile substances producing narcosis or general insensibility when inhaled in sufficient quantity.

Anaesthetics, *Local*, are agents producing local insensibility on topical application.

Anaphrodisiacs. See Antaphrodisiacs.

Anhidrotics or *Anhydrotics*. See Antihydrotics.

Anodynes or *Local Anodynes* are preparations relieving pain on local application; they act by depression of the terminal nerve filaments in the skin or by impairing the conductivity of the sensory nerves.

Anodynes, *General*. See Analgesics.

Antacids are substances neutralizing acidity, forming salts with the acid present.

Antaphrodisiacs, or *Anaphrodisiacs*, depress the sexual function and diminish sexual desire; they act by lessening the excitability of the nerves of the genital organs, by depressing the genital centers in the brain and spinal cord, or by decreasing the circulation in the genitalia.

Anthelmintics are agents destroying or expelling worms inhabiting the intestinal canal; usually tapeworm remedies.

Anticachectics are remedies opposed to cachexia (depraved condition of general nutrition).

Anticatarrhals subdue inflammation of the mucous membranes (of the bladder, bronchi, nose, etc.).

Antidiabetics are preparations used in diabetes.

Antiemetics are medicines arresting vomiting (emesis).

Antiepileptics are agents employed in epilepsy.

Antiterrhines are drugs diminishing nasal discharge.

Antifats are medicines reducing obesity.

Antigalactics, or *Antilactagogues*, lessen the secretion of milk.

Antigonorrhemics are preparations used in gonorrhea. They act either by retarding the action of the sweat glands, or by depressing the excitability of the perspiration centers, or by diminishing the cutaneous circulation.

Antihydrotics, or *Anhydrotics*, check excessive perspiration.

Antilithics are agents tending to prevent the formation of and to dissolve uric acid calculi.

Antiluetics are agents used in syphilis (lues).

Antimalarials. See *Antiperiodics*.

Antineuralgics are preparations relieving or curing neuralgia. See also *Analgesics*.

Antiparasitics, or *Parasitocides*, inhibit the growth of or destroy the animal or vegetable parasites on the body.

Antiperiodics, or *Antimalarials*, are remedies for periodic or intermittent fever (malarial fever); they act by arresting the development in the blood of successive crops of the plasmodium malarix.

Antiphlogistics are preparations reducing inflammation.

Antipodagrics are gout remedies.

Antipruritics relieve itching (pruritus).

Antipyrics, or *Antisuppuratives*, are drugs opposed to the formation of pus (suppuration).

Antipyretics reduce elevated temperature (pyrexia), either by lessening the production of heat or by promoting the loss of heat.

Antirheumatics are rheumatism remedies.

Antiscorbutics are employed in scurvy (scurbutus).

Antiseptics prevent the development of microorganisms causing sepsis or infection.

Antiseptics, *Intestinal*, prevent or check intestinal sepsis or putrefaction.

Antisialics, or *Antisialagogues*, are agents lessening the secretion of saliva.

Antispasmodics overcome spasm of the muscular system.

Antitabetic, an agent, used in *tabes dorsalis*.

Antitetanics are antispasmodics employed in tetanus.

Antitoxins are substances developed in the body and counteracting specific toxins.

Antituberculars are agents used in the treatment of tuberculosis, local or general (*phthisis*, consumption).

Antizymotics, or *Antifermentatives*, prevent or check fermentative processes (*zymosis*) in the digestive tract.

Aperients are mild cathartics, producing softened stools without irritation.

Aphrodisiacs are agents stimulating the sexual desire and power.

Appetizers are medicines improving appetite.

Aromatics and *Condiments* are spicy, stimulant drugs.

Astringents contract organic tissue and thereby lessening or arresting discharge.

Bactericides are products that kill bacteria; analogous to disinfectants.

Bitter Tonics are vegetable bitter drugs improving appetite and imparting tone to the digestive organs.

Cardiac Depressants, or *Cardiac Sedatives*, lessen the force and the frequency of the heart's action, and subdue cardiac excitement.

Cardiac Stimulants increase the force as well as the frequency of the heart's action in depressed conditions of the circulatory apparatus.

Cardiac Tonics are drugs which stimulate the cardiac musculature, slowing and strengthening its contractions and imparting tone to the weakened organ.

Carminatives promote the expulsion of flatus (gas) from the gastrointestinal tract by increasing peristalsis, relaxing the orifices of the stomach, and stimulating circulation; they correct the tendency of certain drugs to gripe.

Cathartics are agents which increase or hasten evacuation of the bowels. According to their respective intensities or direction of action, they are classified as: *Aperients* or *Laxatives*, which excite only moderate intestinal peristalsis and produce softened passages without irritant action; *Cathartics* are *Simple Purgatives*, causing active peristalsis by their slightly irritant action and their stimulating effect upon the intestinal secretions; *Drastic Cathartics* are still more drastic in their action, producing violent peristalsis and watery stools, usually with tenesmus and

gripping, and decidedly irritating the intestinal mucosa; *Hydragogue Cathartics* especially produce watery discharges and include most of the drastic and saline purgatives; *Cholagogue Cathartics* stimulate the flow of bile and produce purgation in consequence, the stools being green-colored after full doses; *Saline Cathartics* stimulate the intestinal glands and by dint of their slight diffusibility cause an accumulation of fluid in the intestines, and this in turn produces the catharsis partly from the effect of gravity and partly by mild peristaltic stimulation.

Caustics, or *Escharotics*, are substances used to destroy pathologic organic tissue, either by abstracting water, or by uniting with the albumin, or by converting the tissue into carbon or gaseous substances.

Cerebral Depressants depress or temporarily suspend the functions of the cerebrum.

Cerebral Excitants or *Stimulants* increase the functional activity of the brain, partly by increasing the rapidity of the circulation and in part by a direct action upon the gray matter.

Chalybeates are ferruginous hematinics.

Cholagogues are agents promoting the secretion of bile.

Cicatrizants are vulneraries bringing about healing by cicatrization.

Circulatory Equalizers are medicaments restoring the equilibrium of the circulatory apparatus.

Condiments are spicy preparations stimulating digestion.

Corrigents are products employed to correct the taste, or to overcome untoward action such as gripping, etc.

Counter-irritants are used to produce superficial irritation in order to exert a good effect upon a deeper-seated, diseased part or organ.

Demulcents are mucilaginous or oily preparations soothing and protecting the parts with which they come into contact, generally the mucous membranes:

Deodorants are substances correcting foul odors.

Depilatories are means of removing superfluous hair.

Depressants diminish functional activity.

Dermics are agents used in skin diseases.

Diaphoretics and *Sudorifics* produce increased perspiration (diaphoresis) the latter being the more energetic.

Digestants or *Digestives*, are medicaments that digest food or aid functional digestion.

Discutients are local agents favoring the disappearance of tumors and inflammatory exudates.

Disinfectants are agents destroying disease germs and noxious products of decomposition or fermentation.

Diuretics increase the excretion of urine, either by raising the blood-pressure and thereby increasing the renal secretion, or by stimulating the secretory cells or the nerves of the kidneys.

Drastics, or *Drastic Cathartics*, are very energetic purgatives, producing violent peristalsis by their irritant action on the intestinal mucous membrane.

Ecbolics are agents promoting parturition or producing abortion, by stimulating the gravid uterus to contraction.

Emetics are substances causing vomiting (emesis), either by irritating the terminations of the gastric, pharyngeal, or esophageal nerves, or by action through the blood upon the vomiting center, or by reflex action from peripheral sources.

Emmenagogues are used for restoring or stimulating the menstrual function, either by direct action upon the uterine musculature or indirectly improving the blood and nerve system.

Emollients soften and soothe irritated or tense skin.

Epispastics are blistering agents; vesicants.

Errhines are drugs increasing nasal secretion, usually without causing sneezing.

Escharotics. See *Caustics*.

Excitomotors are agents exciting nerve activity.

Expectorants are remedies which promote expectoration by modifying the secretion of the respiratory mucous membranes and facilitating its expulsion.

Febrifuges are fever-dispellers; antipyretics.

Galactagogues are agents increasing the secretion of milk.

Gastric Tonics are preparations that tone up the stomach and improve digestion.

Germicides are agents that kill disease germs.

Hematinics improve the quality of the blood by increasing the proportion of hematin (coloring matter).

Hematopoietics promote the processes of blood-making.

Hemostatics are agents arresting internal hemorrhage.

Hypnotics are drugs producing sleep without suspending the consciousness of pain.

Intestinal Astringents constrict the intestinal mucous membrane and in consequence arrest or diminish diarrhea.

Laxatives are mild cathartics. See under cathartics.

Lenitives are gentle laxatives; aperients.

Lithontriptics are agents supposed to promote the solution of concretions in the excretory passages.

Masticatories are drugs intended for chewing to increase the secretion of saliva.

Motor Depressants decrease the functional activity of the spinal cord and other motor centers, and in sufficiently large doses paralyze them.

Motor Excitants increase the activity of the spinal cord and other motor centers, producing disturbances of motility, increased reflex excitability, and tetanic convulsions when given in large doses, the end effect being motor paralysis from overstimulation.

Mydriatics cause dilatation of the pupils (mydriasis).

Myotics produce contraction of the pupils (myosis).

Narcotics are drugs that produce stupor, coma, insensibility, and finally death from paralysis of the medullary centers, according to the doses given.

Nervines are remedies used in nervous diseases.

Nutrients are nutritious substances or foods.

Oxytocics are drugs promoting uterine contractions and thus hastening parturition.

Parasiticides inhibit the growth of or kill parasites found upon the body; Antiparasitics.

Parturients or *Parturifacients* induce or facilitate birth.

Peristaltics are agents stimulating or increasing the vermicular action of the intestines.

Protectives are substances spread over an injured part or other lesion, mechanically protecting it from the air, moisture, or friction.

Proteolytics are solvents or digestants of proteins.

Purgatives are rather powerful cathartics.

Reconstructives or *Restoratives*, aid in the rebuilding of lost tissue, by promoting constructive metamorphosis.

Refrigerants are agents having cooling and slightly febrifuge properties.

Resolvents are systemic remedies favoring the absorption of exudates or tumors.

Respiratory Depressants lower the activity of the res-

piratory center, rendering the respirations slow and shallow.

Respiratory Stimulants increase the activity of the respiratory center, accelerating and deepening the respirations.

Rubefacients redden the skin and hence act as counter-irritants.

Sedatives are medicaments allaying irritability of an organ or nerve center.

Sialagogues are drugs increasing the secretion of saliva.

Soporifics are mild hypnotics.

Sternutatories are drugs that produce sneezing when applied to the nasal mucous membrane.

Stimulants increase functional activity or some trophic or functional process; alcoholics are commonly called stimulants in a general sense.

Stomachics are medicaments which stimulate gastric digestion and restore tone to the stomach.

Styptics are agents arresting bleeding by their local application.

Sudorifics are drugs that induce profuse perspiration; energetic diaphoretics.

Teniacides and *Teniasuges* are worm-destroyers and worm-expellers respectively.

Tonics (General) are remedies improving the general condition of the system.

Uterine Tonics are supposed to impart tone to the uterine system.

Vasoconstrictors contract the bloodvessels, lessening the circulation therein and raising blood pressure.

Vasodilators produce dilatation of the peripheral bloodvessels and increase the circulation therein, thus tending to relieve internal congestions.

Vermicides are worm annihilators.

Vesical Sedatives lessen irritability of the bladder, quiet pain in that organ and lessen desire to urinate.

Vesical Tonics improve the tone of the bladder by increasing the contractile power of its muscular fibers, thus preventing both retention of urine and incontinence.

Vesicants are blistering agents; epispastics.

Vulneraries are agents employed for healing wounds.

The Metric System

In view of the fact that the metric system of weights and measures is now used in the U. S. Pharmacopœia and the National Formulary, to the exclusion of all others, a brief description of the system, supplemented by tables of equivalents, will no doubt be of interest to many who are unfamiliar with it.

The starting point of the metric system of weights and measures is the *meter*, the unit of linear measure, representing one ten-millionth of the polar quadrant of the earth—that is, the distance from the equator to the poles—and equivalent to 39.37 English inches.

The *gramme* is the unit of weight. It is derived as follows: the meter is divided into one hundred equal parts (centimeters); upon one such part, or centimeter, as a base a cube is erected having for its three dimensions one centimeter each. The contents of this are one *cubic centimeter*, which quantity of distilled water at its maximum density and 30 inches barometric pressure weighs *one gramme*, or 15.432 grains; and 1000 cubic centimeters (or mls) make one *liter*, or 33.81 fluidounces. One liter of distilled water at its maximum density and 30 inches barometric pressure weighs 1000 grammes, or one kilogramme, or 2.2 pounds avoirdupois.

The denominations representing the subdivisions of any unit are expressed by prefixing the Latin numerals *deci*, *centi*, and *milli* to the unit—meaning respectively one-tenth, one-hundredth, and one-thousandth. The multiples are expressed by prefixing the Greek numerals *deka*, *hecto* and *kilo*—meaning respectively ten, one hundred and one thousand.

For the use of those not familiar with the metric or decimal system, as it is also called, we append a few tables of equivalents. The values given in these tables are necessarily approximate, and hence should not be taken as units from which multiples can be made at liberty and exact results obtained. For instance, 0.2 gramme is given as the equivalent of 3 grains; 300 grains, however, would not be quite 100X0.2 gramme or 20 grammes, but 19.43 grammes.

The usual abbreviations and exact equivalents of the metric units are as follows:

M. = meter	=	1.09361 yards =	3.28083 ft. = 39.37	in.
dm. = decimeter	=	0.10936 "	0.32808 "	= 3.937 "
cm. = centimeter	=	0.01093 "	0.03280 "	= 0.3937 "
mm. = millimeter	=	0.00109 "	0.00328 "	= 0.03937 "

Kg. = kilogramme	=	1000	Gm. = 15432.356	grains
Gm. = gramme	=	1	" = 15.4324	"
dg. = decigramme	=	0.1	" = 1.5432	"
cg. = centigramme	=	0.01	" = 0.1543	"
mg. = milligramme	=	0.001	" = 0.01543	"

l. = liter	=	1000 mls.	=	2.1134 pints = 33.8148 fl. ozs.
dl. = deciliter	=	100 "	=	0.2113 " = 3.381 "
ml. = milliliter or mil =		1 mil.	=	0.03381 fl. oz. = 16.231 min.
(formerly cubic centimeter or Cc.)

Thermometric Equivalents

Fahrenheit and Centigrade Scales

RULES.—To reduce Centigrade degrees to those of Fahrenheit, multiply by 9, divide by 5, and add 32.

To reduce Fahrenheit degrees to those of the Centigrade scale, subtract 32, multiply by 5, and divide by 9.

1° of the Centigrade scale is equal to 1.8° of the Fahrenheit scale, and 1° of the Fahrenheit scale is equal to 0.555 or $\frac{5}{9}$ ° of the Centigrade scale.

Practical Urinalysis

For the Medical Practitioner

We give below a short practical talk on the every-day analysis of urine which the practicing physician is regularly called upon to perform. We have selected only such tests as are easy of application and reliable.

Normal urine has an amber color, a slight acid reaction, a peculiar nondescribable odor, and a bitter saline taste. Its specific gravity varies from 1.010 to 1.030 at 25°C. and the average quantity excreted in twenty-four hours is 1,500 mils or Cc. (about 50 fl. ozs.), 1,000 parts of healthy urine contains about 40 parts of solid matter, consisting chiefly of urea (23 parts), sodium chloride (11 parts), phosphoric acid chiefly as phosphates (2.3 parts), sulphuric acid mainly as sulphates (1.3 parts), uric acid (0.5 part), hippuric acid, leukomaines, urobilin, and organic salts.

The *specific gravity* of any specimen of urine can be conveniently and accurately determined by the use of *Squibb's Specific Gravity Apparatus*. This is supplied in a case containing a certified hydrometer, a thermometer, a glass jar and a tube of litmus paper.

The amount of *total solids* can be roughly estimated by Häser's method. This consists in multiplying the last two figures of the specific gravity by 2.33. For example, if the specific gravity is 1.020, multiply 20 by 2.33, which gives 46.6 Gm., the amount of total solids in each 1,000 mils (Cc.), of the urine. If a person voids 1,500 mils (Cc.) of urine daily the total amount of solids eliminated therewith is 46.6×1.5 , or 69.9 Gm.

The quantity of *urea* eliminated can be quickly and accurately estimated by the use of *Urease Squibb*. Complete information on this product will be found among the scientific notes at the end of this book.

Squibb's Urea Apparatus will also be found convenient for the purpose. Complete directions accompany the outfit.

The *abnormal constituents* found in various pathological urines are albumin, sugar, acetone, bile, indican, blood, casts, pus, spermatozoa, and epithelial cells.

In testing urine clean test tubes and fresh reagents are essential. A separate pipette should be used for each solution employed. (See list of Test Solutions, Part IV of this book.)

Albumin Tests

If the urine is cloudy, it should be filtered through filter paper—not talcum, fuller's earth, magnesium carbonate or charcoal; before testing it for albumin freshly voided urine should be allowed to cool, and no specimen of urine to which the heat test has been applied should be used for the nitric acid contact test. The first two tests are approved by the Association of Life Insurance Medical Directors and employed by the medical examiners.

HEAT TEST

If the urine is acid, take one-half test-tube of the filtered urine, add one-sixth of its volume of saturated salt solution (five ounces to the pint), hold the tube by the lower portion and boil the upper one-third. If a cloud forms it consists of either albumin or earthly phosphates. Add two or three drops of diluted nitric acid, boil again, and add three drops more of the acid; if the cloud remains albumin is present, but if the cloud entirely disappears the precipitate is phosphatic and albumin is absent.

If the urine is alkaline or neutral, take one-half test-tube of the filtered urine, add one-sixth of its volume of saturated salt solution and then a sufficient number of drops of diluted nitric acid, or of 33 per cent. acetic acid, to render faintly acid. This must be done in all cases where the urine is alkaline or neutral, for albumin will not be precipitated from such urine by heat. When this has been done apply heat as directed in the preceding paragraph.

NITRIC ACID CONTACT TEST (HELLER'S TEST)

Take a perfectly clean and dry test-tube having caliber of about one inch (a conical wineglass is preferable), and place into it about one inch of urine; allow concentrated nitric acid to flow slowly from a pipette down the side of the inclined test-tube underlying the urine. Wait five minutes. By use of dark background look very closely for

white band or cloud of albumin just above junction of acid and urine.

Or, place into a test-tube of large diameter about one inch of concentrated nitric acid, then incline the tube and from a pipette allow an equal volume of urine to flow slowly down the side of the tube, carefully overlaying the acid. If albumin is present, by the use of a dark background a zone will be seen just above the point of contact of the urine and the acid, the intensity of the cloud depending on the amount of albumin present. If no cloud is seen, the tube should be set aside, and re-examined in one-half hour, because the reaction for albumin is sometimes slow.

(NOTE:—Urates and copaiba and some other resins may give a white ring. The former are dissolved on heating; the latter, by the addition of alcohol. Albumin is not affected by either treatment.)

ESBACH'S PICRIC ACID TEST

Drop the urine into a clear quantity of Esbach's reagent made as follows:

Picric Acid.....	1 Gm.
Citric Acid.....	2 Gm.
Distilled Water q. s. ad.....	100 mils

A white precipitate or cloud forms if albumin is present. For the *quantitative* estimation of albumin, an Esbach's albuminometer proves very serviceable. It is inexpensive and simple of manipulation.

Tests for Sugar

In testing for sugar, if the urine has been found to contain more than a faint trace of albumin the latter should first be removed by boiling and filtering.

FEHLING'S TEST

Mix equal parts of the copper sulphate and alkaline tartrate solutions in a test tube and add a quantity of water equal to the combined volume of the two reagents used; the total quantity to prepare for a test need not exceed 5 mils (Cc.). Boil the mixture. If it remains clear, it

shows that the Fehling's solution is in good condition. Now add a few drops of the urine; warm the mixture but do not boil, and add a few more drops of the urine; warm again, and so on until the amount of urine added equals one-half the volume of test solution used. If the specific gravity of the urine to be tested is below 1.020 the urine may be added in equal volume to the test solution. If sugar is present, a yellow or red precipitate of suboxide of copper appears. This occurs quickly if much sugar is present. If the amount of sugar is less than one percent., the reduction will not appear until after several minutes—five to thirty. If a reduction does not take place in thirty minutes sugar is absent; if, on the other hand, the result of the test is still doubtful, the test tube should be set aside from twelve to eighteen hours and then the sediment examined to see if there has been any deposit of the suboxide of copper.

(NOTE.—We also furnish Fehling's Test Solution Elements complete for executing the test, and for the approximate *quantitative* determination of sugar.)

HAINES'S TEST

Put 1 fluidrachm of Haines's Test Solution Squibb into a test tube and boil gently; add 8 to 10 drops of the suspected urine and again boil gently. If sugar is present, a copious yellow or yellowish-red precipitate of copper suboxide separates; if the amount of sugar in the urine is small the reduction may require from five to thirty minutes, but if no change has taken place in thirty minutes sugar is absent. If the result of the test is still doubtful, the test tube should be set aside and allowed to stand from twelve to eighteen hours and then the deposit examined for the presence of a suboxide of copper.

(NOTES.—A grayish or greenish precipitate of phosphates which almost always forms through the action of the alkali in Fehling's or Haines's solution, should not be mistaken for a deposit of suboxide of copper, which is always yellow or red. Simple decolorization of either Fehling's or Haines's solution by the urine should not be considered a positive reaction for sugar, for sometimes a con-

centrated and strongly acid urine which is sugar-free, will decolorize the copper; on the other hand, a decolorization may indicate a beginning reduction of the copper, particularly when only a trace of sugar is present. Under such circumstances it is advisable to let the test tube stand for twelve to eighteen hours, before arriving at a definite conclusion. In testing for *traces* of sugar, when the tube is set aside it is well to dilute the contents with about 2 volumes of water. This reduces the density of the solution, and enables any cuprous oxide to subside that might otherwise remain in suspension.

Tests for Acetone

LANGE'S TEST

Mix 15 mls (Cc.) of the urine with 0.5 to 1 mil of acetic acid, and add a few drops of freshly prepared concentrated solution of sodium nitroprusside. Overlay with ammonia water. At the point of contact a violet ring forms.

LIEBEN'S TEST

Distill a portion of the urine after adding a few drops of phosphoric acid. To the distillate in a test tube add a few drops of compound solution of iodine (Lugol's solution) and then sufficient solution of potassium hydroxide to render the mixture decidedly alkaline. A yellow precipitate consisting of iodoform will at once form if acetone is present.

Tests for Bile Pigments

GMELIN'S TEST

Add fuming nitric acid to the urine contained in a test tube, by inclining the same and pouring down the side slowly; the acid will form a layer under the urine. If bile pigment is present colored rings form near the junction of the two liquids; a green ring above, and under this a blue, violet-red, and reddish yellow. If the green and violet red rings are wanting, it indicates the probable presence of lutein.

(NOTE.—Fuming nitric acid may be prepared by adding a few drops of formaldehyde solution to regular nitric acid and carefully warming until it assumes a red color.)

ROSSBACH'S TEST

Filter the urine through filter paper. After it has all passed through, apply a drop of nitric acid to the filter. A pale-red spot will be formed, surrounded by red, violet, blue, and green circles.

HELLER'S TEST

Pour about 5 mls (Cc.) of concentrated hydrochloric acid into a test tube and add enough urine to impart a color to it. Then carefully pour nitric acid down the side of the tube so as to form a layer on the bottom. A play of colors at the junction of the two layers indicates bile pigments.

Tests for Indican

MCMUNN'S TEST

Boil about 5 mls (Cc.) of the urine with an equal volume of hydrochloric acid and a few drops of nitric acid. Allow to cool, then shake with 2 or 3 mls of chloroform. The latter becomes colored violet.

JAFFE'S TEST

Mix 10 mls (Cc.) of the urine with an equal amount of concentrated hydrochloric acid and 2 or 3 mls of chloroform; add solution of chlorinated soda drop by drop, shaking after each addition. The chloroform will gradually become colored blue. Slight excess of the soda solution will cause no harm, but a large excess may interfere with the test.

Blood Tests

ROBERTS'S OCCULT BLOOD TEST

Blood may be conveniently detected by means of Dr. Dudley Roberts's Occult Blood Test Tablets, described in the Tablet section of this book. The microscopic and spectroscopic tests are also very satisfactory.

GUAIAIC TEST .

Mix equal volumes of fresh tincture guaiac and "ozonized" oil of turpentine (that is, old turpentine oil that has been exposed to the air and sunlight for some time), and cautiously overlay the mixture on the urine contained in a test tube. At the junction of the two layers a grayish precipitate forms and immediately above it a blue ring if blood is present. On agitation the entire mixture turns blue. Pus may give the same reaction, but the blue ring disappears on boiling; not so with blood.

Detection of Pus

The best means of detecting pus is the microscope. However, the following test is often employed: Let the urine settle in a conical graduate. Pour off the supernatant liquid from the sediment. Add to the latter a few drops of concentrated solution of potassium or sodium hydroxide, and stir. Pus becomes colored greenish, and gelatinizes to a tough mass. (Mucus is partly dissolved by this treatment, with the formation of a flocculent precipitate.)

Uric Acid and Urate Tests

Strongly acidulate the urine with hydrochloric acid and set aside for 24 hours. Yellowish-red crystals of uric acid will deposit on the bottom and sides of the test tube. By comparing this tube with one containing a similar quantity of normal urine treated in the same manner, an approximate idea may be obtained of the amount of uric acid in the abnormal specimen, sufficiently accurate for ordinary practical purposes.

The *murexide* or *Weidel's test* is conducted by evaporating to dryness a few drops of the urine in a watch glass or porcelain capsule, adding a drop or two of nitric acid, again evaporating carefully and then adding one or two drops of ammonia water. Murexide (ammonium purpurate) will be formed, and be shown by a purple coloration.

THE ERUPTIVE FEVERS

Name	Period of Incubation	Stage of Inf'n	Time of Appearance of Eruption	Character of Eruption	Duration of Eruption	Location of Eruption	Description	Duration of Disease	Convalescence	Points in Treatment
Cerebro-spinal meningitis	Unknown	Sudden	Second to fourth day	Herpes labialis, purpuric spots a dusky erythema		Herpes on the lips: purpuric spots over entire body		Variable with many sequelae	Lysis	Anti-Meningitic Serum; Autogenous Vaccine; Leucocyte Extract. Cold to head and spine. Move bowels early, and keep them open with Liquid Petrolatum (Heavy). Quiet, cool, darkened room. Plenty of water. Simple cereal gruel, and milk; starches in acute stage against acidosis. Morphine or codeine for pain. Ergot to contract blood vessels and prolong effect of narcotic; no ergot if blood pressure is high. Avoid cold sponging. During convalescence push food, give tonics; passive movements.
Erysipelas	From a few hours to three or four days	One to three days	Within twenty-four hours	A bright-red, polished efflorescence with a well-defined raised margin	Four to eight days	On face	Branny or in large flakes	One to three weeks	Crisis	<i>Internally:</i> Sedatives; stimulants; cathartics; Liquid Petrolatum (Heavy). <i>Locally:</i> Icthyol; satur. solution picric acid; 5% oily solution phenol (see <i>J. A. M. A.</i> , 1914, Oct. 24, p. 1513). <i>Subcutaneously:</i> Anti-Streptococcic Serum; Streptococcic Vaccine; Leucocyte Extract. For complete treatment, see <i>J. A. M. A.</i> , 1914, Dec. 6, p. 2048.
Measles	Ten to twelve days	Four days	Fourth day	Papules: small, dark-red, with crescentic borders. Complete in twenty-four hours	Four to five days	First on face, then downwards over the body	Branny and continuing eight to eleven days	Two weeks	Crisis	Isolation; warm, sunny room, free from draughts; colored spectacles. Boric acid solution for eyes; warm alkaline gargle or throat spray. Thorough initial movement of bowels; keep these open with Liquid Petrolatum (Heavy). Liquid diet if temperature high; no meat or broths during eruption; diet of cereals and milk; abundance of water. Hot sponging; dust body with talcum. Prolong and watch convalescence, otherwise there may be complications and sequelae. Call specialist for eye, ear, kidney or other complication.
Roetheln	Eight to seventeen days	One to two days	Within forty-eight hours	Maculopapular rose-colored, rounded, discrete macules; rarely confluent	Three days	Face and scalp, then downwards over the body	Slightly branny	Four to eight days	Crisis	No special treatment. Light diet. Keep bowels open with Liquid Petrolatum (Heavy). Keep patient indoors.

Scarlatina	One to twenty-one days	One to two days	Within twenty-four hours	Diffuse, scarlet, punctate	Seven to ten days	On neck, chest and face, then over the body	Scales or large flakes: continues about one week	Two to three weeks	Lysis	Isolation: Anti-Streptococcic Serum; Streptococcic Vaccine. Disinfect and sterilize utensils. Evacuate bowels thoroughly at first; keep them open with Liquid Petrolatum (Heavy). Prevent irritation of skin, keep it secreting. Hot sponging. Milk diet. Avoid salicylates and coal-tar synthetics generally; no caffeine unless necessary on account of high fever; no quinine. Sodium bromide for restlessness. Antiseptic gargle and spray for throat and nose; dust skin with talcum; during desquamation anoint skin with Liquid Petrolatum (Heavy); no phenol or mercury bichloride. Complications require specialist.
Typhoid fever	Five to thirty-five days	Six to eight days	Seventh day	Rose-colored, lenticular spots coming out in crops	For ten to twenty days spots come in crops, each crop lasting three to five days	On chest, abdomen, and back	Slightly branny or none	Three to four weeks	Lysis	Typhoid Vaccine. Quiet in bed. Cleansing cathartics, later, Liquid Petrolatum (Heavy) to keep bowels open and reduce putrefaction and toxemia. Keep mouth clean with alkaline antiseptic solutions. Opiates with intestinal antispasmodics for diarrhea; salol; hexamethylamine; yeast. Milk not good. (For diet, <i>see</i> J. A. M. A., 1914, Sept. 12, p. 929; also "Handbook of Therapy," J. A. M. A., 1916, pp. 130 <i>et seq.</i>). Careful, protracted convalescence desirable.
Typhus fever	Four to fourteen days	Five days	Usually on 5th day but may be on 3rd or not until 7th day	Measly spots; petechiae; streaks; of a mulberry-red color	Few days only, or may last throughout the course of the disease	On sides of chest and arms and back	Slightly branny	Two to four weeks	Crisis	"Symptomatic, following the suggestions made for other infections;" extermination of vermin, especially lice. (<i>See</i> J. A. M. A., 1917, Feb. 17, p. 576).
Varicella	Four to fourteen days	One to two days	Within twelve to twenty-four hours	Vesicles in crops	Five to eight days	Back, chest and arms	Crusts for five to eight days	Two weeks	Lysis	Isolation. Brisk cathartic at first; keep bowels open with Liquid Petrolatum (Heavy). Do not pick open vesicles. Warm baths; dust with talcum; celluloid mittens for young children. Simple diet; no meat.
Variola	Eight to fourteen days	Three days	Fourth day	Umbilicated pustules	Twenty-one to twenty-five days	On face and over the body	Crusts for twelve to twenty-two days	Four to five weeks	Lysis	Isolation. Free movement of bowels at first, then keep them open with Liquid Petrolatum (Heavy) as a means of preventing toxemia. Antipyretics if necessary. Painting with collodion, to prevent pitting; do not pick pustules; celluloid mask if necessary. Simple diet; no meat.

Obstetric Calendars

To use this obstetric calendar of Dr. WILLIAM L. CANTON, New York City, take the date of the beginning of the last menstruation, add to it the number in the circle which accompanies the name of the month in which it occurred, and to the sum prefix the name of the month next occurring in the same circle, going around the circle in the direction taken by the hands of a watch. This date is the day on which labor should occur. For example:

$$\text{May } 20 + 4 = 24 + \text{Feb.} = \text{Feb. } 24$$

$$\text{Sept. } 4 + 7 = 11 + \text{June} = \text{June } 11$$

If the sum of the numbers carries the date over into the succeeding month, use such succeeding month to determine the month of labor.

$$\text{Mar. } 30 + 5 = \text{April } 4 + \text{Jan.} = \text{Jan. } 4$$

SCHULTZE'S MODIFICATION OF NAGELE'S METHOD

Subtract three months from the date of the beginning of the last menstruation, then add to this date the number occurring in the segment of the circle bearing the name of the latter month. If the year is a leap year add the number in parentheses. The resulting date is that on which labor is due.

May 20 — 3 mo. = Feb. 20 + 4 = Feb. 24
 September 4 — 3 mo. = June 4 + 7 = June 11
 Mar. 30 — 3 mo. = Dec. 30 + 5 = Jan. 4

Drugs that Affect the Color of Urine

Carbolic Acid (Phenol) may cause it to be brown.

Diuretics and copious quantities of water and other beverages cause urine to become lighter in color.

Methylene Blue turns it green if acid.

Renal Irritants render it darker.

Santonin makes it more yellow if acid, purple if alkaline.

Senna may render it red if acid, yellow if alkaline.

Sulphonmethane (Sulphonal) may turn it very dark.

Drugs That Color the Stools

Bismuth salts color them black or very dark gray.

Colchicum and its preparations tint them greenish.

Iron and its salts color them black.

Mercury and its compounds make them green.

Purgatives cause them to be darker.

Drugs Excreted With the Milk

Arsenic and its compounds.	Opium and its preparations.
----------------------------	-----------------------------

Bromides.	Quinine and its salts.
-----------	------------------------

Hexamethylenamine.	Sulphur.
--------------------	----------

Iodine and Iodides.	Vegetable Cathartics.
---------------------	-----------------------

Lead salts.	Volatile Oils.

16	1.46	1.82	2.43	3.65	7.3	14.6	36.64	73.6	148.8	225.6	304.	384.	810.4	1824.	2430.	7296.

It should be observed that the above directions yield slightly more than the usually prescribed quantities—1 fluidounce, 2 fluidounces, etc.—owing to the increase in volume caused by the drug entering into solution. In the case of the weaker solutions—up to 1 or 2 per cent.—this increase is not appreciable.

SQUIBB'S MINERAL OIL

Known as

Liquid Petrolatum, Squibb Heavy (Californian)

Pure, Heavy, Viscous Mineral Oil, Crystal-clear, Odorless, Tasteless, and Non-irritating. An Efficient, Harmless Intestinal Evacuant and Lubricant.

For the successful treatment of intestinal stasis and constipation, the employment of a mineral oil of correct constitution and of highest purity is imperative.

In pursuance of our long-established and well-known policy to supply of every product only the best quality for the purpose intended, we have made a thorough and exhaustive study of all American and Russian mineral oils obtainable. After more than five years of such careful investigation and research we are able to state:

First.—There are two distinct types of mineral oil for internal use offered in the market, differing greatly in physical and in chemical properties, namely:

TYPES OF MINERAL OIL

(a) The light oils with no characteristic viscosity. They belong to the methane or paraffin series of hydrocarbons and include not only all the low gravity oils of the methane series which are imported from Russia but also all American mineral oils except the Squibb Mineral Oil.

(b) The heavy oils of considerable viscosity. They consist principally of polymethylenes, i.e., hydrocarbons of the naphthene series. These are derived solely from crudes found only in certain parts of Russia and also in California which latter crude has a naphthene content far greater than any other known crude in the world.

In short, numerous comparative tests made by us show the Californian heavy oil to differ in essential respects from all other American oils and also to be superior to the Russian oils.

We, therefore, have selected this *Californian heavy oil of high viscosity* as the best mineral oil obtainable for the internal treatment of intestinal stasis and constipation, and supply it alone on all orders.

It is refined under our control and exclusively for us only by the *Standard Oil Company of California*, which has no connection with any other Standard Oil Company.

This Liquid Petrolatum Squibb, Heavy (Californian), meets the quality specifications as follows:

It is pure; free from paraffins, inorganic matter, organic sulphur compounds and all injurious hydrocarbons such as anthracene, phenanthrene, chrysene and all oxidized acid and basic bodies.

It is *colorless, odorless and tasteless.*

SPECIFIC
GRAVITY

It has the Very High Specific Gravity

0.886 to 0.895 at 15° C. (59° F.)

0.881 to 0.890 at 25° C. (77° F.)

It has the Exceptionally High Natural Viscosity

571 to 586 Saybolt at 25° C. (77° F.)

265 to 278 Saybolt at 37.7° C. (100° F.)

VISCOSITY

or, according to U.S.P. standard,
7.0 to 7.6 at 25° C. (77° F.)

which is *over four points higher* than the requirements of the U. S. P. (IX Revision).

This high viscosity is of supreme importance because the clinical value of liquid petrolatum is in lubrication, and *true viscosity is the index of lubricating power.*

In selecting a mineral oil for internal use, it should be borne in mind that viscosity and specific gravity bear no necessary relation to each other.

Again it should be remembered that thin oil to which paraffin has been added may appear viscous, but upon testing it will show itself to be really a thin oil. A thin oil never lubricates as well as one that is highly viscous, and an oil of low viscosity may pass through the intestine

without producing any serviceable lubrication; also a thin oil is apt to cause leakage or dribbling.

Further, *viscosity diminishes very rapidly as the temperature rises*. This is particularly true of all thin oils. It is essential for the physician to know that the liquid petrolatum that he uses has *the necessary viscosity at the temperature of the inside of the intestine*. Therefore, special attention is called to the particularly high and efficient viscosity of Liquid Petrolatum Squibb, Heavy (Californian) at 37.7° C. (100° F.). Also, this viscosity is *natural*; the Squibb oil is not sophisticated in any way and therefore maintains its high viscosity at body temperature.

Action and Remedial Uses

Liquid Petrolatum Squibb, Heavy (Californian), is not an aperient, a laxative, a cathartic or a purgative, but a mechanical lubricant. It is not absorbed by the stomach or intestine, does not act on and is not acted upon by the fluids of the gastro-intestinal tract, and passes out of the body unchanged and in the same quantity that it entered. During its passage it lubricates the lumen of the gut, softens fæces, prevents injury of the mucous membrane by scybala,

EVACUANT
FOR
GENERAL USE

allows repair of an already abraded mucosa, relieves irritated or fatigued myenteric ganglia, and thus, by permitting a rapid passage of the intestinal contents, prevents the proliferation of bacteria and the production of toxins and a consequent toxæmia. In short, its use establishes and maintains a proper body drainage, i.e., a normal bowel activity, allowing better digestion and absorption of food, *without the formation of a habit*.

Liquid Petrolatum Squibb, Heavy (Californian), is used to correct the constipation of pregnancy, to avoid the hemorrhoidal condition which so often attends it, to prevent or relieve postpartum intestinal stasis, and for all other conditions for which it is indicated. *Liquid Petrolatum Squibb* may be used

DURING PREG-
NANCY AND
LACTATION

by the mother in any necessary amount, without fear of any influence on her child, since the oil does not enter the maternal circulation, but exercises its influence in a mechanical way in the gastro-intestinal tract alone.

It is used surgically as an aid in differentiating a surgical intestinal case from one non-surgical; also as a prophylactic to prevent the ascent of intestinal bacteria, thereby preventing secondary infection of biliary and other ducts; also to regulate the bowels before and after operation.

IN SURGERY

It is useful as a dressing for burns, also for nasal packings and spray.

Liquid Petrolatum Squibb, Heavy (Californian), sprays better than does a light oil, and lubricates the nasal mucosa more thoroughly and the lubrication is more lasting.

IN NOSE AND THROAT

As pure liquid petrolatum has no physiological action, it may be given in any quantities without harm. As it is not chemically active and resists chemical change, it is compatible with any medica-

ADMINISTRATION OF SQUIBB'S MINERAL OIL

cation indicated. However, certain facts about dosage are worthy of note. The length and calibre of the gastro-intestinal tract differ not only with age, but in different individuals of the same age, therefore the quantity of oil necessary for lubrication may vary. Also the conditions for which heavy liquid petrolatum is indicated are various, so the size and number of doses will vary. Then, too, there must be considered the nature, amount and consistency of the contents of the bowel; the pathological relaxation or hypertonicity of the intestinal walls; the degree of entero- or viscerop-tosis; the number, kind and place of adhesions, bands or kinks; also whether the life of the patient is active or sedentary.

Larger and more frequent doses are necessary at the beginning of treatment than after a normal intestinal condition has been established. *In every case a mini-*

um regulating dose should be determined and maintained, not because more oil would do harm, but because it would be wasted.

Intestinal lubrication can be produced best when the gastro-intestinal tract is comparatively empty. The best time for administration, then, is between meals and at bedtime. However, individual preferences for other times may be gratified.

For an adult, to begin with one tablespoonful twice a day between meals and on going to bed, later increasing or decreasing the same according to effect desired. Children and infants in proportion.

DOSAGE

As Liquid Petrolatum Squibb, Heavy (Californian), is odorless and tasteless, flavoring or a menstruum is not necessary, although such may be added if desired.

The following facts concerning Squibb's Mineral Oil are worthy of emphasis:

I. Liquid Petrolatum Squibb, Heavy (Californian) is a pure naphthene oil. This is an important fact because a naphthene oil is not likely to be contaminated with hydrocarbons which can be absorbed from the intestine by the human system, while all other American oils, as well as Russian oils, are quite likely to be so contaminated.

Explanation.—Paraffin crudes, i.e., petroleum as it comes from the earth, contain many hydrocarbons besides those which belong to the methane series. Such are olefins and acetylenes, and other unsaturated hydrocarbons. These unsaturated hydrocarbons are readily absorbed by the human system and cause bodily harm when so absorbed. In refining, it is more or less difficult to free a paraffin oil from all olefins, etc., if such are abundant in the crude, and an oil is undesirable for internal use if it contain any olefins or other unsaturated hydrocarbons.

Again, olefins, acetylenes, and similar hydrocarbons may, under certain conditions, be formed from pure paraffin oil, in spite of the greatest care to avoid the

formation of them. Thus, when crude petroleum is refined in an endeavor to get a paraffin oil as pure as possible, what is known as "cracking" may occur. "Cracking" is a technical term which denotes a change of some hydrocarbons into hydrocarbons of lower density and of other different characteristics. This is due to the heat, pressure, etc.

Sometimes "cracking" is done purposely to obtain these different hydrocarbons, but when paraffin is refined the heat and time necessary for refining may cause different hydrocarbons to form, although they may not be desired. It is therefore difficult to obtain a pure paraffin oil.

Naphthenes, however, are much more stable than paraffins and resist chemical action much more strongly. Again, in highly concentrated naphthene crudes, such as those from California, undesirable hydrocarbons or other compounds do not exist in any quantity, and the stability of the naphthene molecule allows a refining process which can easily free the oil from any and all undesirable compounds that may be present, and this without the formation of olefins or other unsaturated hydrocarbons.

Therefore, while a paraffin oil may not be a safe or otherwise desirable oil for internal use, a naphthene oil (refined from Californian crude composed almost entirely of naphthenes) is faultless.

Further, and what also is important, a naphthene oil is capable of a much higher viscosity than is a paraffin oil.

Such a pure, safe, and highly viscous naphthene oil is Liquid Petrolatum Squibb, Heavy (Californian).

II. Liquid Petrolatum Squibb, Heavy (Californian), is superior not only to all other American mineral oils, but also to the Russian oils.

Explanation.—For two reasons a naphthene oil is superior for internal use to any paraffin oil.

1. Because a naphthene oil is not contaminated with "unsaturated" hydrocarbons. Unsaturated hydrocarbons are olefins, acetylenes, etc., which because some carbon atoms in the molecule are not saturated with hydrogen, *i.e.*, have more than one bond of union, may

be absorbed from the intestinal tract and do harm when in the human system.

2. Also, a naphthene oil can be made to have a much higher viscosity, and the chief value of a mineral oil for internal use depends upon its high viscosity.

All American mineral oils except Liquid Petrolatum Squibb, Heavy (Californian) are composed chiefly of paraffins. Liquid Petrolatum Squibb, Heavy (Californian), is composed wholly of naphthenes. Further, a Russian mineral oil is not necessarily a naphthene oil. It is true that the Russian Baku oil has been found to contain about 80% of naphthenes. However, other Russian oils (like the Pennsylvania oils) are composed principally of paraffins. Thus a mineral oil, although it may be a genuine Russian oil, may be no better than an ordinary American oil, while even if it is a genuine Baku oil, the best that Russia has to offer, it is not as good as the Californian oil, which is the best the world has, because even in the crude it is composed almost entirely of naphthenes.

So then, if the best Russian mineral oil were under consideration, the Heavy Californian Oil is superior to it, because Heavy Californian Oil is composed entirely of naphthenes. This is both an important distinction and an important difference.

III. A highly viscous oil will lubricate the walls of the intestine and otherwise act in the bowels better than will a thin oil. A naphthene oil has a much higher true viscosity than has a paraffin oil. Therefore a pure naphthene oil is the best mineral oil for internal use.

Explanation.—Lubricating the intestine, softening the fæces, and inhibiting bacterial growth and the speedy removal of fæces from the colon are the four valuable factors in the successful working of mineral oil for internal use, and any mineral oil offered for internal use should fulfil all these requirements, which it cannot do unless it has a sufficiently *high true viscosity*.

The more viscous the oil the more slowly it is distributed over the inside walls of the intestine; the more

tenaciously it holds to the bowel wall, and the longer its lubrication remains effective. (Thin oils quickly run off from the walls, collect in the rectum, and leak out).

The more viscous the oil the more intimately it will mix with the fæces. Also a thin oil, even after mixing, may run out again. The more viscous the oil the longer it will remain mixed. Indeed, a highly viscous oil when once mixed with the fæces will not separate from them before the fæces are expelled. The permanent mixing effectually softens the fæces, keeps them soft, and favors speedy and easy expulsion, without injury to the bowel wall.

Again, the more thoroughly a mineral oil is mixed with the fæces the less water (moisture) the fæces can contain. Moisture is necessary for the growth and increase in numbers of bacteria. This keeping water out of the fæces is one way in which a viscous mineral oil inhibits bacterial growth.

Another way in which the growth and numerical increase of bacteria is prevented by a highly viscous oil such as Squibb's Mineral Oil is by coating with oil the material used as food by the bacteria, and also by coating the bacteria themselves.

All micro-organisms require food if they are to grow and multiply, and if this food is so enclosed in a coating of oil that the bacteria can not get at it, or make use of it if they do come in contact with it, or if the micro-organisms themselves are so covered that they cannot receive nourishment, they cannot grow and multiply. A thin oil will not effectively coat either food of use to bacteria or the bacteria themselves, while a highly viscous oil will coat both. Thus Liquid Petrolatum Squibb, because it is highly viscous at the temperature of the inside of the intestine, effectually deprives intestinal bacteria of the nourishment necessary for their growth and proliferation.

Again, a highly viscous oil effectively coats the inside of the intestine and permits the healing of any abrasions. It is quite common for food residues to wound the intestine. These little wounds may let bacteria and toxins

enter the blood stream. Thin oils neither coat the intestine thoroughly enough, nor for a sufficiently long time to permit healing. A highly viscous oil, such as Squibb's Mineral Oil, will effectively coat the abraded surface and give ample opportunity for healing.

IV.—A normal passage of the bowel contents is to be sought and maintained because an abnormal delay in the passing on and out of the contents of the intestine causes many conditions which produce ultimate discomfort or disease.

Explanation.—If there is stasis, i.e., a slowing of the normal movement of the bowel, then irritation of the lining membrane of the intestine and even inflammation of it may result. Delay allows the proliferation of bacteria. Now bacteria, by their action on proteids, may produce substances that may act as poisons (toxins) if they are absorbed into the system from the bowel.

Therefore if bacteria increase abnormally there may be produced toxins which a diseased intestinal membrane may absorb, and these toxins when in the system may cause trouble in parts of the body remote from where they entered. A thin mineral oil cannot keep up a normal movement of the bowel, or indeed any series of continual movements, unless it is taken so frequently and in such quantities as to cause distress, indigestion and leakage.

As Liquid Petrolatum Squibb, Heavy (Californian), is pure and highly viscous, it will produce and continue desirable bowel movements and finally restore normal bowel activity, and will do this without forming a habit of taking oil.

Further, as the necessary dosage of Squibb's Mineral Oil is small, it is an economical oil; also in any such dosage there will be no leakage or other disagreeable symptoms attending its use.

V.—If desirable results from the use of a good mineral oil are to be had, attention must be given to the natural way the oil works as well as to the natural way

the bodily organs are affected by oil, i.e., the size of the dose and the time of taking must be taken into account. This is as true of mineral oil as of any other remedy.

Explanation.—1. Mineral oil in the stomach may coat over large masses of food. Now, as it is necessary for the digestive fluids to have free access to food if a normal digestion is to take place, and as the digestive fluids cannot easily get at masses of food coated with mineral oil, it is evident that mineral oil should not be taken at a time when such coating of food could take place, namely within an hour before or after eating.

Although the chances of noticeable disturbance from this cause may be remote in many cases, inasmuch as it is never necessary to take mineral oil near the time of eating, it is best to avoid taking mineral oil within one hour of eating, either before or after.

2. Another physiological action of mineral oil, one with which you need not burden your mind but which, in order to meet some doctor's difficulty, you may find it necessary at times to recall, is this: As long as oil of any kind is in the stomach, the pylorus does not open as often or as fully as it does if no oil is present, and thus food is kept in the stomach longer than it should be retained. Such a delay may cause symptoms of indigestion. This condition can be prevented by avoiding the taking of oil near the time of eating.

3. If much more oil than is necessary to completely lubricate the walls of the intestine and to fully soften the fæces is taken, the excess may leak out, so it is well not to take excessive doses of the oil.

VI.—Liquid Petrolatum may dissolve intestinal toxins, hold them in solution and quickly eliminate them from the body.

Explanation.—Under abnormal conditions in the bowel, various products may be formed which not only may cause distress in the intestine, but also, if they are absorbed in the system, may act as poisons (toxins). These when held in solution by liquid petrolatum are

not as likely to be absorbed in the system as when they are free and they will be eliminated quickly with the stools. Sometimes these substances have color and the liquid petrolatum holding them in solution may be seen colored. However, all color of liquid petrolatum as it appears in the stools is not due to toxins. Many non-toxic substances may color it.

This speedy and non-irritating elimination of the contents of the bowel by liquid petrolatum is the factor of greatest value in preventing the formation, the retention and absorption of toxic material.

VII.—As Mineral Oil is not a medicine but an aid to physiological bodily functioning, it may be necessary to continue the taking of it for some time if the desired results are to be had.

Explanation.—The action of mineral oil when taken internally is that of a mechanical lubricant of the bowels, softener of the fæces, and remover of toxins. It protects the membrane and prevents injury to it, while it softens fæces and prevents the accumulation of moisture in them and hence inhibits the growth and the increase of bacteria. Thus it relieves irritation, allows healing of the intestinal membrane, and permits normal processes of nourishing the body to be restored. In other words, it puts a stop to abnormal processes and allows nature to re-establish normal activities. Nature cannot do this all at once. How long it will take will depend on how extensively and to what degree the normal processes have been deranged. The oil must be taken for a time long enough to permit complete restoration of the normal bowel activity. It is of interest that, however long the oil may be taken, no habit of taking oil will be formed. So the taking of mineral oil should be persisted in until the desired results are had.

VIII.—NOTE: For the reasons given above, and also for other causes which it is not possible to set forth within the limits of such brief summaries of facts as have been here made, it is important, when ordering mineral oil for internal use, to specify SQUIBB'S.

SQUIBB'S CHLORINATED ANTISEPTICS AND DISINFECTANTS

**Chloramine-T, Chloramine-T Paste;
Dichloramine-T; Chlorcosane;
Halazone Tablets.**

Chloramine-T Squibb is water-soluble, while Dichloramine-T Squibb is oil-soluble, for which Chlorcosane

GENERAL DESCRIPTION

Squibb is the one satisfactory solvent. Chloramine-T Surgical Paste is ready for immediate application. These are

available and easily used antiseptics and are of the highest value and greatest convenience in every-day civil practice.

Halazone Squibb is an effective disinfectant for small quantities of water for drinking.

It should be borne in mind that while the result of the researches of Dr. H. D. Dakin, the chloramines are not "Dakin's Solution." What is technically known as "Dakin's Solution" is a neutral solution of sodium hypochlorite. It is an efficacious antiseptic but requires for its successful use

special apparatus and a twenty-four hours' service of a nurse, inasmuch as a continuous application is necessary, as well as frequent bacterial examination of the wound. Then, too, the solution itself is difficult to make and quite unstable.

The chloramines are very different from this. They are the outcome of Dakin's efforts to overcome the difficulties presented by the neutral solution of sodium hypochlorite. So while the Dakin solution is efficacious and of value in military hospitals and other institutions where specialists in chemistry and bacteriology are in constant attendance and the nursing force is adequate, the chlor-

amines are of value in small hospitals and in every-day civil surgery as they do not require any special apparatus, specialists, or extra personnel. They are easily made ready for use by simply dissolving the Chloramine-T in water or the Dichloramine-T in Chlorcosane. They are applied by means of gauze, tampon, packing, or by spray. Renewal oftener than once in twenty-four hours is seldom necessary.

CHLORAMINE-T SQUIBB (WATER-SOLUBLE)

Chloramine-T, a name shortened for convenience in use from toluene-parasodiumsulphonchloramine, designates a white, crystalline solid,

CHLORAMINE-T

without odor, and containing 12.6 percent. of chlorine.

Readily soluble in water, its solutions have a bitter taste and are comparatively stable, no appreciable decomposition taking place upon exposure to ordinary room light and temperature. Compared with an equimolecular solution of neutral sodium hypochlorite, Chloramine-T gives up its chlorine less rapidly, has an antiseptic value about four times greater than that of the hypochlorites, is more efficient in the presence of blood than is neutral sodium hypochlorite, has a relatively slight solvent action on necrotic tissue, has a prolonged antiseptic activity, and is less irritating than the hypochlorites. "In severe septic conditions much of the Chloramine-T is promptly decomposed by the secretions. This is true of all antiseptics of the chlorine group and is even more marked in the case of hypochlorites than with Chloramine-T."¹

Dakin writes, "In place of the hypochlorite, the more stable Chloramine-T has been used to a considerable

COMPARED WITH SODIUM HYPOCHLORITES

extent and with particular success in fresh industrial accidents. It is usually used in 0.5-2 percent. solution and its action is similar to that of hypochlorite save that necrotic tissue

is less rapidly removed."² Again, "Chloramine-T can be used in stronger solution (up to two percent.) than can the hypochlorites. It is more stable and exerts more pro-

¹*A Handbook of Antiseptics*, by Henry Drysdale Dakin and Edward Kellogg Dunham.

²*Ibid.*

longed antiseptic action. . . . It is not toxic and is less irritating than the hypochlorites."¹ While in no case inferior, under certain conditions, it is considerably more efficient than are they.

Chloramine-T may be used in solution or dry (rubbed into gauze) or in a paste. Dakin says that Chloramine-T

RELATIVE ACTION OF

can be used in stronger solutions than can the hypochlorites. A two percent. solution is considerably more potent than

the usual solution of sodium hypochlorite. "It is not toxic and is less irritating than the hypochlorites and has but little solvent action on necrosed tissue. It is well suited for use on wounds previously cleansed with hypochlorites or Dichloramine-T, and in suitably dilute solutions may be used in the eye and on other sensitive parts."

"In equimolecular solutions its germicidal activity is about four times that of sodium hypochlorite," i. e., Dakin's Solution.² . . . "Its germicidal action is

GERMICIDAL VALUE OF

rapidly exerted and in most respects it resembles the hypochlorites closely, though decidedly less irritating than the

latter."³ It may be applied (for wound treatment) in solution, in the dry state as an impregnation of gauze, or in a cream-like paste. . . . "Although there were

no cases reported to show that four percent. solutions of

STRENGTH OF SOLUTION

Chloramine-T were unduly irritating, subsequent experience has shown that there is no occasion for exceeding a concen-

tration of 2 percent. For, as Chloramine-T has, weight for weight, as great a germicidal power as sodium hypochlorite, a 2 percent. solution is considerably more potent than the neutral solution of sodium hypochlorite (Dakin's Solution), usually employed (0.5 percent.). The 2 percent. solution may be used for the treatment of septic wounds, using the same methods as employed for the hypochlorites."⁴

¹Dakin and Dunham, *Handbook of Antiseptics*.

²Ibid.

³Ibid.

⁴Ibid.

Chloramine-T* has been used with success to irrigate the pleural cavity in empyæma, the urinary bladder, the gall bladder, sinuses, the urethra, etc. Also as a douche for the vagina, the ear and the nose. It has also been found to exert a satisfactory germicidal action in the eye when used in a 1:1000 solution.

To disinfect meningococcus carriers Chloramine-T used by steam spray and applied locally in water solutions has been employed with success. Dakin further writes, "In spite of limitations, chiefly imposed by anatomical conditions, valuable results have been obtained . . . with the use of antiseptics in the treatment of meningococcus carriers among soldiers"¹ in the following ways:

1. By use of steam spray and solution of Chloramine-T.

2. Local application of Chloramine-T in water and especially Dichloramine-T dissolved in oil. Gordon and Flack used 0.5 percent. solution of Chloramine-T or 1.2 percent. solution of zinc sulphate. "The Chloramine-T gave the better results especially with persistent carriers," although to a slight degree it was not as well tolerated as the solution of zinc sulphate. For full description of methods employed and the character of results the original articles* should be consulted. Since Chloramine-T is non-toxic and is stable, "the choice of strength must be left to the judgment of the surgeon. In practice, it is

STOCK SOLUTION OF

advisable to keep a 2 percent. solution in stock and dilute this, if necessary, either with water, or in case of considerable dilution, with normal saline solution. A 2 percent. solution is slightly hypotonic and when an approximately isotonic medium is desired, normal saline solution should be used

CORRODES METALS

as a diluent. Chloramine-T, like hypochlorites, has a corrosive action on most metals and should not be used for the

¹Dakin and Dunham, *Handbook of Antiseptics*.

*For authorities, exact references to quotations, details of uses, etc., see "Squibb's Chlorinated Antiseptics, Disinfectants and Solvents," Revised Edition, 1918. October, Brochure No. 9.

sterilization of instruments."¹ For sprays, atomizing tubes of glass are preferable.

Again: "Chloramine-T is well adapted for use in impregnated gauze, for which very few substances of high

DRY IN GAUZE

antiseptic value have proved successful. It is possible, for example, to incorporate in the gauze Chloramine-T to an amount equal to 25 percent. of the weight of the gauze . . . an amount, however, larger than is advisable, 5 percent. being adequate. . . . The gauze should not be moistened before use. . . . It can be used dry for lightly packing and subsequently moistened, if necessary, when in position."² Impregnated gauze is of most value in recent wounds to check progress of infection, therefore particularly useful for industrial accidents "where treatment can be promptly instituted."

Further: "Chloramine-T and Dichloramine-T give materially better results than the hypochlorites when acting on organisms in a blood medium."³

Chloramine-T Surgical Paste Squibb is composed of one percent. of toluene-para-sodiumsulphonchloramine in the neutral base sodium stearate.

RATIONALE OF CHLORAMINE-T SURGICAL PASTE

This paste is sufficiently firm not to flow away when applied to a wound and yet fluid enough to be moulded to the anfractuositities of a granulating surface

or of a fractured bone.

"Chloramine-T Paste is designed to maintain in an aseptic condition wounds which already have been dis-

FOR WHAT CHLORAMINE-T PASTE IS USEFUL

infected or to sterilize wounds which are only slightly infected. It should be applied only to wounds which yield small quantities of secretion; which have

little or no necrotic tissue, or which have only little or no infection."⁴ "Chloramine-T Paste cannot sterilize severely infected wounds."⁵ Carrel and Hartmann,

¹Dakin and Dunham, *Handbook of Antiseptics*.

²Ibid.

³Ibid.

⁴*Jour. Exp. Med.*, N. Y., XXVI, p. 97.

⁵Ibid., p. 118.

after prolonged investigation, state as their conclusions that "(1) under the conditions of our experiments chloramine paste maintains the asepsis of a wound already sterile, and sterilizes an infected wound. (2) Under the same conditions chloramine paste causes no apparent modification of the cicatrization curve of an aseptic wound."¹

Dakin and Dunham write: "When the frequent renewal of the antiseptic is impracticable or not desired, recourse may be had to pastes or oils . . . which embody a store of antiseptics that may be gradually utilized. The mild antiseptic action . . . of Chloramine-T Paste is often useful to maintain sterility and prevent reinfection of wounds which have previously received more vigorous treatment."² . . . "The paste is not oleagenous. It has a creamy consistency and can be spread readily. As the antiseptic is dissolved in the water constituting the chief bulk of the paste, it has ready access to the parts treated."³

For full directions for the use of Chloramine-T Surgical Paste, see *Journal of Experimental Medicine*, Vol. XXVI, pp. 91 and 97.

DICHLORAMINE-T SQUIBB (OIL-SOLUBLE)

(A) *Nature of Dichloramine-T*

Dichloramine-T, shortened for convenience in use from toluene parasulphondichloramine, is the name of a crystalline solid, slightly yellowish in color, of somewhat sweetish taste, and having a pungent odor resembling chlorine. It differs from Chloramine-T in having the sodium atom replaced by an atom of chlorine.

Dichloramine-T is comparatively stable under ordinary conditions but solutions of it are somewhat unstable. It is only very slightly soluble in water but rather freely

¹*Jour. Exp. Med.*, N. Y., XXVI, p. 118.

²Dakin and Dunham, *Handbook of Antiseptics*.

³*Ibid.*

SOLUBILITY OF

soluble in chlorinated eucalyptol, and, particularly, in chlorcosane (see below). It is a

very active germicide. Like certain other compounds containing chlorine, it should be protected from light and be kept in black bottles.

"Solutions are not permanent,¹ especially in the presence of liquid petrolatum, but a 10 per cent. solution of Dichloramine-T in chlorinated eucalyptol may be kept in a colored bottle for at least one month with but 25 per cent. decomposition." This solution may be mixed extempore with chlorinated paraffin oil.

Dakin and Dunham² say that "when prolonged (antiseptic) action is required and frequent application is impossible, recourse must be had to more stable mixtures which yield up their store of antiseptic slowly," such as the oily solution of Dichloramine-T.

Again: "Dichloramine-T in oil solution has a great advantage over the other chlorine antiseptics in that it may be used in high concentration, and its action is of much longer duration."

(B) Advantages of Dichloramine-T

Lee, Sweet, Hendrix and Le Conte³ write, "We offer as a solution of the serious obstacle of skin irritation of the usual chlorine preparations a practically stable, non-

NO IRRITATION
OF SKIN FROM

irritating, synthetic double-chloramine compound, toluene-parasulphondichloramine or Dichloramine-T, this chemical to

be used in strengths varying from 5 to 10 per cent. (from twenty to forty times the mass of germicide ever present in the usable concentrations of hypochlorites) dissolved in a chlorinated oil in order that the germicide will be liberated over a period of from eighteen to twenty-four hours instead of from thirty minutes to one hour, as with the hypochlorite solutions."

¹Dakin, Lee, Sweet, Hendrix, Le Conte, *Jour. Am. Med. Assn.*, LXIX, No. 1, 1917, July 7, p. 29, col. 1.

²Dakin and Dunham, *Handbook of Antiseptics*.

³*J. A. M. A.*, 1917, July 7, p. 29, col. 1.

(C) *How to Use Dichloramine-T*

Dakin and Dunham¹ say, "Dichloramine-T dissolved in oily media may be sprayed upon wound-surfaces or poured into accessible parts of deep wounds. . . . It is suitable for cases requiring prolonged antiseptic treatment, and for first dressings of recent wounds which do not require irrigation. It is used also for nasal antiseptis. It has great advantage over

other chlorine antiseptics in that it may be used in high concentration and its action is of much longer duration. Its application is extremely simple and it ordinarily need not be renewed more than once in twenty-four hours."

Dakin and Dunham recommend "for surgical purposes a 6.5 to 10 per cent. solution in treated eucalyptol and paraffin oil, . . . applied by a glass atomizer,

STRENGTH OF OILY SOLUTION

poured into wound cavities or introduced into sinuses by a cotton swab. The amount of the solution needed for each treatment is extremely small, 1 to 2 Cc. being sufficient for most moderate sized wounds."

"The technic of the application of² Dichloramine-T is simplicity itself in contradistinction to that of Dakin, Carrel, Dehelly and Depage. After a

careful surgical preparation of the wound at the primary dressing, and excision of all foci of infection and of devitalized tissues, the solution is applied on surface wounds with an atomizer in the form of a spray. In deep

SURFACE AND DEEP WOUNDS

wounds the cavities are filled with the liquid. When dependent drainage exists because of the location of the wounds, or when it has been made purposely, the lower opening is temporarily closed with gauze and then the cavity is filled with the oil, thus covering all the wound surfaces. The

¹Dakin and Dunham, *Handbook of Antiseptics*.

²Dakin, Lee, Sweet, Hendrix and Le Conte., *J. A. M. A.*, LXIX, No. 1, 1917, July 7, p. 29, col. 2.

dependent drainage is then re-established by removing the temporary gauze obstruction. This privilege of dependent drainage cannot be practiced with the use of aqueous

DEPENDENT DRAINAGE

solutions and the Dakin-Carrel-Dehelly-Depage technic in which the wound must act permanently as a basin to hold the weak solution. We believe that too much stress cannot be laid on this advantage. We have found that it is necessary to apply the oil but once in twenty-four hours, and the wounds should be covered with only a few layers of gauze to avoid the absorption of the oil by the dressings."

CHLORCOSANE SQUIBB

(THE ONE SOLVENT FOR DICHLORAMINE-T)

NATURE OF CHLORCOSANE

Chlorcosane¹ is prepared from paraffin wax by replacing part of the hydrogen with chlorine. It is a bland, almost tasteless oil, of high viscosity and in itself inert.

Chlorcosane, when at ordinary room temperature, dissolves Dichloramine-T only very slowly. "To prepare a solution . . . warm

HOW TO DISSOLVE DICHLORAMINE-T IN CHLORCOSANE

about one-quarter of the amount of Chlorcosane required to about 80° Centigrade, add the Dichloramine-T, stir or otherwise agitate the mixture until a solution is had, then add the remaining three-quarters of the Chlorcosane, which should be at room temperature, and if necessary filter the whole solution through dry fluted filter paper. Chlorcosane will hold from 8 to 10 per cent. of Dichloramine when the solution is at ordinary room temperature."

"Solutions of Dichloramine-T in Chlorcosane are remarkably stable considering the high reactivity of

STABILITY OF SOLUTION

Dichloramine. Light is the greatest cause of deterioration. Solutions should be kept in amber (or, preferably, black)

¹The substance of what is here said concerning Chlorcosane is taken from Major E. K. Dunham's *Herter Lectures*, New York, 1918, January.

bottles and protected from heat and moisture." As a rule a solution properly made will keep under favorable conditions for several weeks. Decomposition should be distinguished from the formation of precipitate on account of chilling the solution. If a solution of Dichloramine-T in Chlorcosane is chilled to a certain degree, Dichloramine-T will be thrown out of solution. By gently warming the solution this precipitate will be dissolved. For application to wounds a solution stronger than 5 per cent. of Dichloramine-T should not be used.

"The solution may be applied directly to the surface of the wound by any convenient way, spraying being considered the best." Since 5 per cent. and stronger

HOW TO USE SOLUTIONS OF

solutions are too viscous for use in a hand atomizer, a power apparatus is necessary with a pressure of from 15 to 20

pounds. It is better not to thin the solution by a diluent. If a suitable atomizer is not available, "a grooved director, cotton swab, medicine dropper or a glass syringe may be employed. . . . In ordinary wounds the application may be once in 24 hours and the dressings very light. For gangrenous or for foul wounds a more frequent application should be made, as the active chlorine is consumed more rapidly" (by such wounds).

For spraying the naso-pharynx a 1 per cent. or a 2 per cent. solution is best.

HALAZONE SQUIBB

(FOR THE DISINFECTION OF SMALL QUANTITIES OF WATER)

Dakin calls attention to the unsuitableness of chlorine gas, bleaching powder or sodium hypochlorite for the disinfection of small quantities of water. Also to the fact that while the acid sulphates of the alkali metals are "undoubtedly useful," the taste imparted by these salts is quite disagreeable to some persons, the solutions of them attack metallic water bottles, and chiefly they do not possess the potency or security afforded by a disinfectant of the chlorine group. Therefore the difficult problem of readily sterilizing small individual quantities of water was

carefully studied by Dakin because of its importance. As a result he found "the most suitable substance that we have as yet is parasulphondichloraminobenzoic acid."

Halazone is a short term for parasulphondichloraminobenzoic acid, $\text{Cl}_2\text{N}.\text{SO}_2.\text{C}_6\text{H}_4.\text{COOH}$. It is a white powder, "sparingly soluble in water and in chloroform and insoluble in petroleum." It is best kept and used in tablet form.

Dakin's experiments¹ show that "a concentration of 1:300000 will sterilize an ordinarily heavily contaminated water (e. g. containing coli, typhoid or cholera organisms) in about thirty minutes." It has little or no action on ordinary metals,—a "slight action . . . of no practical moment on aluminum—and imparts 'a just perceptible' but not disagreeable taste to water. Tea brewed with or without the addition of Halazone to the water cannot be distinguished. Even in larger doses Halazone is not toxic."

HALAZONE TABLETS	For use Halazone should be combined with dry sodium carbonate or with dry borax as such increases its solubility in water. Dakin considers the best form in which to use Halazone is tablets.
---------------------	---

"The practical success of the disinfectant depends very largely on the stability of the tablet." If properly made "tablets are quite stable enough for practical use."²

Dakin and Dunham³ write, "The problem of sterilizing small individual quantities of water . . . is much more difficult (than of large quantities), and up to the present it has not been perfectly solved. The use of hypochlorites for such purposes is difficult, owing to the instability of small tablets containing the minute quantity of active disinfectant. In their place acid sulphates of the alkali metals have been extensively used in tablet form, but the superior potency of many chlorine compounds would indicate that a stable potable chlorine disinfectant suitable for the sterilization of small quantities

¹*Handbook of Antiseptics*, Dakin and Dunham.

²*Ibid.*

³*British Medical Journal*, 1917, May 26, I, p. 682. See also *British Medical Journal*, 1916, Jan. 29, Proc. Roy. Soc. B. 89, 1916, p. 232.

of water is desirable. With this end in view, we have made a number of experiments with various types of substances, one of which we believe to be worth practical application. . . . The substance which is the most suitable that we have yet found is parasulphondichloraminobenzoic acid . . . and appears to be effective and reasonably stable. The presence of the COOH group confers a slight but definite degree of solubility in water, which is increased by dispensing it with alkaline salts such as sodium carbonate or bicarbonate, borax or sodium phosphate. . . . Since the synthetic name of the disinfectant is inconveniently long for ordinary use, we propose to apply the name 'Halazone' to the tablets containing it. . . . From the results (of experiments) it appears that a concentration of 1:300000 is sufficient to sterilize an ordinarily heavily contaminated water in about thirty minutes. Such a concentration could be relied upon to remove colon, typhoid, or cholera organisms. Special experiments showed that the substance in tablet form was efficacious when acting on water contained in aluminum bottles, although a very trifling action on the metal may be observed if tablets are allowed to remain undisturbed in long contact with the metal. We believe such action to be of no practical moment. The concentration of disinfectant given above is just perceptible to the taste, especially in warm water containing little organic matter, but the water is perfectly palatable. One point of advantage possessed by the present disinfectant over most hypochlorite preparations is the fact that the active chlorine is less rapidly used up so that the process of disinfection continues for a considerably longer period."

The various Squibb chlorinated products are obtainable in convenient packages, as follows:

Chloramine-T Squibb

Powder—

Amber vial, 582 gr.

Amber bottle, 6 $\frac{2}{3}$ oz.

Surgical Paste, 2 oz. tube, $\frac{1}{4}$ lb., 1 lb. bottles.

Tablets, 4.6 gr., in bottles of 100, 500 and 1,000.

Chlorcosane Squibb, $\frac{1}{4}$ pt., 1 pt. bottles.

Dichloramine-T Squibb, 1 oz., $\frac{1}{4}$ lb., 1 lb. bottles.

Squibb's Tablets

The great European war has again demonstrated the value of tablet medication. Tablets have the approval of the Medical Department of the U. S. Army and Navy, and have been used in the service almost to the exclusion of pills or capsules.

SUPERIORITY OF SQUIBB'S TABLETS

Squibb's Tablets differ from all others; they contain the Squibb quality of ingredients, the formulas are more scientifically studied, they are accurate in dosage, and because of rapid disintegration, produce prompt and definite therapeutic effects.

The rapidity with which the tablet responds in the presence of watery fluid, such as the saliva or gastric secretion may be demonstrated by dropping a calomel or bismuth tablet in water and noticing the result. Advantage may be taken of this fact in treating children or adults who cannot swallow a tablet. If the tablet is put into a spoon and a little water added the tablet breaks down to a powdery condition at once.

COATED TABLETS NOT AFFECTED BY AGE

The coating used on the Squibb Tablets is freely soluble, and applied only in sufficient quantity to mask the taste during the process of swallowing; it does not harden by age, and only momentarily hinders the disintegration of the tablet, at the same time it masks all disagreeable odor and taste, prevents decomposition, and retards loss of volatile ingredients.

Examinations in our Control Laboratory of some chocolate-coated Strychnine Sulphate Tablets Squibb over twelve years old, demonstrated the coating to be freely soluble, the disintegration very rapid and the medical content as active as when the tablets were made.

TABLETS OF INSOLUBLE MEDICAMENTS

Squibb Tablets containing such insoluble medicaments as Acetanilid, Aspirin, Calomel, Bismuth salts, Salol, etc., disintegrate at once in the presence of water, in the saliva, or in the digestive secretions.

Squibb's Superior Botanicals

All the botanical and other crude drugs used in the Squibb Laboratories are obtained from the best known sources and only those of first quality are employed. Shipments are accepted by us only after they have been examined and passed by our expert pharmacognosists, and by our Control Laboratories where they are tested chemically; and in many instances they are subjected to additional tests in our Physiological Laboratories.

ONLY FIRST
QUALITY DRUGS
ACCEPTED

Each drug is first examined macroscopically and microscopically, to establish its identity. Then it is thoroughly garbled to remove any foreign drugs or parts of the plant which may have been included in the harvesting and which are not included by the official definition. For example: If the bark of the root is the part which the Pharmacopœia directs to be used, we exclude all bark of the stem and all undue quantities of woody material. Likewise, when leaves are officially specified, stems, etc., must not be present.

CAREFULLY
EXAMINED FOR
FOREIGN MATTER

Also inspection must show plainly that the drug, after collecting, was promptly and carefully dried and kept in a clean place; and there must be no evidence of fermentation or of dirt accumulated during the drying. Fermentation caused by packing drugs before they are perfectly dry is one of the chief causes of change in the active principles.

Drugs for which the Pharmacopœia prescribes a definite alkaloidal strength, are assayed carefully to make sure they are at least of that strength; and in those instances where biological assay is officially suggested, the drugs are subjected to the proper tests

ASSAYED
CHEMICALLY AND
PHYSIOLOGICALLY

at our Physiological Laboratories. Furthermore, we also physiologically test and standardize our ergot preparations, as well as a number of other potent drugs for which there is no chemical assay established.

Squibb's Pure Spices

The purity of spices is a matter of as great importance as is the quality of the food to which they are added.

SPICES ARE OF DIETETIC IMPORTANCE

In the popular mind the sole value of spices lies in their property of imparting an agreeable flavor to food. Aside, however, from this well-known virtue, spices are of great dietetic importance, and their selection with the view of obtaining them of full strength and of a high standard of quality is deserving of careful consideration.

However, even to-day spices are adulterated, or low grades and exhausted residues are reinforced by good ones, to be offered as desirable condiments.

A LINE OF PURE SPICES

Appreciating this condition, the House of E. R. Squibb & Sons supplies a line of spices which are absolutely pure and of highest quality. These can unhesitatingly be recommended to all who desire condiments of distinctive quality and such as are free from sophistication of any kind. The whole spices are selected with the greatest care, assayed to make sure they come up to the high standards set by the Squibb Laboratories, and then immediately ground, great care being taken to avoid volatilization of the essential oils.

Inasmuch as these Squibb Spices are pure and consequently of exceptional strength, they require to be used in quantities much smaller than ordinary. Therefore, they are economical. A trial is convincing of their excellence.

The list comprises: Allspice, Cinnamon, Cloves, Ginger, Mace, Mustard (English), Nutmeg, Paprika, and Pepper (black, red and white). These

THE SQUIBB LIST OF PURE SPICES

spices are put up in air-tight, sifter-top cans holding $\frac{1}{4}$ lb., 2 ozs., and 1 oz. respectively, convenient for table use. They are sold only through druggists; they are not obtainable from grocers.

Squibb's Ergot Products

The House of E. R. Squibb & Sons has for a long time been recognized as the first producer of ergot preparations of exceptional quality and absolute reliability. What Dr. Stearns was to the introductory therapy of ergot, Dr. Squibb has been in its pharmacy; he studied it, experimented with it unceasingly, and established the name "Squibb's Ergot" firmly in medicine.

Medicinal ergot is a poisonous, parasitic fungus growing on rye. Its value depends very largely upon cautious selection, thorough cleansing, careful preservation, correct manipulation until all its essential principles are extracted, and proper packing of the finished product. *Spanish* rye ergot is far superior to all other kinds, as the peculiar atmospheric conditions of the Spanish peninsula favor a more mature and otherwise better growth of the fungus. Squibb's Ergot preparations are made from this Spanish rye ergot exclusively. Each year a fresh lot is secured, and upon receipt of an importation it is subjected to a very thorough process of cleansing by which all extraneous and inert matter is removed. Then as soon as practicable this clean ergot is ground and immediately extracted by the Squibb repercolation process, and made up into those preparations which are recognized as safe and efficient for administration.

SPANISH RYE
ERGOT BEST

SQUIBB'S ERGOT
PRODUCTS TESTED
PHYSIOLOGICALLY

Finally, Squibb's Ergot preparations are carefully tested physiologically according to the method recommended by Drs. Edmunds and Hale (*Hygienic Lab. Bull.* No. 76), and admirably conform to their standards. Particular mention may be made of Squibb's *Sterile Ergot*, an alcohol-free preparation for hypodermic or intramuscular injection, physiologically standardized so that each mil (Cc.) represents 2 Gm. of Ergot.

Consequently, the use of Squibb's Ergot in any of its forms is in no sense a matter of clinical experiment, so often attended with serious risk, but the application of a proven remedial agent carefully prepared, tested and standardized.

Squibb's Cascara Products

Cascara Sagrada (*Rhamnus Purshiana*) was discovered in Montana, on the banks of a tributary of the Columbia River, about 1805, by the members of the first North American transcontinental exploring expedition under the command of Lewis and Clark. The plant, along with a number of other unknown drugs collected on the journey, was sent to Frederick Pursh, a German botanist of Philadelphia, for botanical study; hence the name "*Rhamnus Purshiana*."

DISCOVERY OF CASCARA SAGRADA

Fresh Cascara Sagrada is believed to contain a *ferment* which is said to be responsible for unpleasant results produced when the drug is administered; while it is maintained that the *seasoned* bark, such as has been kept a year or more before elaborating it, owes its valuable properties as a laxative, *free from griping*, to the fact that the ferment has been exhausted

WELL-SEASONED BARK ONLY VALUABLE

by standing. The Squibb Laboratories do not use any cascara bark unless it has been seasoned for *more than a year*; and of such only the choicest bark is employed.

This care insures a maximum of efficacy and a freedom from undesirable by-effects to the various preparations of cascara which are marketed under the Squibb label. These include: Extract, Fluidextract, Aromatic Fluidextract, and Fluid Cascara Aromatic Non-Alcoholic. This

SQUIBB CASCARA PREPARATIONS

non-alcoholic product is identical with Aromatic Fluidextract Cascara U. S. P. in strength and flavor, but the alcohol has been omitted without sacrificing the keeping qualities of the preparation. It has the therapeutic advantage of eliminating any alcohol effect, a result especially desirable in the case of children. It can unhesitatingly be recommended in preference to the official preparations, and it is offered at a lower price because of the absence of alcohol. For descriptions of these various preparations, see the respective titles in Part I of this book.

Squibb's Compound Alum Powder

formerly known as Surgical Powder, consists of exsiccated alum, camphor and carbolic acid. It was introduced by Dr. E. R. Squibb in 1868, and has steadily grown in favor among the medical profession as an emergency dressing and wash.

As a *styptic*, it coagulates blood and at the same time contracts ends of capillary vessels, thus stopping hemorrhage unless it be from a large artery.

As an *antiseptic*, it is useful as a first dressing for wounds, to which it may be applied either dry or in solution.

As a *stimulant*, it hastens formation of healthy granulation tissue, thereby causing rapid healing of wounds.

As an *escharotic*, it serves to destroy exuberant growth of granulations and promote normal healing.

As an *absorbent*, it keeps the wound dry, rendering foul discharges and infection from outside impossible.

As an *astringent*, it prevents hypersecretion and tends to restore the mucous glands to normal activity.

As an *Emergency Dressing*, Squibb's Compound Alum Powder will control hemorrhage and prevent sepsis, giving time to prepare necessary material or transport the patient where all is in readiness.

As a *Routine Dressing*, Squibb's Compound Alum Powder serves for protecting approximated edges of clean wounds; for protecting and hastening repair in all wounds with loss of tissue, also of granulating abdominal wounds after laparotomy; for cleaning up ulcers of any size and nature, etc.; it is also useful in solution for the nose and throat, as a vaginal douche, etc., and as solution or powder in post-partum hemorrhage.

Squibb's Compound Alum Powder should not be sprinkled on sparingly, but applied abundantly.

Although in some cases its application may cause slight pain, all discomfort soon passes away and the wound remains painless.

Squibb's Compound Alum Powder is offered only in sifter-top cans, which should be kept well closed and in a dry place when not in use.

Solution Hypophysis Squibb

(SOLUTION OF PITUITARY BODY)

Solution Hypophysis Squibb is a sterile aqueous solution of the water-soluble principles of the posterior lobe of the pituitary body (hypophysis cerebri). It is standardized, a 1:20,000 dilution of it having the same activity on the isolated uterus of the virgin guinea pig as a 1:20,000,000 solution of histamine.

PHYSIOLOGICAL ACTION OF Solution Hypophysis Squibb is a vaso-constrictor. It is also a powerful stimulant for unstriated muscles, especially those of the uterus. It acts also on the intestines and bladder, particularly when there is lack of normal tone. It exercises apparently a specific action on renal activity.

USES OF It has been employed with good results to stimulate the contractions of the uterus in the second stage of labor, in uterine atony and post-partum hemorrhage, as well as in certain other forms of uterine hemorrhage. It has also found use in certain forms of pulmonary hemorrhage. In post-operative shock and other conditions of low blood pressure its use has been followed by favorable and persistent results. Its stimulating action on the intestines and bladder have made it useful in the retention of urine and the intestinal paresis and distention that may follow abdominal operations. In diabetes insipidus its administration has effectively controlled the thirst and polyuria.

DOSAGE The dose ranges from 0.3 to 1.0 Cc. (5 to 16 minims) hypodermically or intramuscularly, repeated in 30 to 60 minutes if necessary. The smaller doses are used when it is desired to stimulate the contractions of the uterus in labor; the larger to control uterine hemorrhage or relieve shock or visceral atony. The skin at the point of injection should be sterilized, preferably by painting with tincture of iodine. Solution of Hypophysis Squibb is put up in 1 Cc. (1 mil=16 min.) and 0.5 Cc. (0.5 mil=8 min.) ampuls, and offered in boxes of 6 ampuls.

Thromboplastin Squibb

Thromboplastin Squibb is a tissue juice from ox brain. It contains all the cerebral thromboplastic substances, including a full complement of kephalin. It is tested physiologically, standardized, and then kept aseptic by the addition of 0.3 per cent. of tricresol.

PURPOSES

Thromboplastin Squibb is a trustworthy hemostatic ready for instant use. It is efficacious in all kinds of capillary hemorrhage. It will not, however, take the place of a ligature when the hemorrhage is from large veins or arteries or from arteries of moderate size. It should not be relied upon when the vessels, however small, can be closed by clamp ligature or torsion.

Thromboplastin Squibb controls hemorrhage by furnishing to the blood principles necessary to ensure *normal* clotting. It does not act mechanically by forming a local clot nor by constricting the vessels but by a true physiological action.

MODE OF ACTION

Thromboplastin Squibb is supplied in two forms, i. e., either for use locally or for use hypodermically. As a rule local application, which should always be free, is effective. If it does not prove so, then Thromboplastin *Hypodermic* Squibb should be injected.

Thromboplastin Squibb has been used successfully in hemophilia; hemorrhage from the umbilical cord; from the frenum of the tongue; from the jaw after extraction of teeth; for bleeding after tonsillectomy removal of adenoids, etc. By oral administration it has controlled hemorrhage from the stomach also in some cases from the intestine. The farther from the pylorus the site of hemorrhage is the less is to be expected from the administration of Thromboplastin Squibb by mouth as it is likely to lose some of its activity on account of digestion during its passage through the stomach, duodenum and jejunum. It has proved efficacious in nasal hemorrhage from diphtheritic and other toxic conditions, in hemorrhage attending acute leukemia, in bleeding from the kidneys, urinary bladder, prostate, spinal cord, etc.

WHEN INDICATED

Leucocyte Extract Squibb

Leucocyte Extract Squibb is of use in combating infections, and is a product the value of which has been verified by biological investigations and established by clinical experience.

PURPOSE

It is prepared under the strictest aseptic conditions, according to the method of Hiss. By injecting a sterile vegetable protein into the pleural cavities of rabbits or other animals, a purulent exudate is incited, which, when collected, centrifuged, purified, extracted, and proved bacteria free, constitutes Leucocyte Extract Squibb.

PREPARATION

It should not replace specific vaccines, specific serums or specific antitoxins. It is of use in connection with the indicated vaccine or serum in acute constitutional infections, such as pyemia, septicemia, and sapremia. Distinct improvement has also been shown to follow its use in labor and post-influenza pneumonia. Equally good results are obtained in erysipelas. It may be used alone while an autogenous vaccine is in preparation or may be used by itself when it is impossible to obtain a satisfactory diagnosis, i. e., impossible to determine what microörganism causes the infection.

INDICATIONS FOR

In such cases, as a rule, Leucocyte Extract Squibb is more desirable than a stock vaccine, and its use is always more rational than that of a mixed vaccine.

COMPARATIVE VALUE

Leucocyte Extract Squibb is put up in syringes of 10 mils (Cc.) each, which is the average dose to be given one to three times daily. After thorough sterilization at the point of injection the extract is injected subcutaneously. The most desirable sites for injection are the abdominal wall and the loose tissues of the back. Complete literature will be sent physicians on request.

ADMINISTRATION

Squibb's Assayed Tinctures

The physician when prescribing an alkaloidal tincture, should know, and has a right to demand, that a product be dispensed from which he may obtain prompt action and definite results. The Squibb Assayed Tinctures are made from the best selected drugs, in strict accordance with the official formulas and processes, and are carefully assayed and accurately standardized. In the case of the potent tinctures for which the Pharmacopœia demands or merely recommends *physiological* assays, those preparations are tested by the methods therein outlined and proved to be of standard activity. Uniformity of strength may therefore be depended upon. The following list comprises the tinctures to which assay processes are applied according to the latest revision of the U. S. P. A comprehensive description of each, giving its properties, uses and doses, is given under the respective titles of these tinctures in Part I of this book. We here append a list of them:

Tincture Aconite Root Squibb (*Tinctura Aconiti*).

Tincture Belladonna Leaves Squibb (*Tinctura Belladonnæ Folium*).

Tincture Cannabis Squibb (*Tinctura Cannabis*).

Tincture Cinchona Squibb (*Tinctura Cinchonæ*).

Tincture Cinchona Compound Squibb (*Tinctura Cinchonæ Composita*).

Tincture Colchicum Seed Squibb (*Tinctura Colchici Seminis*).

Tincture Digitalis Squibb (*Tinctura Digitalis*).

Tincture Digitalis Fat-free Squibb.

Tincture Hydrastis Squibb (*Tinctura Hydrastis*).

Tincture Hyoscyamus Squibb (*Tinctura Hyoscyami*).

Tincture Nux Vomica Squibb (*Tinctura Nucis Vomicae*).

Tincture Opium Squibb (*Tinctura Opii*).

Tincture Opium Deodorized Squibb (*Tinctura Opii Deodorati*).

Tincture Physostigma Squibb (*Tinctura Physostigmatis*).

Tincture Stramonium Leaves Squibb (*Tinctura Stramonii*).

Tincture Strophanthus Squibb (*Tinctura Strophanthi*).

Physiological Standardization

Physiological standardization is the application of quantitative physiological methods to medicinal products in order that they may be uniform in potency. The idea of such standardization is not new, nor are the methods employed new, but are such as have been in constant use for some of the finer work of physiology and pharmacology.

One great value of physiological standardization is the determination of the potency of certain drugs of therapeutic importance which do not, however, lend themselves to assay by chemical or by physical methods. This may be because the active principle is unknown or because the chemical reactions or the physical properties revealed are not sufficiently distinctive to be of value. Further, the active principle, although known, may be present in such a very minute amount that assay by chemical or physical methods can not be accurate. Also, in drugs in which there are several active principles, chemical and physical analyses may for many reasons be impractical. If, therefore, such drugs can be standardized physiologically, that is to say, be made in such a way that a certain bulk of them will always produce a certain physiological effect, a condition most valuable for clinical medicine has been established.

The United States Pharmacopœia, IXth Revision, has provided physiological assay for certain drugs. All these drugs are assayed by the Squibb Laboratories according to the U. S. P. method, the details of which can be learned from the Pharmacopœia. Furthermore, this standardization has been extended to other drugs by the Squibb Laboratories and additions to the list will be made as rapidly as processes can be devised for such standardization.

Thus the Squibb Laboratories constitute one of the effective means by which knowledge of drugs, the science of pharmacology, is advancing and by its contributions to general knowledge assume a share in the establishment of medicine as an exact science. Brochures on the subject of physiological standardization may be had by physicians upon application.

Sodium Phosphate Squibb

Sodium phosphate is now prescribed extensively by the medical profession and is also used by the laity as a laxative and mild purgative. It is also said to regulate the secretion of bile and is, therefore, a very important article.

Much of the sodium phosphate of the market contains arsenic. This poisonous impurity is due to the sulphuric acid used in the process of manufacture. Medical literature describes numerous instances of serious arsenical poisoning which it attributes to the use of sodium phosphate containing this impurity. In many cases, although the quantity of arsenic was comparatively small, the accumulation of arsenic in the system from repeated doses of the sodium phosphate produced distressing and in several cases disastrous results.

Believing, therefore, that the physician should have at hand and that there should be available for the public a sodium phosphate that is free from arsenic, the Squibb Laboratories furnish a product that fully meets such a demand.

All of Squibb's sodium phosphate is tested for arsenic by a method that is far more delicate than that suggested by the U. S. P., IXth Revision, and in all analyses large quantities of the sodium phosphate are used in order to be sure that Sodium Phosphate Squibb can be considered arsenic-free even when used in very large or in often repeated doses. Furthermore, because of the process of recrystallization which it has undergone, Squibb's Sodium Phosphate is free from all other objectionable impurities. It is colorless, odorless, and has a cooling, saline taste. The finished product is granulated to permit of more convenient dispensing and dosing than is obtainable with the ordinary crystalline variety.

It enjoys appreciative use among those who realize that quality in medicine is the first consideration. Because sodium phosphate is normally a very efflorescent chemical the Squibb product is placed on the market only in 1 lb. and $\frac{1}{4}$ lb. sealed tin containers and not in the cheap paste-board cartons in which so great a part of the sodium phosphate of commerce is found.

Squibb's New Silver Preparations: Solargentum and Protargentum

Solargentum Squibb (sol=colloid, argentum=silver) is a true colloid of metallic silver; and **Protargentum Squibb** (prot=protein, argentum=silver) is a

NATURE OF

true colloid of a salt of silver.

Each possesses in full the properties of its respective class. See

"Silver Preparations, Colloidal" and "Silver Protein Compounds" in *New and Nonofficial Remedies*, 1919.

These Squibb silver preparations are of use whenever colloidal silver or silver protein is indicated: for instance,

INDICATIONS FOR

for prophylaxis or for the treatment of gonorrhea and other infections of the urethra; for conjunctivitis and other infections of the eye, including

ophthalmia neonatorum; and for infections of the ear, nose, throat, etc.

Both Solargentum Squibb and Protargentum Squibb are freely soluble in either cool or warm water. For

SOLUTIONS OF

making "solutions," distilled water should be used. The temperature of the water preferably

should be low, and even for use cool "solutions" are more efficacious than warm. They should never exceed 37° C (98.6° F). When made properly, "solutions" of Solargentum Squibb are stable. "Solutions" of Protargentum Squibb, however, are not stable and therefore they should be made only as wanted. A prescription for Protargentum Squibb should call for a "fresh solution" and for only enough to last the patient three days or less.

In making aqueous "solutions" of Solargentum Squibb, the entire quantity of the flakes may be put into the required amount of water and the whole stirred or shaken. For a "solution" of Solargentum Squibb in glycerin, first moisten the required quantity of flakes with a few drops of cool water (only enough to moisten them and make them into a very thick paste), then add the glycerin (cold), in which the pasty Solargentum Squibb will dissolve quickly. Colloidal silver is insoluble in

glycerin alone. *Caution.* It has been recommended to heat the glycerin in a mortar and grind up the colloidal flakes while heating. Such a procedure almost invariably will destroy the colloid and render the "solution" irritating and less active as an antiseptic. As this heating process is often used by pharmacists, care should be taken that only the "cold water-glycerin" process be used.

To make a "solution" of Protargentum Squibb it is best to sprinkle the required amount of the powder upon the surface of the water and allow the Protargentum Squibb to dissolve itself gradually, which it does in a very short time. If simple stirring is attempted, the wet powder will mass itself on the stirring rod and time and patience will be lost. If preferred the Protargentum Squibb may be triturated with water in a mortar.

Solargentum Squibb contains from 19 per cent. to 22 per cent. pure silver, and is an antiseptic and an effective germicide. When mixed with water it will not ionize,

PROPERTIES OF SOLUTIONS

therefore it will not precipitate or coagulate protein. Consequently in any strength "solutions" it is non-caustic, non-

astringent, non-irritating. The usual strengths of "solutions" of Solargentum Squibb for clinical use are from 1 per cent. to 25 per cent., or even 50 per cent.

Protargentum Squibb contains about 8 per cent. of pure silver. Upon mixing with water the disperse phase ionizes while in colloidal suspension. Its "solutions," therefore, are not permanent, are slightly irritating and somewhat astringent. The usual strength of "solutions" of Protargentum Squibb for clinical uses are from $\frac{1}{4}$ per cent. to 5 per cent., an average strength of 2 per cent. being ordinarily preferred.

It should be borne in mind that a colloid of metallic silver always can be used in a "solution" of much greater

IMPORTANT NOTE

strength than can a silver protein, notwithstanding that the actual silver content of the colloid is much greater than that

of the protein. Further, for equal antiseptic and germicidal action, greater strength of the metallic colloid is

necessary. For instance, although Solargentum Squibb contains about 20 per cent. of silver, two-and-a-half times as much as Protargentum Squibb contains, the strength of clinical "solutions" of Solargentum Squibb are from 1 per cent. to 50 per cent. as against an average strength of 2 per cent. for Protargentum Squibb.

USE BY U. S. N.
AND U. S. A.

The United States Navy has been and is purchasing Solargentum Squibb in very large quantities for general distribution to their medical stations, both on land and sea, at home and abroad.

Also the Medical Department of the United States Army has been and is using Solargentum Squibb in rapidly increasing quantities. Further, it has adopted Protargentum Squibb for the prophylactic treatment of venereal diseases, the strength of "solution" authorized being 2 per cent.

Squibb's Fluidextracts

These are manufactured from the most active drugs obtainable on the market or possible to procure by direct importation. Thorough exhausting of the assayed and otherwise tested drug assures the production of fluid-extracts of a standard strength. These all contain the maximum amount of active principle and accurately represent the drug. The process of extraction employed is the well-known repercolation process, which originated in the Squibb Laboratories. The menstrua are those which most effectively extract the medicinal ingredients of the drugs, and thus are theoretically true solvents of them; and the strength of the alcohol employed is fully that prescribed by the U. S. P. In all instances in which the U. S. Pharmacopœia prescribes a definite alkaloidal strength for the assayed fluidextracts, the Squibb products are accurately adjusted to that standard; and where the Pharmacopœia requires or merely recommends a *physiological* assay process the Squibb fluid-extracts are carefully tested and standardized thereby.

Squibb's Biological Products

The production of antitoxic serums, bacterial vaccines and similar biological products, for the immunization and

RAPID DEVELOPMENT

specific treatment of certain highly infectious diseases, has made rapid development during the past two decades. Active immunization with bacteria, or their products, has come into general use, not only as a preventive measure, but as a cure of infectious diseases. To-day the rationale of vaccine and serum therapy has become so firmly established that a large number of biological products find a place in the armamentarium of the progressive physician.

THE SQUIBB BIOLOGICAL LABORATORIES

The Squibb Biological products are scientifically prepared in the new Squibb Research and Biological Laboratories at New Brunswick, N. J. These are elaborately equipped with the most up-to-date apparatus, and the scientific appointments, under the direct supervision of Dr. JOHN H. ANDERSON, formerly Director of the Hygienic Laboratory, U. S. Public Health Service, are second to none in the country.

The Squibb *Vaccines* are prepared under the most improved scientific methods. The stock vaccine is a product of many strains of each organism. Vaccines are of the greatest value in localized infections. Their action extends to cells remote from the seat of infection, stimulating them, too, to generate antibodies, which the blood current brings to the area of infection.

THE SQUIBB SERUMS AND VACCINES

The Squibb *Serums* are of high concentration, small in bulk, and high in potency and efficiency and low in solids. They are all tested with the most meticulous care by biologic laboratory experts. The clinical effect of each physiologically tried out on the specific disease for which it is prepared as a curative agent. The Squibb *Vaccines* are marketed in aseptic ampuls, accompanied by a syringe for each package. The antitoxins and serums, with the exception of the

anti-meningitic serum, are distributed in special aseptic syringes.

ANTI-MENINGITIC SERUM SQUIBB IN GRAVITY APPARATUS

The Anti-Meningitic Serum is prepared for administration in a special *gravity* apparatus, which has the advantage of supplying the serum in a sterile container always ready for use

by the gravity method which lessens the danger to shock.

Specify "SQUIBBS" when ordering biological products, and thus insure results.

Food Allergens Squibb

DEFINITION Allergy is hypersensitiveness of the system to some material introduced into it. Allergy to foods, or food poisoning, or food idiosyncrasy, as it

is sometimes called, is a hypersensitiveness to the proteins which enters into the ordinary diet of the individual. It is due, probably, to a previous sensitization of the individual by certain proteins, and thus is a form of anaphylaxis.

MANIFESTATION Food allergy may manifest itself in a great many ways, e.g., by the appearance of eczema, asthma, urticaria, complicated vasomotor disturbances of the larger air passages, cardio-vascular conditions involving the kidneys, and in many other ways.

It has been known for some time that egg white, shellfish, pork, cow's milk, woman's milk, strawberries, barley, oatmeal, and a large number of other food substances cause, in some persons, a disturbance sufficiently marked to demand remedial attention.

DIAGNOSIS In the treatment of food allergy the first important step is to determine what food or foods cause the systemic disturbance. This can be done

by inoculating the patient with several possible food allergens and the specific food protein will manifest itself by a reaction at the site of inoculation as described below. Of course, the food protein used for diagnosis must be pure.

HOW TO INOCULATE

To make the inoculation it is necessary only to wash the inner surface of the forearm with sterile water or physiological salt solution, avoiding the use of alcohol, ether, or any other antiseptic solution. A slight scarification should be made, which should penetrate only the outer layers of the skin, great care being taken not to draw any blood. If now upon the scarified spot a small amount of the offending food protein be placed, together with a drop of sterile water, a reaction will take place at the site of the inoculation, which will manifest itself by the appearance of a distinct urticarial wheal within five minutes to half an hour. It is always best to make a control scarification on which merely the physiological salt solution or the sterile water should be placed. No untoward results follow such inoculation if it is made properly.

TREATMENT

To remove the hypersensitiveness to a protein, either the specific protein may be eliminated from the diet, or immunization may be brought about by feeding the patient with small amounts of the anaphylactogenic substance until he becomes fully desensitized.

SQUIBB FOOD ALLERGENS

The Squibb Laboratories now produce potent food allergens in large variety, the following being a partial list. A complete list may be had upon application. *Milk*—Cow's milk (all proteins), cow's milk casein, cow's milk albumin, cow's milk globulin, human milk. *Egg*—Egg (all proteins), Egg white (all proteins), egg albumin, egg yolk (all proteins), egg yolk globulin. *Cereals*—Barley, rice, wheat, corn, rye, oat. *Beverages*—Coffee, tea, cocoa. *Vegetables*—Navy bean, lima bean, pea, asparagus, spinach, white potato, sweet potato, carrot, turnip, tomato, squash. *Fruit*—Orange, strawberry, blackberry, raspberry, cherry, peach, plum, prune, banana, watermelon, canteloupe. *Meat*—Beef, lamb, mutton, veal, pork, chicken, horse. *Sea Foods*—Codfish, salmon, lobster, crab, oyster, clam. *Nuts*—Peanut, chestnut, English walnut, black walnut, hickory nut, pecan, almond, butternut, Brazil nut.

Squibb's Anæsthetics

The Squibb line of anæsthetics include Ether, Chloroform, Ethyl Chloride, and Ethyl Bromide. Each is made in one quality only, the best possible for anæsthesia, so when "Squibb's" is had, there is no danger from an inferior product.

Ether Squibb is made only in the Squibb Laboratories by a process devised by Dr. E. R. Squibb and long since brought to practical perfection. Its physical and chemical characteristics were determined by exhaustive clinical experimentation. Thus the Squibb Ether has always proved itself the best for anæsthesia and been recognized as the standard.

Chloroform Squibb is made in the Squibb Laboratories by the Squibb process and purified by a special process devised by Dr. E. R. Squibb. The outcome of these processes is a chloroform in vital respects superior to the chloroform of the U. S. P. No better chloroform for anæsthesia can be made than Chloroform Squibb.

Ethyl Chloride Squibb is pure. This is necessary if it is for anæsthesia by inhalation. In order that no mistake be possible, Ethyl Chloride Squibb, like all other products of the Squibb Laboratories, is made in one quality only. This is put up in glass tubes to prevent decomposition, which invariably takes place in a metal container. These tubes are of two kinds: one delivering a quantity of ethyl chloride sufficient for producing *general* anæsthesia, but too large a quantity for freezing; the other delivering a quantity the most economical and otherwise the most satisfactory for freezing as a *local* anæsthetic, but too small an amount for general anæsthesia. In ordering, the purpose for which the product is intended should be mentioned, although the quality of ethyl chloride is the same in both cases.

Ethyl Bromide Squibb is made with the same care as are the other Squibb anæsthetics, and requires no more extended description than is found on page 78 of this *Materia Medica*.

The Medical Department of E. R. Squibb & Sons has prepared several monographs on inhalation anæsthesia, copies of which may be had by physicians upon their request.

Squibb's Milk Sugar

Specially prepared and purified for the home modification of milk for infant feeding. It is obvious that for so

FOR INFANT
FEEDING

important a purpose as infant feeding, nothing but the very highest quality of Milk Sugar should be used; and such is

Squibb's. It is added not merely to sweeten the food and render it more palatable, but to furnish the proper proportion of soluble carbohydrates necessary for the infant's nutrition and growth.

Cow's milk contains between $2\frac{1}{2}$ and 4 per cent. of proteins, and about $4\frac{1}{2}$ per cent. of milk sugar; woman's milk contains only $1\frac{1}{2}$ per cent. of proteins and 7 per cent. of milk sugar. Hence in cow's milk there is an excess of proteins and a deficiency of milk sugar. It is therefore necessary to dilute the cow's milk, in order to diminish the protein content (for it is the proteins that cause much of the trouble to the infant's digestion); but this dilution also lowers the percentage of milk sugar, thus further increasing the original deficiency of this constituent. Hence the necessity for the addition of

FREE FROM
BUTTER-FAT,
STARCH AND
CANE SUGAR

milk sugar. *Squibb's* milk sugar is perfectly free from butter-fat, starch and cane sugar, which are very liable to produce gastric fermentation; and it is also free from

acids and other foreign substances that might prove injurious to the infant. *Squibb's* Milk Sugar is in the form of an impalpable powder, having been bolted through a No. 120 silk bolting cloth; and it exceeds the most exacting recognized tests for purity.

Inasmuch as milk sugar readily absorbs odors and moisture, and in consequence hereof becomes contaminated and unfit for use, the *Squibb* product is offered only in *sealed tins*, in 1-lb. and $\frac{1}{4}$ -lb. sizes, and not in paste-board boxes.

Directions for preparing modified milk are printed on the cans. Specify *Squibb's* when ordering milk sugar, and thereby insure obtaining a product of the greatest merit and reliability.

Squibb's Digitalis Products

The Squibb Laboratories make use of only the choicest and most carefully cured Digitalis leaves. This is evidenced by the beautiful green color of the Squibb fluid-extract and tinctures. Each shipment of leaves is carefully examined by our expert pharmacognosists, and its freedom from admixture with foreign leaves and other adulterants is assured. After the leaves have passed this examination, a liberal sample of it is made into the official tincture and is then tested physiologically according to the method outlined in the U. S. P. If the finished drug does not admirably come up to the official standard in every respect, the entire lot of leaves is rejected. As a rule, the leaves accepted by the Squibb Laboratories are much more active than the Pharmacopœia demands and the preparations made from them are carefully adjusted to a potency of 25 per cent. above the official standard. In this way full activity and uniformity of strength are assured for such an important product as Digitalis.

Tincture Digitalis Squibb is assayed not only by the U. S. P. method, as mentioned above, but its activity is also determined by the "cat method" thus giving a double check on its physiological activity.

Fluid Extract Digitalis Squibb is biologically assayed by the same double checking system as the tincture just mentioned.

A *Fat-free Tincture Digitalis* is supposed to be borne better by the stomach than is the ordinary tincture, therefore the Squibb Laboratories make a fat-free tincture, which should be specified if desired. It is prepared from leaves from which the fat has been removed by a method which does not extract or otherwise interfere with any of the proximate principles. It is of the same strength as the U. S. P. tincture, and is physiologically tested by the Hatcher "cat method" and adjusted so that each mil (Cc.) represents one cat unit (Hatcher's standard).

Whole, Ground, or Powdered Digitalis leaves, and a Soft and a Powdered *Extract Digitalis*, are also offered under the Squibb label.

For complete descriptions see Digitalis, Extract Digitalis, Fluidextract Digitalis and Tincture Digitalis titles in Part I of this MATERIA MEDICA.

Squibb's Household Products

There are many articles of a medicinal and semi-medicinal nature for which employment is found in every household. For the toilet there are numerous articles whose quality should be of the best; while for general household purposes—cooking, milk modification, disinfection, etc.—the purest and best articles are needed. The following products are well known for their purity, uniformity and efficiency:

Squibb's Baking Powder. Absolutely pure, very active, hence economical to use.

Squibb's Cold Cream. A superior product, safe to use wherever Cold Cream is required.

Squibb's Milk Sugar. Exceptionally pure; fine powder. Especially designed for milk modification.

Squibb's Olive Oil. Best Virgin; free from adulterants; brilliant, and of most agreeable taste.

Squibb's Pure Spices. Of absolute purity, hence of unusual strength.

Squibb's Castor Oil. Scarcely any unpleasant taste because of its purity; well borne, effective.

Squibb's Cod Liver Oil. Cold pressed "shore" oil; almost free from disagreeable odor and taste.

Squibb's Benzoinated Cream. A healing salve for chafed surfaces, sunburn, cracked lips, etc.

Squibb's Flexible Collodion. Liquid Court-Plaster. Impervious coating for cuts; does not crack.

Squibb's Magnesium Sulphate. Repurified; a distinctive quality with hardly any bitterness.

Squibb's Sodium Bicarbonate. Highest purity, hence bitterless and efficient.

Squibb's Sodium Phosphate. Arsenic-free, therefore may be taken freely and often, without harm.

Squibb's Solution Hydrogen Peroxide. Of exceptional strength and keeping qualities.

Squibb's Talcum Powder. Of correct composition; free from starch, chalk, and other foreign substances; impalpable, neutral, non-irritating.

Squibb's Zinc Stearate. Antiseptic, water-shedding dusting powder for infants as well as adults. Scarcely visible when applied.

Squibb's Olive Oil

It is not generally known that much of what is sold as "Olive Oil" or Salad Oil is nothing but cotton-seed oil without even a trace of olive oil in it; and mixtures of olive oil with cotton-seed or peanut oil are brazenly offered as pure olive oil.

ABSOLUTELY PURE VIRGIN OIL

Squibb's Olive Oil is guaranteed absolutely free from adulteration and meets the most rigid known tests for perfect purity as well as regards physical characteristics. It is the very best quality of what is known as Virgin Olive Oil; that is, the *first* oil that exudes on subjecting the olives to *gentle* pressure, this portion representing the best, the most palatable and the most nutritious oil. Only the full grown, perfectly sound olives of the proper blackish-violet color are used, all bruised, decayed or otherwise unsound fruits being rejected. Squibb's Olive Oil is therefore a brilliant oil of greenish-yellow color, and most pleasant, nutty taste.

PROMPT RESTORER OF THE OPSONIC INDEX

Recently olive oil has come into prominence as an efficient means of quickly restoring the opsonic index after surgical anæsthesias. For this important purpose only a perfectly pure quality such as Squibb's answers; an article laden with stearins and other heavy impurities is but slowly absorbed and therefore means loss of precious time. Why take any risks?

Squibb's Olive Oil is put up in special bottles of 1 pint, $\frac{1}{2}$ pint and $\frac{1}{4}$ pint—full measure, and can be obtained in these original packages at all first class drug stores. It should be kept in a cool place as all pure olive oil solidifies at $0^{\circ}\text{C}.$; gentle heat will restore its fluidity.

AN INTEREST- ING TREATISE

An interesting monograph entitled "Surgical Anæsthesia in its Relation to Immunity," giving a statement of recent findings concerning olive oil as a speedy restorer of the patient's power to resist infection, will be mailed to physicians on application.

Barium Sulphate Squibb

For X-Ray Work

Formerly Barium Sulphate was used only in the arts, and not in or on the human body. However, latterly it has been brought forward for use in taking X-Ray pictures of the stomach and of the intestines. Of course, for this purpose only a specially prepared quality is eligible, one of which is absolutely free from soluble barium salts so as to be wholly without toxic action. Such a product is Barium Sulphate Squibb for X-Ray work. This is prepared from highly pure materials and most carefully tested chemically and spectroscopically for perfect freedom from soluble barium salts and other possibly harmful impurities.

Barium Sulphate Squibb for X-Ray Work occurs as an extremely fine, white, odorless, tasteless and relatively light powder, which is insoluble in water and the organic solvents as well as in acids and in dilute alkalies. It therefore passes through the system wholly unchanged and unabsorbed, and as it is absolutely free from soluble salts there is no possibility of untoward action.

Barium Sulphate Squibb is used in 10 to 50 per cent. mixtures for X-Ray esophageal and gastro-intestinal examinations. A suitable test meal for examination of the stomach and intestines consists of a mixture of Barium Sulphate Squibb 5 oz., sugar $\frac{1}{2}$ oz., cocoa $\frac{2}{3}$ oz., cornmeal $\frac{1}{2}$ oz. and water 7 fl. oz. The sulphate may be considerably increased if necessary.

It is also employed in opaque enemas where shadow pictures of the colon and intestines are desired. Such an enema should be non-irritating to the bowel; sufficiently large to fill the entire bowel; fluid enough to flow freely and fill recesses, yet sufficiently thick to hold the barium in good suspension.

In view of the fact that many grades of Barium Sulphate on the market contain soluble barium salts and are hence dangerous to use, care should be taken to clearly specify and accept only Barium Sulphate Squibb for X-Ray work.

Squibb's Magnesia Magma

(MILK OF MAGNESIA SQUIBB)

Squibb's Magnesia Magma is an official product containing only the pure magnesium hydroxide, in the percentage specified in the U. S. P. suspended in water and conforming in all respects to the chemical and physical tests laid down by that authority, but is superior to the U. S. P. and most magnesia magmas as shown below.

The Squibb Magnesia Magma is made from the highly purified Magnesium Sulphate Squibb while the U. S. P. product is made from U. S. P. grade Magnesium Carbonate. Both processes produce the hydrated magnesium oxide but the Squibb product finishes velvety smooth while others are distinctly gritty.

Again, the Squibb product has but a slight alkaline taste while the U. S. P. article and most other market varieties have a pronounced alkaline taste. Two prominent factors contribute to these distinct advantages of the Squibb Magnesia Magma over others. In its manufacture only chemicals of Squibb purity are used and, again, the process is carried out under the most exacting conditions and with complete control from first to last. The elegance of the product shows the result.

It is much used by adults for fermentative dyspepsia, quickly correcting conditions arising from excessive acidity, and for the colic of infants it is almost a specific. It will maintain a continuous alkaline condition in the mouth and hence is much in favor as a dentrifice overcoming any acidity present in the mouth and dental interspaces, and thus protecting the teeth against untimely decay. Therefore in rational therapeutics it is indicated in erosion, for gingival caries, in tooth caries of pregnancy, and all oral pathological conditions due to hyperacidity of the mouth secretions, whether of local or systemic origin.

Squibb's Magnesia Magma is offered in $\frac{1}{2}$ pint and in 1 pint bottles, its continued use will demonstrate that it is a highly superior product.

Squibb's Testing Apparatus

It does not seem to be generally known that E. R. Squibb & Sons make several convenient and inexpensive pieces of apparatus for use of physicians and pharmacists. They are briefly described below.

SQUIBB'S IMPROVED APPARATUS STAND

This apparatus stand has been in use in the Squibb Laboratories for years and has proved very satisfactory. It consists of a nickel-plated upright rod, secured in an iron cylinder base. Its advantages are its stability, neat appearance and compactness. The usual attachments are supported by the rod. Price \$2.30.

SQUIBB'S SPECIFIC GRAVITY APPARATUS

Supplied in a neatly packed case and consists of a thermometer, hydrometer (urinometer), urine jar or tube, and litmus paper. The urinometer is adjusted to read accurately without corrections at the convenient temperature of 25° C. Temperature corrections can easily be made however as shown in the accompanying directions. The complete outfit is supplied for \$2.25.

SQUIBB'S SUGAR TESTING OUTFIT

This consists of the necessary solutions, tubes and pipette for performing Fehling's sugar test—usually used on urine samples. It comprises 50. mils (Cc.) each of copper sulphate solution and alkaline tartrate solution, together with two test tubes and a 1 mil pipette; all packed in a pasteboard case. Full directions are enclosed. The set supplies sufficient fluid for several tests and extra solutions can be obtained of E. R. Squibb & Sons as found necessary. Price \$1.00.

SQUIBB'S UREA APPARATUS

This apparatus consists of the necessary pieces and solutions for the quantitative estimation of urea by the hypobromite method (or hypochlorite method if preferred). The parts are complete and compact and sufficient solution is supplied for several tests. Extra solutions may be obtained of E. R. Squibb & Sons if desired. Price \$2.45.

Please Remember

That the SQUIBB products cost no more than other makes, except in very few instances, where a slight advance over ordinary market prices is charged for the reason that it is impossible to furnish the Squibb Quality at a price lower than that we make at time of delivery.

That the SQUIBB products are readily obtainable under the original Squibb label in all parts of the United States at the prices and in the subdivisions named in the foregoing pages.

That the SQUIBB products are carried in stock by wholesale houses everywhere, and can be supplied by the jobbers as promptly as any other brand.

Therefore, if you prefer SQUIBB'S to other makes, do not hesitate to demand it, wherever you may be located; and see to it that your specification is obeyed. Your active cooperation will be greatly appreciated by
